Capital Forecast

2010 CAPITAL BUDGET PROCESS...

- Addressing the City's capital priorities
- Optimizing resources
- Environmental stewardship

HIGHLIGHTS

- **Capital investment plan:**
 - **\$2 billion over the next 6 years**
 - **\$439.4 million in 2010**
 - **Focus on priority streets and bridges, sewer systems, and community infrastructure and amenities**
- **Strategic government partnerships**
 - **Active Transportation - \$20.4 million**
 - **Waverley West Arterial Roads - \$54.7 million**
- **Cash to Capital \$65.5 million in 2010 and growing annually**
- **Redevelopment of Assiniboine Park through the Assiniboine Park Conservancy - \$8 million in 2010**
- **Aerial Support Unit - \$3.5 million in 2010**

AREAS OF MAJOR CAPITAL INVESTMENT

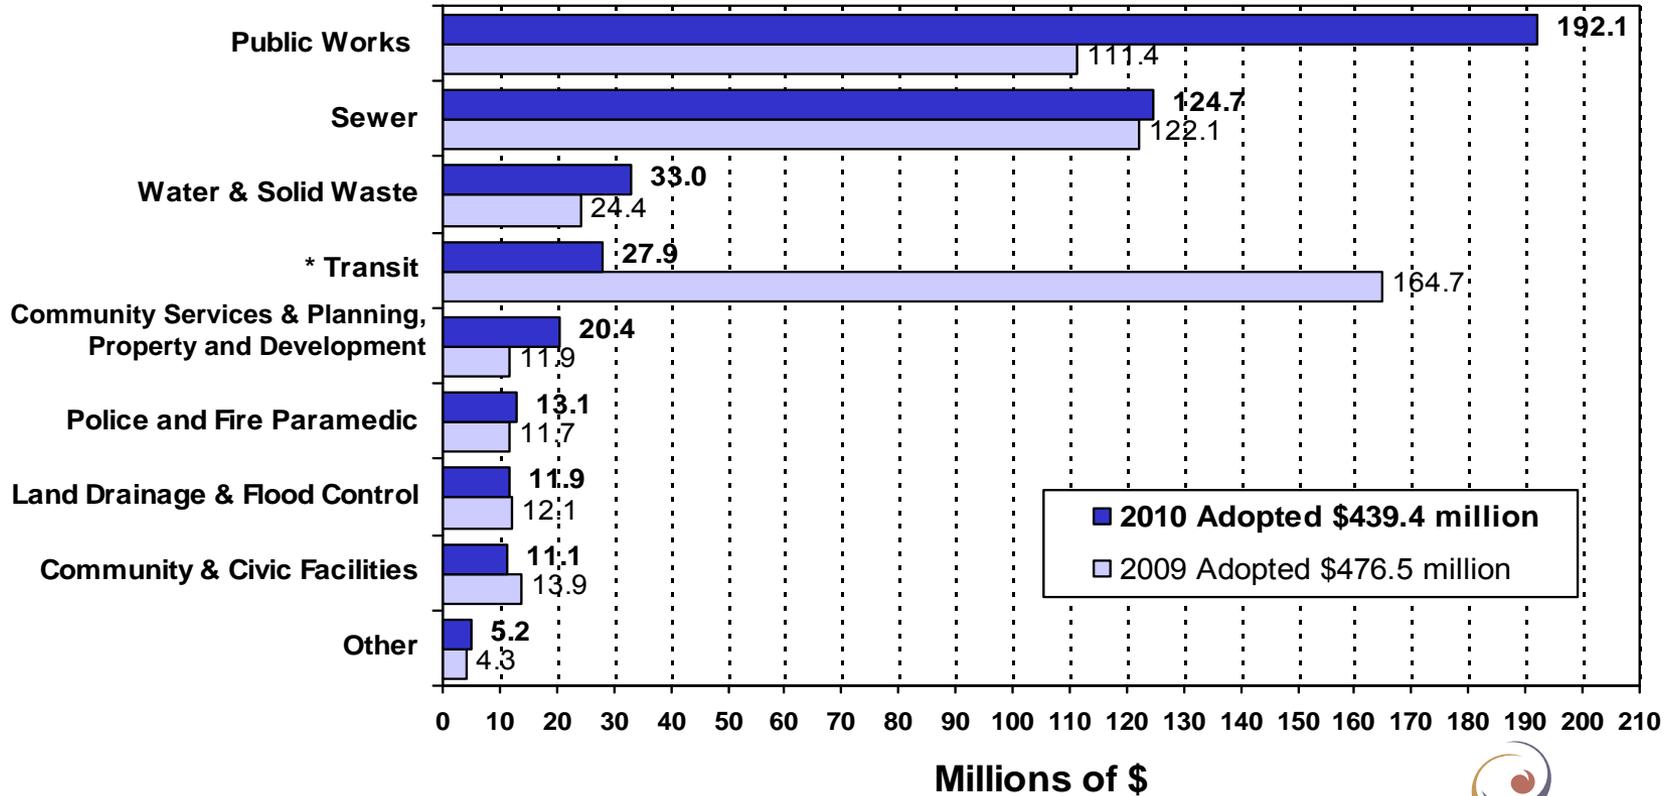

- **\$812 million for sewage disposal projects**
- **\$498 million for roads and bridges**
- **\$164 million for the transit system**
- **\$157 million for parks, community infrastructure and amenities**
- **\$147 million for the water system**
- **\$79 million for land drainage and flood control**
- **\$65 million for public safety infrastructure**

ENVIRONMENTAL STEWARDSHIP

- Active transportation
- Upgrades for wastewater collection and treatment
- Sewer renewal and combined sewer overflow management
- Land drainage and flood protection
- Riverbank stabilization
- Brady landfill gas capture

