

Minute No. 64

**Report - Standing Policy Committee on Infrastructure Renewal and Public Works –
November 13, 2007**

**Item No. 2 2008 Water and Sewer Utility Rates
 File WW-2.3**

COUNCIL DECISION:

Council concurred in the recommendation of the Executive Policy Committee, as amended, and adopted the following:

1. That effective January 1, 2008 the water rates, based on water used, be increased as follows:

to \$3.45 from \$3.15 per 100 cu. ft. from 0 - 9,600 cu. ft./quarter (Block 1)
to \$2.97 from \$2.67 per 100 cu. ft. from 9,601 - 96,000 cu. ft./quarter (Block 2)
to \$2.49 from \$2.19 per 100 cu. ft. over 96,001 cu. ft./quarter (Block 3).
2. That effective January 1, 2008 the sewer rates, based on water used, be increased to \$5.12 from \$4.46 per 100 cubic feet, which includes 31.3 cents per 100 cubic feet for the Environmental Projects Reserve (31.3 cents in 2007).
3. That funding for Watermain Renewals be increased by \$3 million per year, effective, January 1, 2008 funded on a pay as you go basis from the water rates.
4. That the additional fees and charges as outlined on Appendix G to the report of the Winnipeg Public Service dated October 15, 2007 be approved effective January 1, 2008.
5. That the City Solicitor/Manager of Legal Services be instructed to prepare the necessary By-laws for submission to Council before December 31, 2007.
6. That Council commit to end net general revenue transfers from the Water and Sewer Utilities no later than the date of adoption of the 2009 Operating Budget, and do so in a manner that improves the transparency of revenues and expenditures within these utilities.
7. That the Proper Officers of the City be authorized to do all things necessary to implement the intent of the foregoing.

**Report - Standing Policy Committee on Infrastructure Renewal and Public Works -
November 13, 2007**

DECISION MAKING HISTORY:

Moved by His Worship Mayor Katz,

That the recommendation of the Executive Policy Committee be adopted.

In amendment,

Moved by His Worship Mayor Katz,

Seconded by Councillor Clement,

WHEREAS Mayor Katz committed in his election platform of 2004 to end the longstanding practice of transferring funds to general revenue from the water and sewer utilities, and committed to bring these utilities to a position where their rates could be subject to a standard Public Utility Board review if desired;

AND WHEREAS a more transparent policy on such transfers is consistent with other financial initiatives taken since 2004 that have added, not reduced, pressure on the operating budget, including (but not limited to) review of Special Operating Agency dividend policies, review of inaccurate photo radar projections made earlier in the decade, and an end to over-optimistic budgeting of police overtime;

AND WHEREAS the Provincial government stands by its order to complete the CEC's recommendations approximately five times faster, and with minimal outside financing than the CEC recommended, which will continue to put pressure on Water and Sewer Utility rates for the foreseeable future;

THEREFORE BE IT RESOLVED THAT an additional recommendation be added to Item 2 of the Report of the Standing Policy Committee on Infrastructure Renewal and Public Works dated November 13, 2007 which states:

"That Council commit to end net general revenue transfers from the Water and Sewer Utilities no later than the date of adoption of the 2009 Operating Budget, and do so in a manner that improves the transparency of revenues and expenditures within these utilities."

**Report - Standing Policy Committee on Infrastructure Renewal and Public Works -
November 13, 2007**

DECISION MAKING HISTORY (continued):

In amendment,

Moved by Councillor Vandal,
Seconded by Councillor Thomas,

WHEREAS the Provincial government have announced 206 million dollars of support for Winnipeg Wastewater Improvements as mandated by the Clean Environment Commission in 2003;

AND WHEREAS this financial support will significantly ease the financing burden of the entire wastewater improvements;

THEREFORE BE IT RESOLVED THAT the 2008 Water and Sewer rates be referred back to the Standing Policy Committee of Infrastructure and Public Works for alternative financing options to the benefit of the taxpayer.

The motion to refer with instructions was put.

Councillor Gerbasi called for the yeas and nays, which were as follows:

Yea: Councillors Browaty, Gerbasi, Pagtakhan, Smith, Thomas and
Vandal. 6

Nay: His Worship Mayor Katz, Councillors Clement, Fielding, Leipsic,
Nordman, O'Shaughnessy, Steeves, Swandel, Wyatt and Lazarenko. 10

and the motion to refer with instructions was declared lost.

