This does not waive or eliminate any associated insurance or other requirements.
- E7.6 In the event that the Contractor causes an unplanned partial or complete shutdown, the Contractor is responsible for providing all required services to remediate the issues on an emergency basis. No payment will be made to the Contractor for repair of any item related to the Contractor's work.

E8. OPERATING CONSTRAINTS FOR WORK IN CLOSE PROXIMITY TO CRITICAL WATER INFRASTRUCTURE

E8.1 Description

E8.2 This section details operating constraints for all Work to be carried out in close proximity to the City suction and discharge piping and other critical water infrastructure. Close proximity shall be deemed to be any construction activity within a 5 m horizontal offset from the centreline of suction and discharge piping, within a 5 m horizontal offset from a feeder main/water main, within 5 m of valve chambers and other appurtenances, within 5 m of the Aqueduct Interconnect, and any other infrastructure identified below.

E8.3 The following shall be considered critical pipelines and water infrastructure for this project:

E8.3.1 Hurst RPS

- (a) Charleswood Feedermain, 750 mm reinforced concrete water pipe – steel cylinder type, not prestressed, installed on the boulevard / sidewalk between the property line and back of the curb, and crossing the entrance driveway.
- (b) Wilkes Avenue Feedermain, 900 mm prestressed concrete pressure (PSC) pipe installed on the boulevard and crossing the entrance driveway.
- (c) Wilkes Avenue Reservoir Drainage Building outlet pipe, 600 mm asbestos cement (AC) class II sewer pipe installed on the west of Hurst RPS connecting the Drainage Lift Station to the City 1350 mm concrete LDS.
- (d) Wilkes Avenue Reservoir By-pass Piping, 1350 mm PSC suction pipe installed on the south side of the station crossing the driveway under the entrance gate.
- (e) 900 mm PSC suction pipe on the south side of the Hurst RPS Building supplying water from Wilkes Avenue Reservoir North Cell (Wilkes Avenue Reservoir No. 2) to the station crossing the gravel road.
- (f) 900 mm PSC interconnection suction pipe running diagonally on the south side of the Hurst RPS Building.
- (g) Two 1350 mm steel pipe in concrete suction lines on the southwest & southeast of Hurst RPS Building.
- (h) 1200 mm steel pipe in concrete discharge line on the northwest of Hurst RPS Building.

E8.3.2 MacLean RPS

- (a) The 1350mm Aqueduct Interconnector is constructed of PSC pipe runs and below the west slope of the MacLean Reservoir;
- (b) One 1500 mm PSC suction pipe running from the south face of the MacLean RPS to the MacLean Reservoir Valve House.

- (c) One 1500 mm PSC suction pipe running for the north east corner of the RPS and parallel to the east face of the RPS to the MacLean Reservoir Valve House.
- (d) One 1500 mm PSC suction pipe running parallel to the north face of the RPS from the east 1500 mm suction pipe into the north east corner of the RPS.
- (e) One 1200 mm PSC suction bypass pipe running from the intersection of the two 1500 mm suction pipes at the north east corner of the pump station to B-Valve Chamber at the 1350 mm Aqueduct Interconnect.
- (f) Two 1200 mm PSC discharge pipes which connect into the 1050 mm Speers Road PSC feedermain located under Lagimodiere Blvd. The discharges pipe exits one at the north face of the building and one at the south face of the building.

E8.4 General Considerations for Work in Close Proximity to Critical Water Infrastructure:

- E8.4.1 Suction and discharge pipes are critical components of the City of Winnipeg regional water supply system and work in close proximity to these pipe systems shall be undertaken with an abundance of caution. Suction and discharge pipes cannot typically be taken out of service for extended periods to facilitate construction and inadvertent damage caused to the pipe would likely have catastrophic consequences.
- E8.4.2 Work around critical water infrastructure shall be planned and implemented to minimize the time period that Work is carried out in close proximity to the pipe and to ensure that the pipe system is not subjected to excessive construction related loads, including excessive vibrations and/or concentrated or asymmetrical lateral loads during backfill placement.
- E8.4.3 Construction in close proximity to critical infrastructure shall not commence until both the equipment and construction method statements have been submitted, reviewed, and accepted by the Contract Administrator.

