

An aerial photograph of a city, likely Los Angeles, showing a river winding through the urban landscape. The image is dark and semi-transparent, serving as a background for the text. The text is centered and reads "USE CASE REFERENCE" in large, bold, white capital letters. Below it, in smaller white capital letters, is "WATER AND WASTE DEPARTMENT DATA ANALYTICS AND INSIGHTS".

# USE CASE REFERENCE

WATER AND WASTE DEPARTMENT DATA ANALYTICS AND INSIGHTS

# Data: The Key to the Utility of the Future

The Water and Waste Department (WWD) can leverage Business Intelligence and Analytics (BIA) to gather insights regarding services offered and make better fact-based decisions to realize synergies, minimize costs, and deliver greater value for customers.

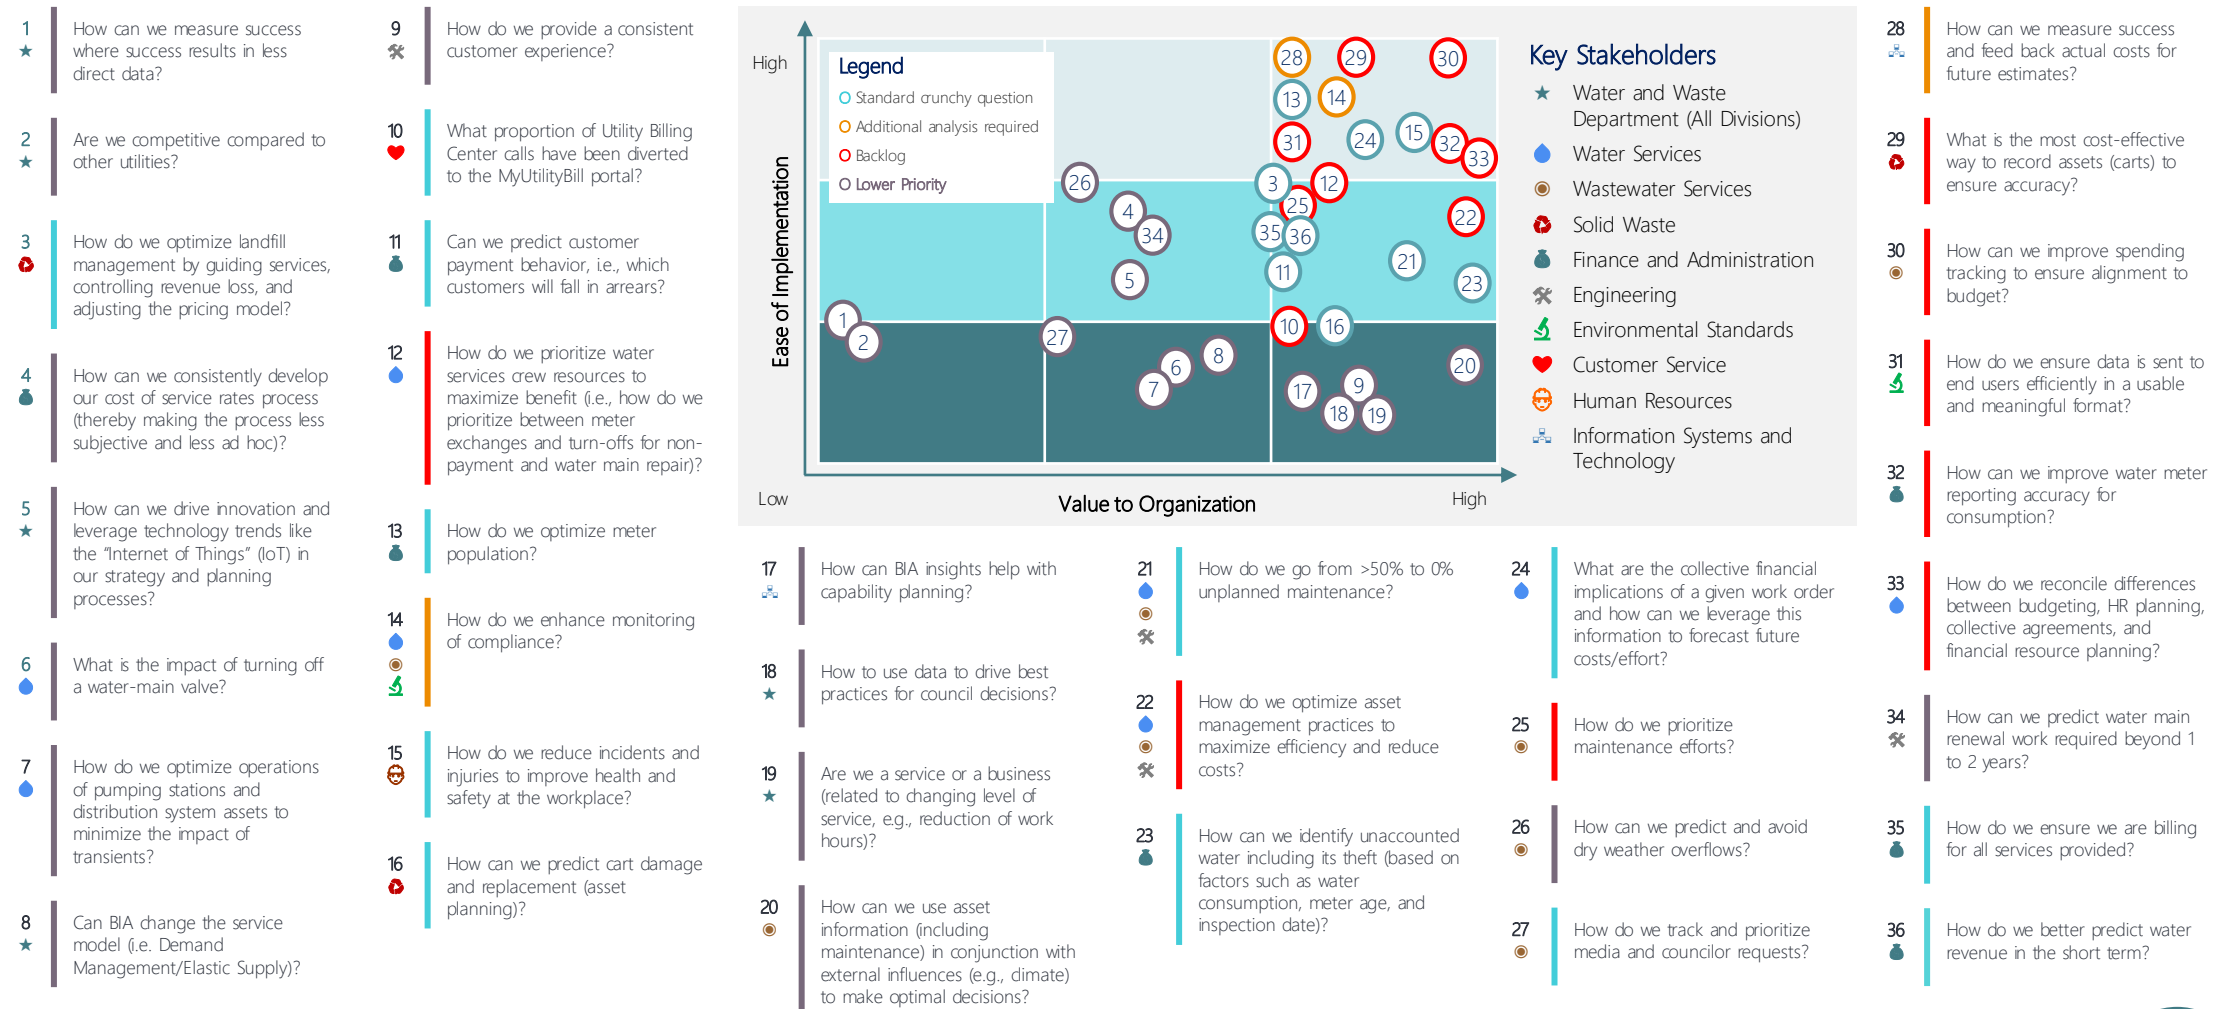

# Opportunities and Challenges

In 2018, the Department and its divisions were engaged to provide immediate ideas on what critical opportunities and challenges need to be addressed to optimize performance, improve citizen confidence, sustain operations and service delivery, and more.