Report - Standing Policy Committee on Infrastructure Renewal and Public Works - November 13, 2007

DECISION MAKING HISTORY (continued):

The amendment proposed by His Worship Mayor Katz and Councillor Clement was put.

Councillor Gerbasi called for the yeas and nays, which were as follows:

Yea: His Worship Mayor Katz, Councillors Clement, Fielding, Leipsic, Nordman, O'Shaughnessy, Steeves, Swandel, Wyatt and Lazarenko. 10

Nay: Councillors Browaty, Gerbasi, Pagtakhan, Smith, Thomas and Vandal. 6

and the motion proposed by His Worship Mayor Katz and Councillor Clement was declared carried.

The motion for adoption of the item, as amended, was put.

Councillor Gerbasi called for the yeas and nays, which were as follows:

Yea: His Worship Mayor Katz, Councillors Clement, Fielding, Leipsic, Nordman, O'Shaughnessy, Steeves, Swandel, Wyatt and Lazarenko. 10

Nay: Councillors Browaty, Gerbasi, Pagtakhan, Smith, Thomas and Vandal. 6

and the motion for adoption of the item, as amended, was declared carried.

EXECUTIVE POLICY COMMITTEE RECOMMENDATION:

On November 14, 2007, the Executive Policy Committee concurred in the recommendation of the Winnipeg Public Service and submitted the matter to Council.

STANDING COMMITTEE RECOMMENDATION:

On November 13, 2007, the Standing Policy Committee on Infrastructure Renewal and Public Works submitted the matter to the Executive Policy Committee and Council without recommendation.

Re: 2008 WATER AND SEWER UTILITY RATES

FOR SUBMISSION TO: Standing Policy Committee on Infrastructure Renewal and Public Works

ORIGINAL REPORT SIGNED BY: Barry MacBride, P. Eng.
Director of Water and Waste Department

REPORT DATE: October 15, 2007

RECOMMENDATION(S):

It is recommended that

1. Effective January 1, 2008 the water rates, based on water used, be increased as follows:

to \$3.45 from \$3.15 per 100 cu. ft. from 0 - 9,600 cu. ft./quarter (Block 1)
to \$2.97 from \$2.67 per 100 cu. ft. from 9,601 - 96,000 cu. ft./quarter (Block 2)
to \$2.49 from \$2.19 per 100 cu. ft. over 96,001 cu. ft./quarter (Block 3)
2. Effective January 1, 2008 the sewer rates, based on water used, be increased to \$5.12 from \$4.46 per 100 cubic feet, which includes 31.3 cents per 100 cubic feet for the Environmental Projects Reserve (31.3 cents in 2007).
3. Funding for Watermain Renewals be increased by \$3 million per year, effective, January 1, 2008 funded on a pay as you go basis from the water rates.
4. The additional fees and charges as outlined on Appendix G be approved effective January 1, 2008.
5. The City Solicitor be instructed to prepare the necessary By-Laws for submission to Council before December 31, 2007.

Report Summary

KEY ISSUES:

- The Department is recommending an increase in the water and sewer rates in 2008. A typical residential customer will see an annual increase to the utility bill of \$80.64, from \$694.24 in 2007 to \$774.88 in 2008 (an impact of 11.6%).

- The combined 2008 rate increase (water and sewer) is unchanged from the 2008 projection made in 2007.
- The capital and operating cost projections for the wastewater improvement program remain consistent with 2007 projections. There has been no relief from the cost escalation experienced in 2007, nor any further progress in securing additional funding from the provincial or federal governments beyond the \$50 million to be received under the Canada Strategic Infrastructure Fund.
- For comparison, the combined water (Block 1) and sewer rate of \$8.57 per 100 cubic feet is the equivalent of \$13.76 per 1,000 gallons or \$3.02 per 1,000 liters (3.31 liters per penny).

IMPLICATIONS OF THE RECOMMENDATION(S):

General Implications

- | | |
|-------------------------------------|---|
| <input type="checkbox"/> | None |
| <input checked="" type="checkbox"/> | For the organization overall and/or for other departments |
| <input checked="" type="checkbox"/> | For the community and/or organizations external to the City of Winnipeg |
| <input type="checkbox"/> | Involves a multi-year contract |

Comment(s): A typical residential customer will see an annual increase to the utility bill of \$80.64, from \$694.24 in 2007 to \$774.88 in 2008.

