**Please note the following and attached changes, corrections, additions, deletions, information and/or instructions in connection with the Request for Proposal, and be governed accordingly. Failure to acknowledge receipt of this Addendum in Paragraph 9 of Form A: Proposal may render your Proposal non-responsive.**

---

### PART D – SUPPLEMENTAL CONDITIONS

- Revise: 3.1 to read                      There are 34 landfill sites in the City of Winnipeg (see attached Landfill Inventory Appendix A). This study excludes Brady Road Resource Management Facility.
  
- Revise: 4.7 to read:                      Based on the Landfill Status Report the Consultant will recommend any changes in monitoring type and/or frequency along with location and type of any required monitoring equipment. Additionally, the Consultant will recommend any required physical work such as drainage improvements, gas and leachate collection enhancements, vegetation establishment, etc. This information will include an engineered plan delineating the chemical and biological active areas of the landfill property, the impacted areas, the non-impacted areas and all other structures located onsite including but not limited to buildings, roads, surface water storage and drainage, utilities and existing vegetation. The plan will further delineate the effects of the proposed closure measures on the aforementioned areas in terms of environmental risk mitigation. This will constitute the Environmental Risk report with is due in August 21, 2015.
  
- Revise: 4.9 to read                      A rehabilitation report will be developed by October 16, 2015. This plan will include a Class 3 (30% design) cost estimate for recommendations of the Environmental Risk report, based on current unit prices for earth moving, drainage improvements, gas and leachate collection enhancements, vegetation establishment, etc. to reduce the environmental impact or to insure/maintain current acceptable impacts for all disposal sites.

### PART D – SUPPLEMENTAL CONDITIONS QUESTIONS AND ANSWERS

Q1: With respect to the provision of data from the monitoring and assessment activities to the successful proponent, what is the nature and frequency of the on-going activities?

A1: The nature and frequency is similar to the 1993 Disposition Study. We sample groundwater, surface water, leachate, and gases at the various sites currently based on individual site needs. Currently we test the surface water around four sites semi-annually, the groundwater around five sites semi-annually, leachate annually at four sites, and gases at least annually at most sites. Data from 2007 to present will be available in excel and PDF format, data prior will be available in PDF format.

Q2: In reference to D4.7, will the City be providing a base plan or base survey of each site and the surrounding control zone land in ACAD or other electronic format on which details of impact delineation, etc. can be added as part of this study?

A2: LiDAR and AutoCAD information will be available for the landfill sites.

## **Appendices**

Replace: Appendix A – Location of Landfill and Dump Sites with Appendix A – Location of Landfill and Dump Sites\_Addendum\_3

Add: Appendix C, Pages 112-117 of Appendix B

Add: Appendix D-Volume 2 of Appendix B