These ideas were captured as **Crunchy Questions** which form the basis for developing robust **Use Cases** that will be addressed through the offering of BIA products and services.

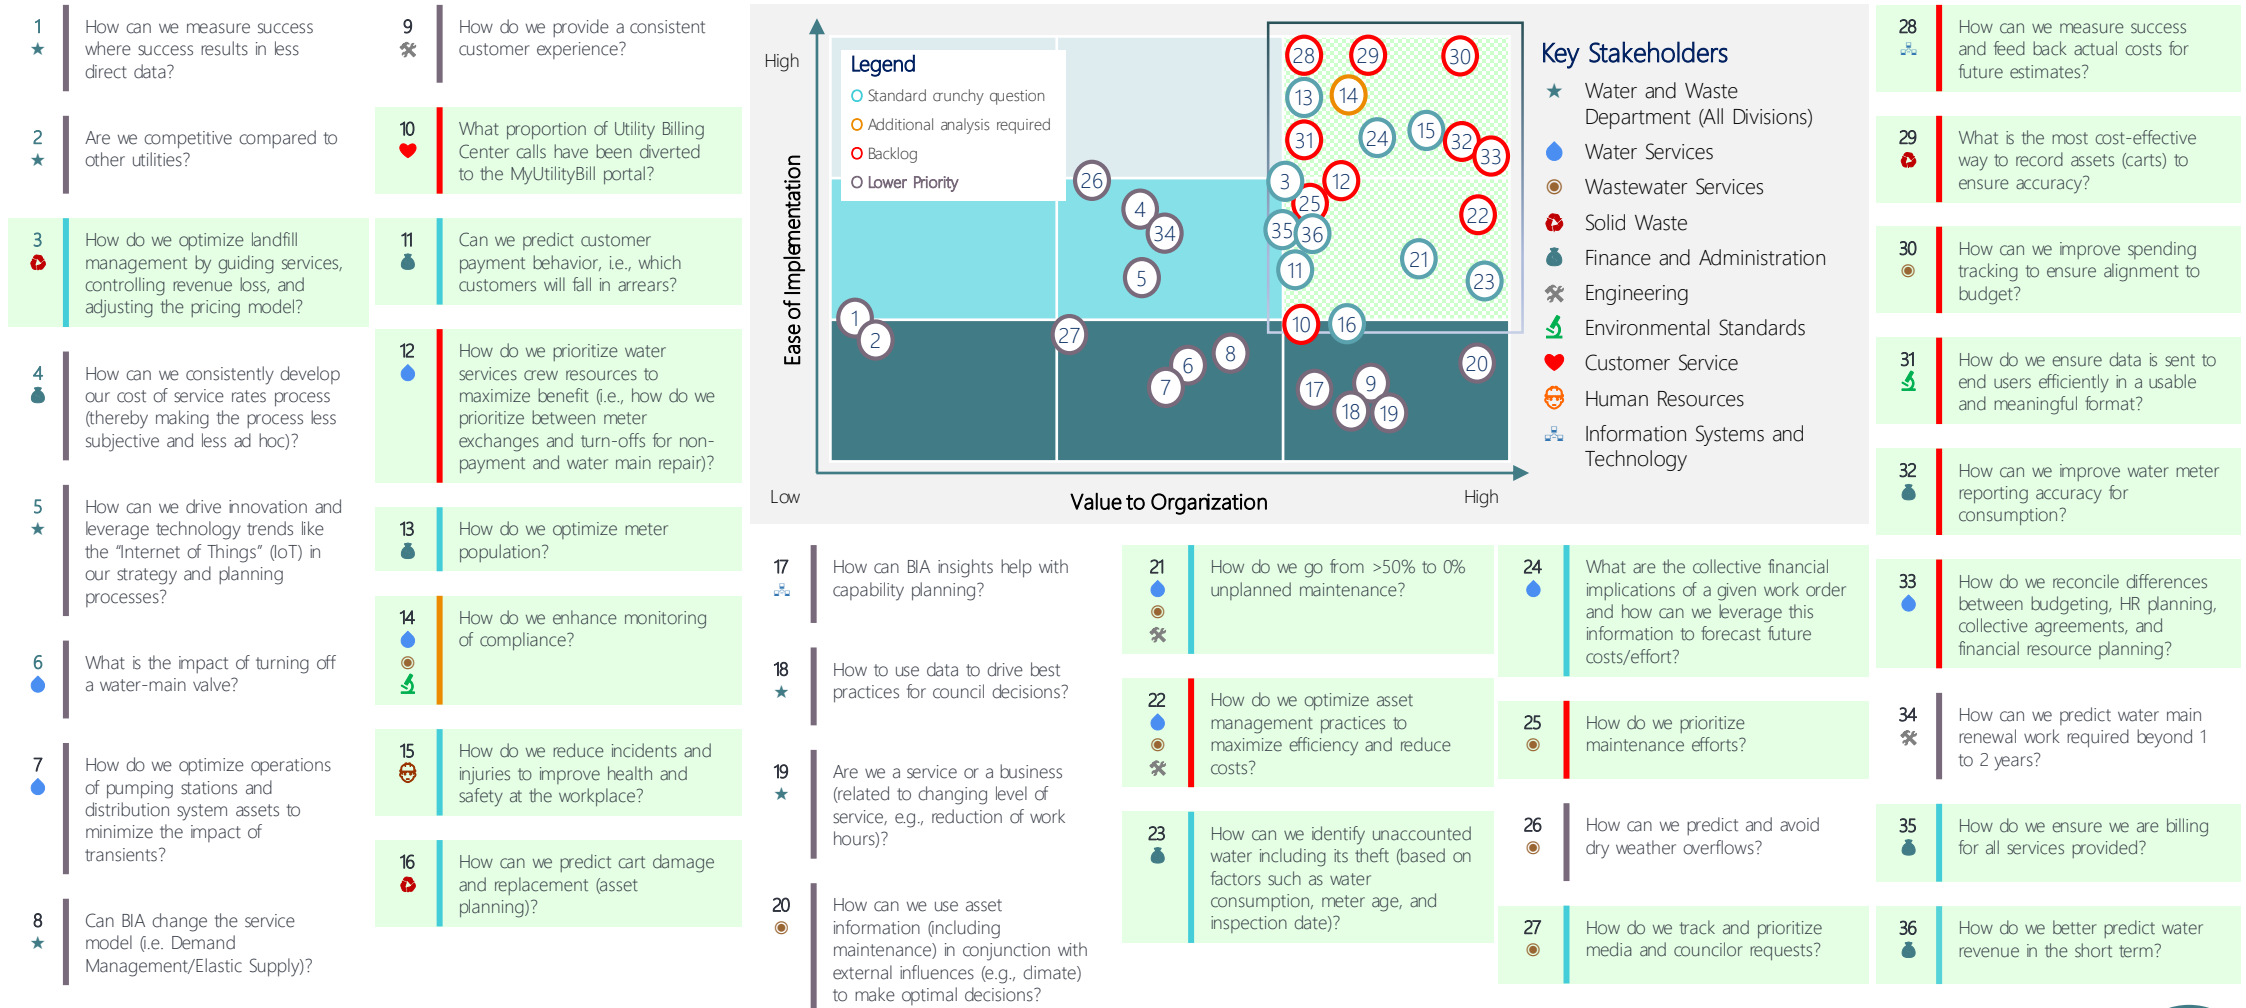

# Crunchy Questions Prioritization Map

A prioritization map is essential for distilling key business questions into what has value, what's complex, and thus answering what should be targeted as initial BIA efforts.

# Crunchy Questions Prioritization Map

A prioritization map is essential for distilling key business questions into what has value, what's complex, and thus answering what should be targeted as initial BIA efforts.

# USE CASE PRIORITIZATION SUMMARY

OVERVIEW OF USE CASES TO BE DEVELOPED IN ORDER OF PRIORITY, VALUE AND EASE OF IMPLEMENTATION

# Use Case Prioritization Summary

Where a Crunchy Question represents a business problem that needs to be addressed, a Use Case outlines the requirements, application and objectives of a solution to a problem.