Costs for the wastewater program could be higher as detailed cost estimates have not yet been prepared for the SEWPCC or NEWPCC Biological Nutrient Removal, Biosolids, or Combined Sewer Overflow Mitigation programs.

Two new fees are proposed as part of a longer term plan to have full cost of service recovery for all miscellaneous services provided by the Water and Sewer utilities

Policy Implications

- | | |
|-------------------------------------|-----|
| <input checked="" type="checkbox"/> | No |
| <input type="checkbox"/> | Yes |

Comment(s):

Regulatory Implications

- | | |
|-------------------------------------|---|
| <input checked="" type="checkbox"/> | None |
| <input type="checkbox"/> | Eliminates or reduces regulatory impact |
| <input type="checkbox"/> | Proposes regulatory impact |

Comment(s):

Environmental Implications

- No
- Yes

Comment(s): Includes improvement in the City's water and wastewater systems.

Human Resources Implications

- No
- Yes

Comment(s):

Financial Implications

- Within approved current and/or capital budget
- Current and/or capital budget adjustment required

Comment(s):

REPORT

REASON:

Changes to the Water and Sewer rates require Council approval in the form of a by-law.

HISTORY:

See Appendix A for the history of Water and Sewer rates for the past ten years.

2005 On November 23, City Council approved an increase in the sewer rate, over-strength wastewater surcharge rates for Biochemical Oxygen Demand (BOD) and Total Suspended Solids (TSS), and additional fees and charges for 2006.

2006 On November 21, Standing Policy Committee on Infrastructure Renewal and Public Works received as information a report detailing the 2006 Update on Wastewater Treatment Systems Improvements – Status and Costs Estimates.

2006 December 6, City Council approved an increase in the water rate and additional fees and charges for 2007. Council recommended the sewer rate increase be laid over.

2007 February 21, City Council approved an increase in the sewer rate effective April 1, 2007.

DISCUSSION:

The Department's recommended increase in the utility rates over the next ten years is to support capital projects and operating costs for new facilities mandated by the Province of Manitoba under the Environmental Act licenses. The recommended rate increases are unchanged from the 2007 financial model.

Accomplishments

The \$300 million water treatment plant is at the 50% stage of construction and will be complete in late 2008 or early 2009. The plant is currently one of the largest construction projects in Manitoba. The final plant will be larger than the MTS Center.

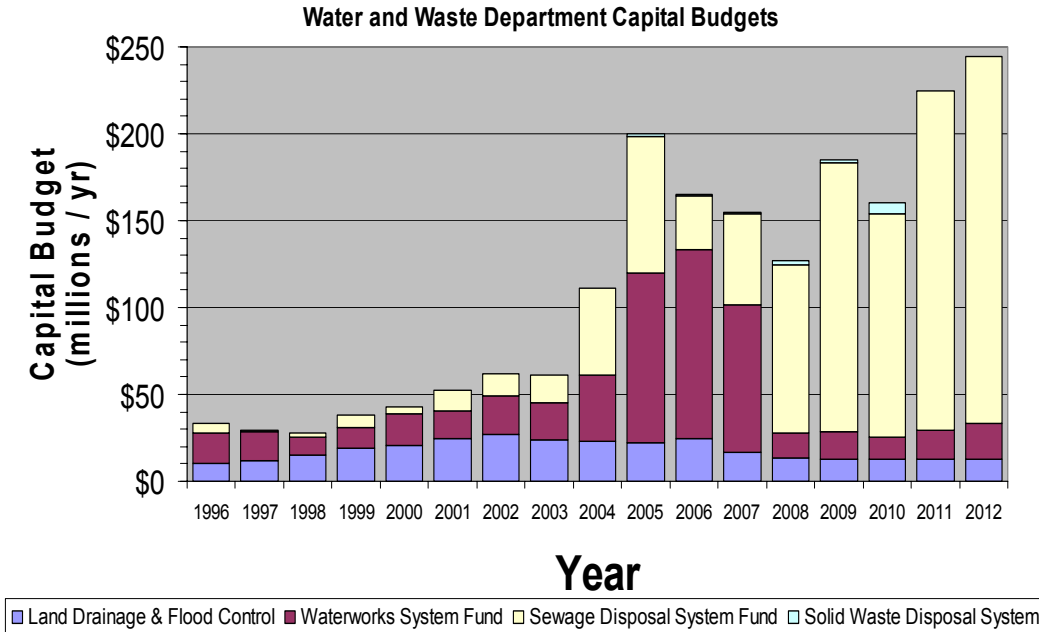

There has been significant progress in the wastewater improvements since the Clean Environment report in 2003.