E8.5 Submittals

- E8.5.1 Submit Form K: Equipment to the Contract Administrator for review. The equipment submission shall include:
 - (a) equipment operating and payload weights;
 - (b) equipment dimensions, including: wheel or track base, track length or axle spacing, track widths or wheel configurations; and,
 - (c) load distributions in the intended operating configuration.
- E8.5.2 Submit a construction method statement to the Contract Administrator a minimum of five (5) Business Days prior to construction. The construction method statement shall contain the following minimum information:
 - (a) proposed construction plan including excavation locations, haul routes, excavation equipment locations, and loading positions;
 - (b) excavation plans, including shoring designs, for excavations occurring in close proximity to systems (within 5 m horizontal of the pipe's center line) where the excavation is to be extended below the top of the piping embedment zone (150 mm above the pipe);
 - (c) any other pertinent information required to accurately describe the construction activities in close proximity to the piping systems and tunnel and permit the Contract Administrator to review the proposed construction plans.
- E8.5.3 Incomplete or partial submissions will not be reviewed and will be returned to the Contractor for re-submission.
- E8.5.4 Allow five (5) Business Days for review by the Contract Administrator.

E8.6 Ground Cover

- E8.6.1 The following are estimated depths to the top of the buried infrastructure and are considered approximate only based on the existing ground surface conditions at Sites.

- E8.6.2 MacLean RPS:
- (a) the general ground elevation varies 231.790 m at the building down to 231.330 m as it slopes away from the structure.
 - (i) 1500 mm suctions 8.84 m;
 - (ii) 1200 mm discharges 4.28 m;
 - (iii) 1200 mm suction bypass varies from 2.4 m at the B Valve Chamber to 9 m at the 1500 m suction intersection.
 - (iv) 1350 mm Aqueduct Interconnection varies from 2.3 m at the B Valve Chamber to 10.55 m under the MacLean Reservoir berm.
- E8.6.3 Hurst
- (a) Discharge piping 2.3 m
 - (b) Suction piping 4.67 m
- E8.7 Pre-Work, Planning and General Execution
- E8.7.1 No Work shall commence in close proximity to suction inlet or discharge piping and critical infrastructure until the equipment specifications and construction method statement have been submitted and accepted, and suction or discharge headers and mains locations have been clearly delineated in the field. Work over suction or discharge headers and mains shall only be carried out with equipment that has been reviewed and quantified in terms of its loading implications on the pipe.
- E8.7.2 Contact the City of Winnipeg Water and Waste Department, Construction Services Coordinator prior to construction.
- E8.7.3 Coordinate locates of yard piping with Contract Administrator.
- E8.7.4 Visually delineate all critical infrastructure identified herein on Site by use of paint, staking/flagging, construction fencing, snow fencing, or other suitable methods.
- E8.7.5 Only utilize construction practices and procedures that do not impart excessive vibratory loads on suction inlet or discharge piping or that would cause settlement of the subgrade below suction inlet or discharge piping.
- E8.7.6 Where the existing road structure must be removed, crossing of critical infrastructure shall be prohibited from the time the existing roadway structure is removed until the completion of granular base construction. At all times prior to completion of final paving; reduce equipment speeds to levels that minimize the effects of impact loading to the critical infrastructure.
- E8.7.7 Only equipment and construction practices stipulated in the accepted construction method statement and the supplemental requirements noted herein may be utilized in close proximity to suction inlet or discharge piping and other critical infrastructure identified herein.
- E8.7.8 Granular material, construction material, soil, and/or other material shall not be stockpiled on the pipelines or within 5 m of any suction inlet or discharge piping or other critical infrastructure identified herein.
- E8.7.9 The Contractor shall ensure that all crew members understand and observe the requirements of working near suction inlet or discharge piping and critical infrastructure. Prior to commencement of on-Site work, the Contractor shall jointly conduct an orientation meeting with the Contract Administer, all superintendents, foreman, and heavy equipment operators to make all workers on the Site fully cognizant of the limitations of altered loading on, the ramifications of inadvertent damage to, and the constraints associated with work in close proximity to suction inlet or discharge piping. New personnel introduced after commencement of the project need to be formally orientated as outlined herein. It is recommended that restrictions associated with the crossing, consistent with the Contractor's submitted method statement be posted on Site and near the crossing.

E8.8 Demolition, Excavation, and Shoring

E8.8.1 Use of pneumatic concrete breakers within 3 m of a suction inlet or discharge piping or critical pipeline is prohibited. Pavement shall be full depth sawcut and carefully removed. Use of hand held jackhammers for pavement removal will be allowed.

E8.8.2 Offset excavation equipment a minimum of 3 m from the center line of suction inlet or discharge piping or critical pipelines when undertaking excavations where there is less than 2.4 m of earth cover over the pipeline.

E8.9 Excavation:

E8.9.1 Utilize only smooth edged excavation buckets, soft excavation, or hand excavation techniques where there is less than 1.5 m of earth cover over the pipeline.