Priority	Crunchy Question	Use Case	Area of Impact	Objective	Requirements	Key Data Sources	Data Format				Data Structure	Volume	Perceived Data Quality
							Database	Extract	Digital	Paper			
1	15	<b>How do we reduce incidents and injuries to improve health and safety at the workplace?</b>  Dimensions & Measures Incidence Event, Incidence Date, Severity, Severity Score, Frequency, Cost Centre, Lost Hours, Claim Cost, Training History, Certifications, Location, Action, Job Description, etc.	<b>Safety Analytics</b>   <b>Human Resources</b>	Reduce the number and frequency of injuries and other incidents to create a safer workplace.  Reduce financial, legal, and reputational liabilities.	Supervisors should be able to view safety data to take necessary corrective actions.  Data should be able to give us factors and predictors of safety incidents.  Visualizations should allow users to drill-down a granular level to explore and improve analysis. # USE CASE VALUE PROPOSITION

WHY ARE THESE USE CASES IMPORTANT? HAVE OTHER UTILITIES DONE THE SAME AND ACHIEVED THE DESIRED RESULT?

# Use Case Value Proposition

A value proposition tells us 'Why' an organization should undertake an initiative or use case, what success would look like to the user and ultimately, the benefit to the organization.

Priority	Crunchy Question	Use Case	Area of Impact	Desired Success Outcome(s)	Value Drivers	Business Champion	Key Users	Real World Application	
								Client	Success Outcome(s)
1	15	How do we reduce incidents and injuries to improve health and safety at the workplace?	Safety Analytics Human Resources	Ability to analyze safety data in a more meaningful manner.  Raise awareness, design, develop and implement more effective corrective and preventative actions to safety incidences.  Improve quality and timeliness of safety-related decisions.	◆ ▶ \$	Floyd Buhler	Safety Officer Division Manager Branch Heads Supervisors	General Industry Trends in the Canadian Workplace <sup>1</sup>	Cost avoidance of penalties/sanctions; reduction in direct cost of WCB premiums; reduce claim costs; improve productivity; and avoid litigation attributed to negligence claims in avoidable safety incidents.
2	13	How do we optimize meter population?	Water Meter Life Cycle Analytics Finance and Administration	Ability to identify the optimum time to replace each meter and demonstrate the return on investment.  Ability to analyze meter asset information by various characteristics, categories and groupings.	\$ ◆ ▶	Jason Enns	Superintendent Meters Division Manager Assistant Controllers Branch Heads Planners Supervisors	Clayton County Water Authority (CCWA) in Morrow, Georgia <sup>2</sup>	3% of residential meters were under-registering on average \$6 per meter. Nonresidential meters were under-registering on average at \$67 per meter. Total revenue loss amounted to more than \$585,000 over a four-year period. 22 meters were prioritized for replacement and uncovered \$200,000 in lost revenue over the next five-years.
3	23	How can we identify unaccounted water including its theft (based on factors such as water consumption, meter age, and inspection date)?	Non-Revenue Water (NRW) Identification Analytics Finance and Administration	Ability to distinguish between a meter slowly degrading in reading accuracy versus a sudden change in consumption that could be caused by theft, tampering, open by-pass, change of occupancy, etc.  Ability to analyze meter asset information by various characteristics, categories and groupings.	\$ ♥ ▶ ◆	Jason Enns	Superintendent Meters Division Manager Assistant Controllers Branch Heads Planners Supervisors	Multiple-US utilities observed for trends in non-revenue water <sup>2,3</sup>	Data analytics help utilities account for and combat 20-30% of annual NRW and accelerates the adoption of Advanced Metering Infrastructure (AMI). Annual global NRW is estimated to be over \$14 billion USD.
4	21	How do we go from >50% to 0% unplanned maintenance?	Wastewater Predictive Maintenance I (Major Pumps) Wastewater Services	Ability to identify top causes of failures, their probability of occurrence and criticality to operations and service delivery in order to minimize impacts to citizens.  Ability to predict when maintenance is needed.	◆ ▶ \$ ♥	Richard Ramrattan	Engineers Division Manager Branch Heads Planners Supervisors	Multiple-US utilities that implemented Specific Energy Inc.'s Intelligent Pump Station Optimization and Analytics Solution <sup>4</sup>	Pump optimization and management with data analytics unlocked anywhere from a 18-21% reduction in annual energy costs by minimizing specific energy and ensuring pumps operated within preferred operating ranges (POR).