- Ultraviolet disinfection is complete at the North End Water Pollution Control Center (NEWPCC).
- Phosphorus removal is in place at both the NEWPCC and the West End Water Pollution Control Center (WEWPCC).
- Winnipeg is the first municipality in Manitoba to actually reduce phosphorus loads to Lake Winnipeg.
- Construction is ongoing to reduce ammonia and nitrogen from the NEWPCC centrate and the WEWPCC with completion expected at the end of 2008.

These projects are resulting in increased operating costs for the utilities.

New Facilities

The huge rise in the utilities’ capital and operating programs are impacting rates. The Department’s capital budget has increased significantly in recent years and will continue into the future, as illustrated by the following chart:

As well, the local construction market has had huge inflationary increases in the past few years. Local industry indicates that the active market that is driving this period of high inflation will continue for at least another five years. This cost escalation is factored into the capital program and the financial projections for both the water and sewer utilities.

However, the Department has not tried to anticipate escalation beyond existing market inflation. In the current climate, even with inflation factored in, cost estimates are subject to change - until tenders are issued and bids awarded the risk of additional cost increases remains high. As well, there are many projects that have not yet commenced so cost estimates are very preliminary.

In response to rising costs, the Department has been monitoring market conditions to determine project delivery methods that will minimize cost impact including examining the feasibility of a private-public partnership as a project model for the South End Water Pollution Control Centre expansion.

Typically the Water and Sewer Utilities maintain a minimum working capital reserve of 11% of the combined Water and Sewer sales. This is to protect the Utilities' financial position, prevent significant rate fluctuations, provide medium-term stability and absorb losses in any given year that may otherwise result from a decline in consumption or major unforeseen expenditures. Because of the volatile construction market and the enormous capital program in the next few years, the rates plan for a higher combined working capital in future years to protect against large cost increases and further cost escalation.

Water Rate

Water rates are proposed to increase effective January 1, 2008.

- \$3.45 from \$3.15 per 100 cu. ft. from 0 - 9,600 cu. ft./quarter (Block 1)
- \$2.97 from \$2.67 per 100 cu. ft. from 9,601 - 96,000 cu. ft./quarter (Block 2)
- \$2.49 from \$2.19 per 100 cu. ft. over 96,001 cu. ft./quarter (Block 3)

Contributions to the Water Treatment Reserve will end December 31, 2007 (40.6 cents in 2007).

The proposed water rate increase is unchanged for 2008. The forecasted water rate for 2009 onward is higher than previous years' projections due to additional funding requirements for the watermain renewal program, as an additional \$3 million per year retained earnings funding has been allocated for the watermain renewal budget. Historically watermain renewals have been funded solely by frontage levies. Frontage levies have not increased since 2002 and escalation of construction costs over the last few years has surpassed any additional frontage. This has caused the department to fall behind on the watermain renewal schedule the utility funding is intended to maintain the program funding.

Excessive inflation in some major operating costs such as gas, oil, light, power and chemicals has also increased the total cost of operations from the previous years' rate plan.

Sewer Rate

In 2008, the Department is proposing that the sewer rate increase from \$4.46 to \$5.12 per 100 cubic feet as projected in 2007. The sewer rate increases for 2008 onward have declined slightly from previous year's projections.

Market volatility continues to make it difficult to anticipate future capital costs. Two major projects, Combined Sewer Overflow Control (CSO) and Biosolids Management are still in the conceptual engineering stages creating uncertainty in the budget numbers. Until costs have been scoped and budgets refined the risk of capital costs escalating remains high.

Federal/Provincial Funding: \$50 million in funding under a federal-provincial infrastructure program is expected to be provided to the City of Winnipeg for wastewater system improvements. The Department is anticipating that the agreement will be finalized in 2007 and has included these funds in the sewer utility rate model. This funding will be distributed as eligible costs are incurred, over a 5 year period (2007, 2009 and 2010).