E8.9.2 Where there is less than 1.0 m of soil cover above the pipeline, provide full time supervision and complete the excavation utilizing hand excavation, soft excavation methods, or machine excavation. Where machine excavation is to be used, the crown of the pipeline must be exposed (or suitable located) using hand or soft excavation methods a minimum of every 1.8 m.

E8.9.3 Where there is less than 0.5 m of soil cover above the pipeline, provide full time supervision and complete the excavation utilizing hand excavation or soft excavation methods only.

E8.9.4 Equipment should not be allowed to operate while positioned directly over suction inlet or discharge piping except where permitted herein, outlined in the reviewed and accepted construction method statement.

E8.9.5 Excavations within 3 m of the outside edge of suction inlet or discharge piping (hydrovac holes for confirming trenchless installations excluded) and which extend below the top of the suction inlet or discharge piping shall utilize shoring methods that precludes the movement of native in-situ soils (i.e. a tight shoring system).

E8.9.6 Excavation and base placement for sidewalks and approaches shall be completed remotely with limitations as specified herein.

E8.10 Subgrade Construction

E8.10.1 Subgrade and backfill compaction within 3 metres (horizontal) of suction inlet or discharge piping shall be limited to non-vibratory methods only. Small walk behind vibratory packers will be permitted.

E8.10.2 Subgrade, sub-base and base course construction shall be kept in a rut free condition at all times. Construction equipment is prohibited from crossing pipelines if the grade is insufficient to support the equipment without rutting.

E8.10.3 Subgrade conditions should be inspected by personnel with competent geotechnical experience (e.g. ability to adequately visually classify soils and competency of subgrade, subbase, and base course materials). In the event of encountering unsuitable subgrade materials above the suction inlet or discharge piping, proposed design revisions shall be submitted to the Contract Administrator for review to obtain approval from the Water and Waste Department relative to any change in conditions.

E8.10.4 Fill material shall not be dumped directly on pipelines but shall be stockpiled outside the limits noted in these recommendations and shall be carefully bladed in-place.

E8.10.5 Only use compaction equipment approved by the Contract Administrator to compact fill materials above suction inlet or discharge piping or critical pipelines. Compaction of fill materials shall be completed using static methods only, no vibratory compaction will be allowed within the limits noted in these recommendations.

E8.10.6 Construction operations shall be staged to minimize the time period between excavation to subgrade and placement of granular subbase materials. Should bare subgrade be left

overnight, measures shall be implemented to protect the subgrade against inadvertent travel over it and to minimize the impact of wet weather.

E8.11 Subbase and Base Course Construction

- E8.11.1 Subbase or base course materials shall not be dumped directly on pipelines but shall be stockpiled outside limits noted in these recommendations and shall be carefully bladed in place.
- E8.11.2 Subbase compaction within 3 m horizontal of the centreline of suction inlet or discharge piping or a critical pipeline shall be either carried out by static methods (without vibration) or with smaller approved equipment such as hand held plate packers or smaller roller equipment.

E9. TRAFFIC CONTROL

- E9.1 In accordance with the Manual of Temporary Traffic Control on City Streets (MTTC), the Contract Administrator shall make arrangements with the Traffic Services Branch of the City of Winnipeg to place, maintain, and remove all regulatory signs and traffic control devices authorized and/or required by the Traffic Management Branch in the following situations:
 - (a) Parking restrictions,
 - (b) Stopping restrictions,
 - (c) Turn restrictions,
 - (d) Diamond lane removal,
 - (e) Full or directional closures on a Regional Street,
 - (f) Traffic routed across a median,
 - (g) Full or directional closure of a non-regional street where there is a requirement for regulatory signs (turn restrictions, bus stop relocations, etc.) to implement the closure.
 - (h) Approved Designated Construction Zones with a temporary posted speed limit reduction. Traffic Services will be responsible for placing all of the advance signs and 'Construction Ends' (TC-4) signs. The Contractor is still responsible for all other temporary traffic control including but not limited to barricades, barrels and tall cones.
- E9.2 Further to E9.1(c), the Contractor shall make arrangement with the Traffic Services Branch of the City of Winnipeg to supply regulatory signs as required.
- E9.3 Upon request from the Contract Administrator, the Contractor shall provide records demonstrating that the Site has been maintained.
- E9.4 Further to E9.1 (c) and E9.1 (d) the Contractor shall make arrangements with the Traffic Services Branch of the City of Winnipeg to reinstall the permanent regulatory signs after the Contract Work is complete.
