Thursday, June 11, 2009

### **Update on Mosquito Control and Cankerworm Control Program**

#### **Winnipeg, MB – NUISANCE MOSQUITO CONTROL PROGRAM**

The Insect Control Branch continues an aggressive larviciding program in response to the wet, cool weather. As a result of the recent rainfall, coupled with the receding flood waters, and the forecasted upcoming warm temperatures, it is expected that the summer adult nuisance mosquitoes will become more active over the next few days.

In response to these challenging conditions, the aggressive larviciding program will continue in an effort to reduce the potential for the emergence of a significant adult nuisance mosquito population. The Insect Control Branch will be monitoring conditions on a daily basis and are ready to implement the range of necessary control measures as conditions change.

The Insect Control Branch is utilizing all resources which include approximately 150 staff and 4 helicopters to check and treat approximately 34,000 hectares of potential water sites in Winnipeg and the surrounding 10 km treatment area.

#### ***AFA STILL LOW***

Today, the city-wide New Jersey Light Trap count is still zero but is likely to change as weather conditions begin to improve. Currently, the Adulticiding Factor Analysis (AFA) rating remains at low.

The Insect Control Branch is closely monitoring the AFA conditions daily, and as the temperatures increase, this will likely result in an AFA change over the coming days.

#### ***HELP FIGHT THE BITE***

The City is strongly encouraging property owners to also help “Fight the Bite” as 50 percent of standing water sites are located on private property. Homeowners

can take one of the following steps to eliminate standing water on their properties:

- **Dump It!** - containers
- **Drain It!** - eavestroughing or unused containers
- **Cover It!** - rain water collection containers
- **Fill It!** - low-lying areas
- **Treat It!** - biological larvicide

### **CANKERWORM CONTROL PROGRAM**

The Insect Control Branch's cankerworm control program, which began on Sunday evening, May 31, 2009, has been progressing well despite some delays on nights when poor weather conditions have developed.

To date, the program has focused on trees which are at risk of significant leaf damage in City parks and on City boulevards. Assiniboine Park, Kildonan Park, St. Vital Park and Cemetery and Brookside Cemetery have all been treated. Along with Insect Management Areas 45 (Burrows Central, Robertson, William Whyte), 47 (Inkster - Faraday, Luxton, St. John's, St. John's Park), & 1 (Kilcona Park, River East, Springfield North, Valhalla, and the majority of 2 Kildonan Drive, Rossmere A).

Tonight, June 11, 2009, the program will continue in Insect Management Areas 2 and 33 (Kildonan Drive, Rossmere A, Lord Roberts, River-Osborne, Riverview). Beginning today, the Insect Control Branch will be expanding the spray program to 7 nights per week until further notice.

It is anticipated that the program will last for approximately three more weeks. A Public Service Announcement will continue to be issued daily providing information on what treed areas of the city will be sprayed that night. This announcement will also be posted on the Insect Control website at [Winnipeg.ca/bugline](http://Winnipeg.ca/bugline).

Treatment will be conducted utilizing Btk, a biological product, which is sprayed from high pressure tree sprayers directly onto the foliage of the trees. Once Btk is ingested by the cankerworms, they stop feeding and die approximately two to three days later.

Homeowners are responsible for control on their property. Citizens can spray their own trees with Btk, which is available at most home and garden centres or can contract a tree spraying service by referring to the yellow pages under tree service or exterminators.

Citizens may register for a 30m buffer zone if they do not wish spraying to be carried out on or adjacent to their property. Citizens may register by faxing 311,

or by contacting the Insect Control Branch in writing at 3 Grey Street, Winnipeg, MB, R2L 1V2, or by registering on line at [Winnipeg.ca/bugline](http://Winnipeg.ca/bugline).

Citizens may register for email notification regarding planned tree spraying by visiting our website at [Winnipeg.ca/bugline](http://Winnipeg.ca/bugline). They can also register for telephone notification by calling 311 and leaving their name, address and phone number. Once registered, residents will receive automated phone or email notification identifying the area(s) of the City in which the Insect Control Crews are intending to work, weather permitting.

Interested individuals may acquire more information by contacting 311, or by visiting the City's Insect Control website at [Winnipeg.ca/bugline](http://Winnipeg.ca/bugline).