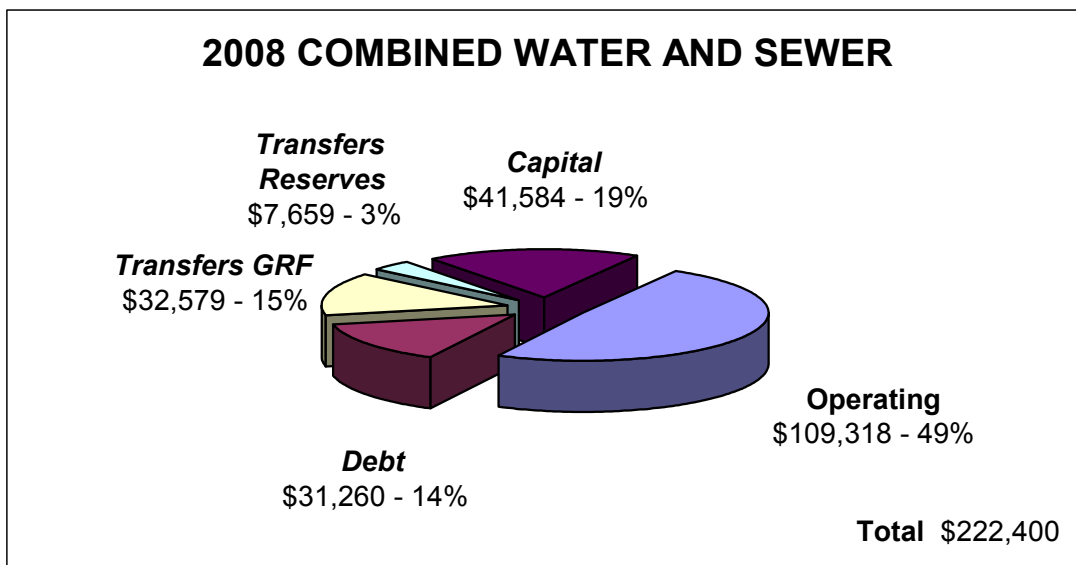

Combined Water and Sewer Rates

The 2008 water and sewer rate model projects increases to the combined water and sewer rate up to year 2011 at which point it is anticipated that the combined rate will be subject to only small inflationary increases. The combined rate of \$11.24 in year 10 is unchanged from 2007.

The combined water and sewer rate is proposed to increase in 2008, from \$7.61 to \$8.57 per 100 cubic feet. Individually the water rate increases from \$3.15 to \$3.45 while the sewer rate increases from \$4.46 to \$5.12 per 100 cubic feet. The total financial impact on a typical residential customer is an annual increase to the utility bill of \$80.64, from \$694.24 to \$774.88.

For 2008, the following represents the major cost categories contributing to the water and sewer rates. Total costs are forecast at \$222 million, including \$42 million for cash funded capital projects.

Fixed Quarterly Charge (FQC)

The FQC recovers the cost of meter reading, customer billing, accounts administration, and customer service centre support. Costs associated with the meter installation and maintenance are also recovered from the quarterly charge. No change is recommended for 2008 in FQC.

Reserves

The Department has established reserves to fund and plan for large and complex capital projects.

Water Treatment Plant Reserve: This reserve will fund a portion of the cost of a Water Treatment program. Total cost of the water treatment plant is estimated at \$300.1 million. Contributions to the reserve will end December 31, 2007 and depletion of the reserve will correspond with the amended project deadline of 2008. Debt financing requirements remain unchanged at \$164 million. The following table summarizes the timing of capital expenditures and financing plans.

Water Treatment Plant Financing Schedule \$000s

(actual to year ending December 31, 2005)

Year	Capital Expenditure	Project Funding				Balance	
		Volume Rate ¹	Retained Earnings	Debt	Total	Debt	Reserve
to 2003	4,144	82,092		-	82,092	-	77,948
2004	7,346	14,204		-	14,204	-	84,806
2005	23,936	12,810		-	12,810	-	73,680
2006	61,528	13,065		60,000	73,065	60,000	85,217
2007	100,000	11,127	2,800	50,000	63,927	110,000	-
2008	103,146	-		54,002	54,002	164,002	-
2009	-	-		-	-	-	-
Total	300,100	133,298	2,800	164,002	300,100		

¹ Includes Interest

Environmental Projects Reserve: The Environmental Projects Reserve will support the wastewater treatment improvement program as directed by Manitoba Conservation. Federal/Provincial funding of \$50 million over five years has been incorporated into the financing plan. In addition, under this rate plan, the Department will require borrowing authority for up to \$540.8 million in order to fully fund the improvements over the next 10 years.

**Sewer Utility
Environmental Projects and Financing Schedule \$000s**

Year	Annual Capital Expenditure ²	Project Financing					Balance

¹ Includes Interest

² Future costs are in 2006 dollars plus inflation

Transfers to the General Revenue Fund

In 2008, the water and sewer utilities' transfers to the General Revenue Fund (GRF) are estimated at \$32.5 million (\$31.3 million for 2007) or 16.4% of volume sales.

Transfers to the GRF include a percent of the utilities' base sales, subsidization of the tax-supported fire hydrant maintenance program and full subsidy for the tax-supported land drainage and flood control program, plus deficit avoidance contributions to general mill-rate programs.

Transfers to Capital Program

The utilities continue to employ a pay-as-you-go policy for ongoing infrastructure renewal programs. In 2008, the water utility will cash finance an estimated capital program of \$11.7 million, not including the Water Treatment Plant Reserve. The cash financed sewer capital program in 2008 is estimated at \$29.8 million, not including the Environmental Projects Reserve.

Schedule of Fees & Charges (Appendix G)

The sewer and water by-law, Schedules A and B, contain a number of fees and charges which have not been reviewed for several years. In 2005 the Department began a review of these fees and charges, implementing graduated increases toward cost of service recovery. The proposed increases are part of a longer term plan to have full cost of service recovery for all miscellaneous services provided by the Water and Sewer utilities. These fees are listed in Appendix G.

New Fees:

Appendix G also contains two new fees.

- **Backflow Preventer with Lockable Box:** This rental is a service provided to contractors and others who need a temporary water supply, such as a hydrant and don't have their own backflow preventer and are unable rent one from a local supplier. This device is mandatory to prevent the back siphoning of any harmful liquid or substance into the City's water system during the use of the temporary water supply.

The recommended fee:	Per Unit - per week	\$175.00
	Per Unit - per month	\$500.00

Other Fee Schedule Revisions:

- **Permit Fee – New Water Services:** Description is to be changed to “new/renewed/repaired” to more accurately reflect the application of the fee.
- **Sewer Contractor's License & Water Contractor's License:** Sections 21 and 16 of By-Laws 504/73, 7070/97. Fee is to be combined into one “Contractor's License Sewer & Water”. Contractors must obtain both licenses. It is not an option to purchase one license without the other. It has been determined that there is no value added in issuing two licenses. To simplify the process one license will be issued with the fee identified in both by-laws
- **Meter Test Fee:** To be added to Schedule B of By-Law 504/73. Customers can request testing of their water meter for a fee, which is currently listed in Schedule A of the Sewer by-law. The fee should also be disclosed in Schedule B of the Water by-law. The meter test fee is refunded if the meter does not test within the limits outlined by the American Waterworks Association.
- **Record Search Fees:** To be added to Schedule B of By-Law 504/73. Customers can request a water and sewer records search for a fee, which is currently listed in Schedule A of the Sewer by-law. The fee should also be disclosed in Schedule B of the Water by-law.

- Multiple Metering License: The description is to be changed to “*Multiple Metering Permit*”, as only the Water & Waste Department is licensed to install meters.
- Use of Fire Hydrants – Water Deposit: Presently a deposit of \$25 is required toward water used during a fire hydrant rental. On the final bill the deposit is put toward actual cost of water used. The average cost of water used during a hydrant rental is \$665.00. The current deposit is 4% of the average final billing. The Department recommends increasing the deposit to \$100 or 15% of the average final bill. The increase will reduce the Department’s risk related to collection of these billings.

Financial Projection Risks

The detailed financial projections and rate plans are contained in Appendices B (Water) and C (Sewer). There are several variables that can affect the financial projection and resulting water and sewer rates.

1. Consumption. Consumption is forecast to remain relatively constant over the next ten years. Consumption projections are based on a five year historical average and incorporate the assumptions found in the 2003 Water Treatment Plant Capacity Assessment report including marginal population growth offset by increased conservation and efficiencies for water usage. If actual consumption is less than plan, this could cause a rate increase (conversely, actual consumption greater than plan could effect a rate decrease). See Appendix D for six year history.
2. Frontage levy. Anticipated frontage levy funding of \$27 million per annum for the water main renewal and sewer system rehabilitation programs. Any reduction in frontage levy would require an increase in rates to maintain utility infrastructure as per the planned work schedule.
3. Working capital position. The utilities target to maintain a minimum combined working capital position of 11% of the combined water and sewer sales on an annual basis. The purpose of the working capital reserve is to provide medium-term stability and the ability to absorb losses in any given year when consumption falls short of anticipated levels and/or unforeseen emergency funds are required. The working capital reserve is comprised of current assets (cash and accounts receivable) net of current liabilities (current accounts payable), cash or near cash items that can readily absorb unexpected fluctuations. It is prudent to have a larger shock absorber under these conditions, where change is significant, costs are rapidly increasing and consumption sales will remain flat due to increasing utility costs for the customers.

4. Rate structure. The 2008 rate model does not contemplate any major changes to the existing rate structure. The Department will report on a cost-of-service rate model along with the effects of winter cost averaging for summer consumption once the implementation of a new billing system is complete.
5. Capital Investment. Capital investment is based upon the Department's best estimate of improvements that are required. Many items can influence the capital program expenditures, including escalation in market price, the introduction of new technology and availability of consultant and contractor resources. Recent tenders confirm these risks as the latest estimates reflect increasing costs.
6. Economic development. The City's economic climate can have significant impact on the utilities' financial plan. The addition or deletion of a major customer could effect a change in rates due to the consumption and sales revenue associated with the utilities' large volume users.
7. New legislation. Environmental and public health concerns are driving more stringent standards in the water and wastewater industry. The Environment Act Licenses for the three water pollution control centers require huge increases in capital and operating costs. The further introduction of new legislation could cause increased rates through the operating and capital costs associated with compliance.
8. Market Forces. The construction and consulting community are operating at or near capacity.

The Water and Sewer Utilities adhere to a set of operating principles that can be found in Appendix E. Appendix F illustrates the impact of the rate strategy on various sample customers.

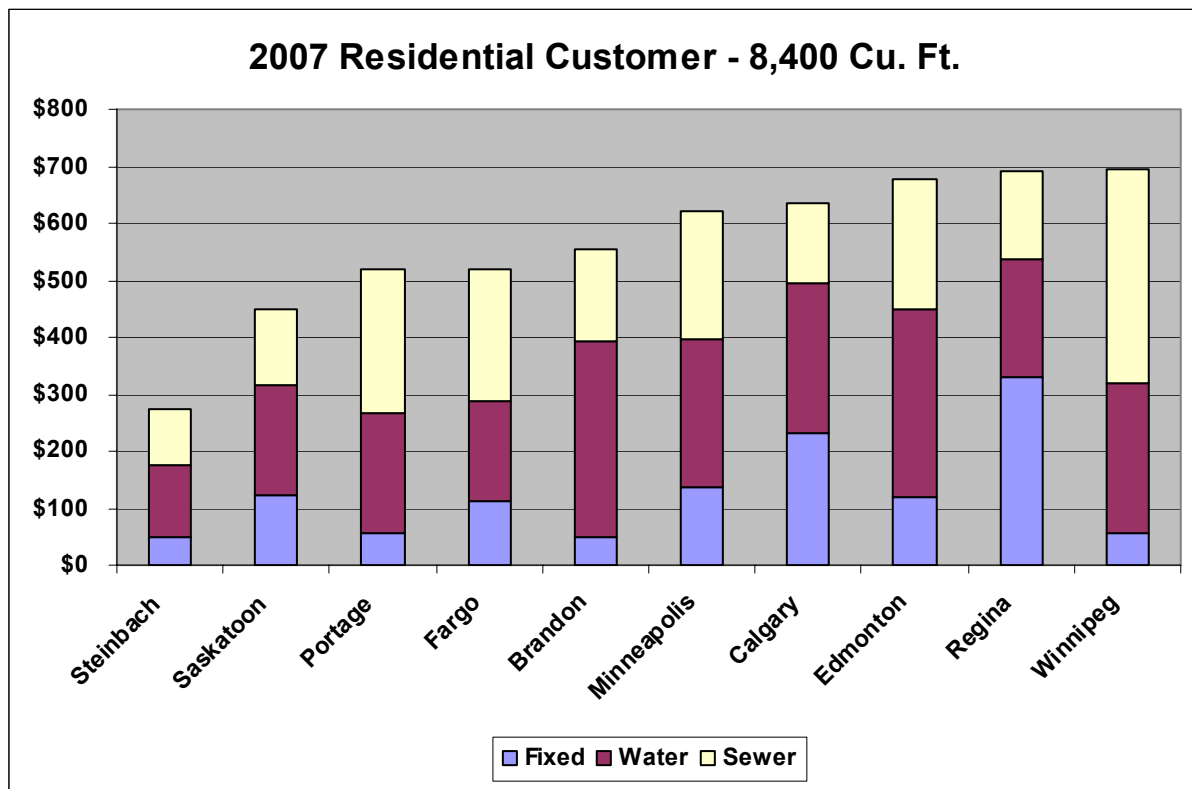

Competitiveness

In 2007 (after the last rate increase) Winnipeg's combined water and sewer rates are high. . While rates have increased across the majority of other cities surveyed, Winnipeg notably has the highest rates for residential customers. The following tables illustrate costs for residential customers (Block 1 rates, consumption of 8,400 cubic feet), commercial customers (Block 1 and 2 rates, consumption of 56,000 cubic feet) and large users (Block 1, 2 and 3 rates, consumption of 8,987,000 cubic feet) each in 2007 rates.

COMMUNICATION:

The Water and Waste Department will communicate the water and sewer rate increases to utility customers as follows:

Strategy	Timeline
Briefing session for Customer Service Centre Representatives	First week of December 2007
Ads in the business section of both daily newspapers	December 8 and 9, 2007
Post information on the Web site	First week of December 2007
Presentation on water and sewer rates at the annual Customer Seminar	Early December
Bill insert with water/sewer bills	January – March 2008

The Water and Waste Department will use notices to inform customers affected by the rate increases outlined in Appendix G.

FINANCIAL IMPACT:

The 2008 rates and financial plans for water and sewer and utilities are contained in Appendices B and C. These plans are reflected in the utilities' current and capital estimates and as such, a financial impact statement has not been prepared.

“Original signed by M. L. Geer, C.A.”
 Moira L. Geer, C.A.
 Manager of Finance and Administration

IN PREPARING THIS REPORT THERE WAS:**Internal Consultation With and Concurrence By:**

Internal Services, Legal Services Division

External Consultation With:**THIS REPORT SUBMITTED BY:**

Water and Waste Department
Finance and Administration Division
Prepared by: Moira Geer, Darlene Capp

APPENDICES:

The following appendices are attached as additional information:

- APPENDIX A Water and Sewer Rates - Ten Year History
- APPENDIX B Waterworks System Fund - Ten year financial projection of revenue, expenditures and working capital based on the recommendations contained in this report
- APPENDIX C Sewage Disposal System Fund - Ten year financial projection of revenue, expenditures and working capital based on the recommendations contained in this report
- APPENDIX D Water Consumption Five Year Historical Summary 2002 - 2006
- APPENDIX E Water and Sewer Utility - Principles of Operation
- APPENDIX F Impact of the Water and Sewer recommendations on sample customers January 1st, 2008
- APPENDIX G Schedule of Fees and Charges

Appendix A

Appendix E

**WATER AND SEWER UTILITY
PRINCIPALS OF OPERATION**

1. Self-Supporting Utilities. The Utilities do not receive subsidies from the mill rate.
2. Cost of Service Rates. Customers pay water and sewer rates, which represent the operating and capital costs of providing the utility services.
3. Debt Servicing. The Utilities' revenues are sufficient to service the Utilities' long-term debt.
4. Working Capital Reserves - Water and Sewer Utilities. The Water and Sewer Utilities maintain working capital reserves to protect the Utilities' financial position and prevent significant rate fluctuations that may otherwise result from a decline in consumption or major unforeseen expenditures. On an annual basis, the Utilities strive to maintain a minimum combined working capital position of 11% of the combined Water and Sewer sales.
5. Ten Year Financial Plan - Water and Sewer Utilities. Rates in the Water and Sewer Utilities are planned over a ten-year time frame to mitigate the effects of year over year fluctuations and to coincide with the longer term infrastructure development and renewal planning.
6. Transfers to the General Revenue Fund. The Water and Sewer Utilities transfer funds to the General Revenue Fund in the form of:
 - a percentage of sales revenue, net of capital reserves, as a return to the City on ownership of the Utilities
 - additional general provisions to meet the City's financial targets
 - support to the Fire Hydrant which funds 100% of the cost of this program
 - support to the Land Drainage program which funds 100% of the costs of this program. In addition the utility will fund all of the debt servicing costs in the Land Drainage program by the year 2008.

Capital Reserve Funds. The Utilities establish reserves to fund major capital projects. The pay-as-you-go capital program is more economical than traditional debt financing, which equates to lower rates for our customers. In addition, for specific and cost intensive projects, the Department has developed a strategy whereby a portion of the project is funded through reserves and a portion through debt financing. This strategy facilitates an equitable approach for short and long term funding support.