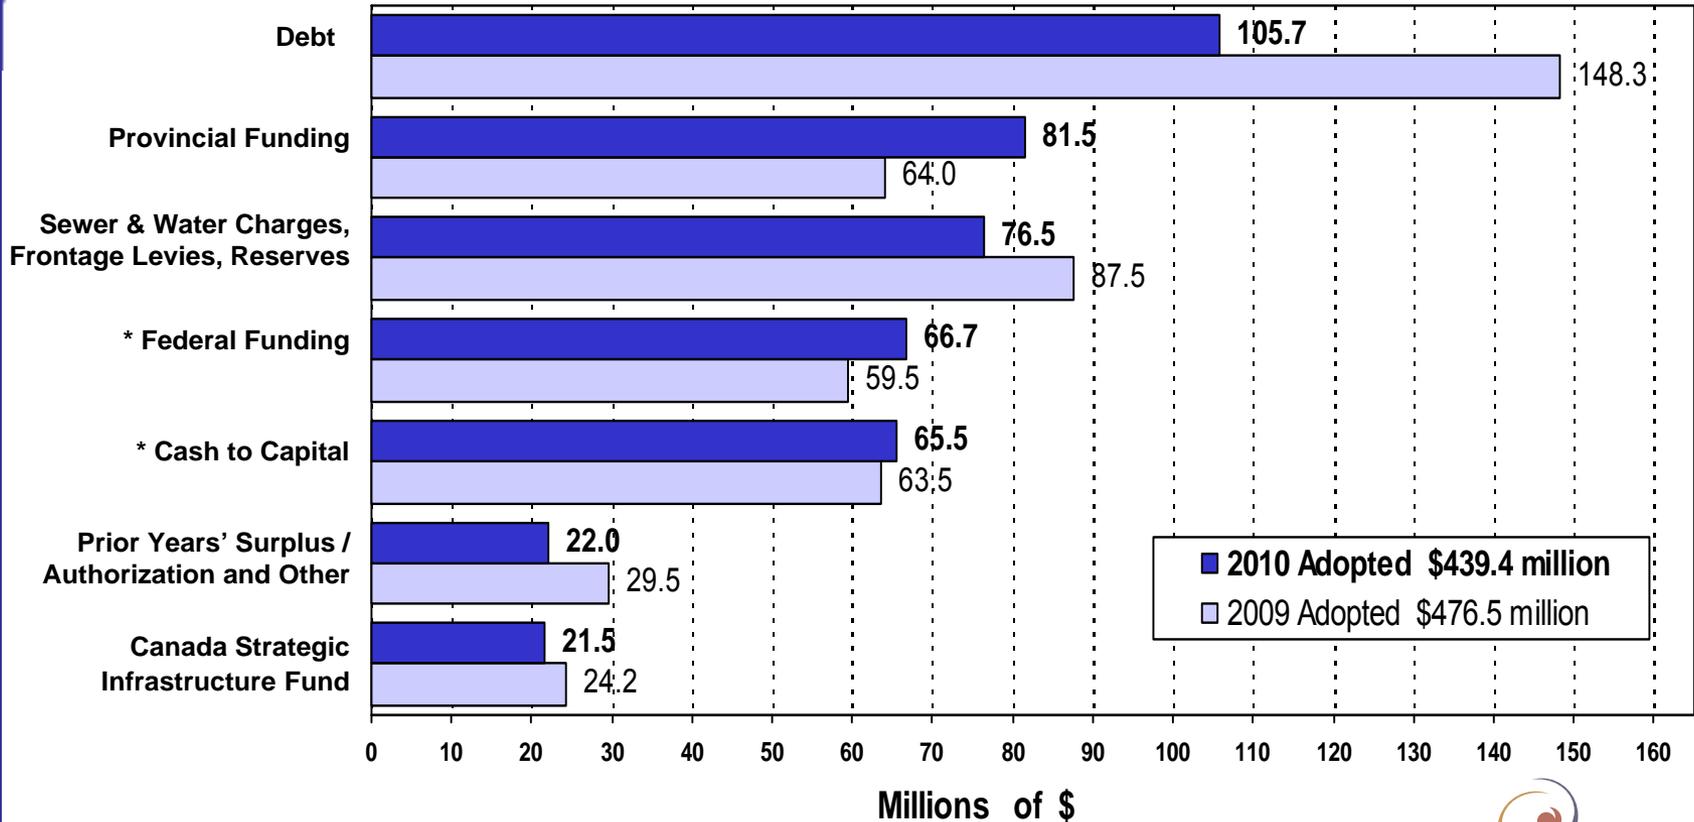

CAPITAL PROJECTS (Authorizations)

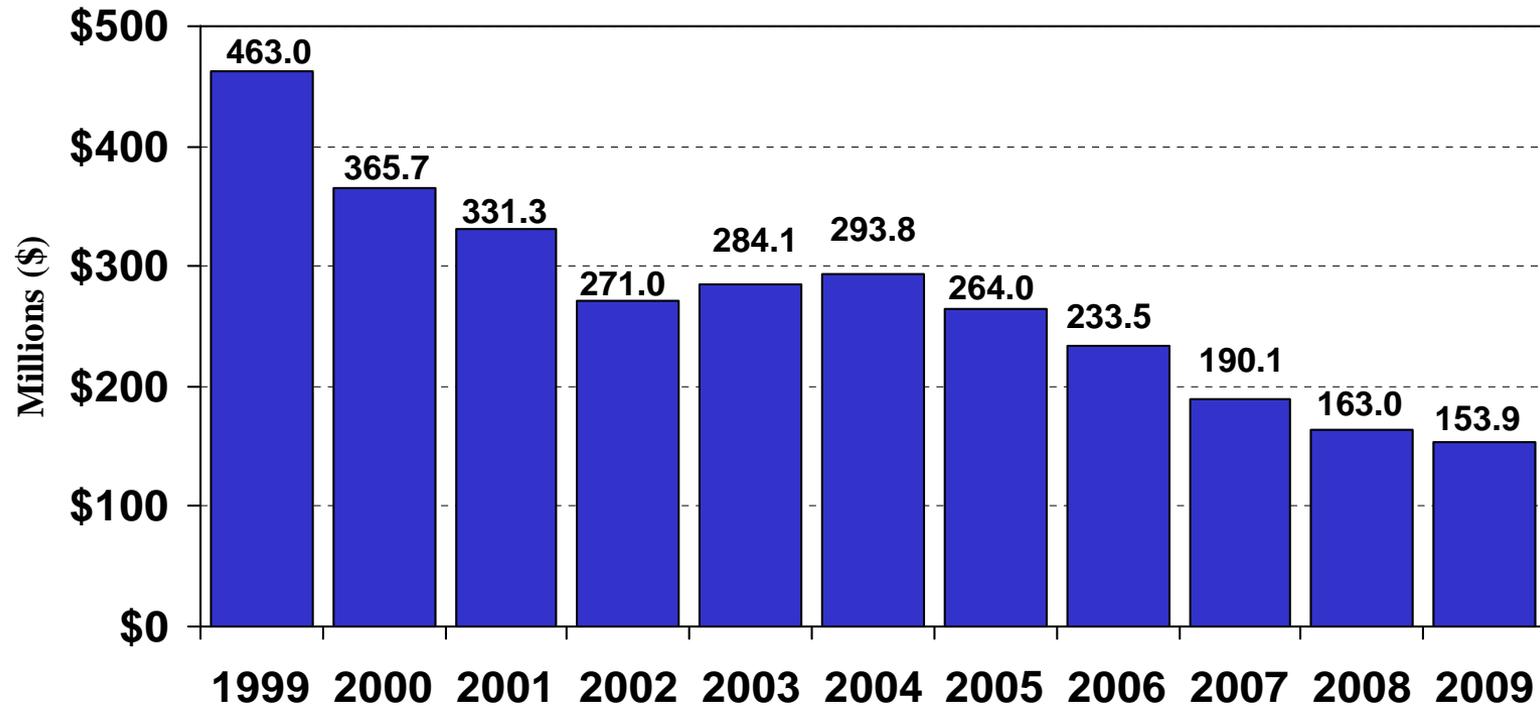

* 2009 Transit authorization includes \$138 million for Southwest Rapid Transit Corridor – Stage 1

CAPITAL FINANCING

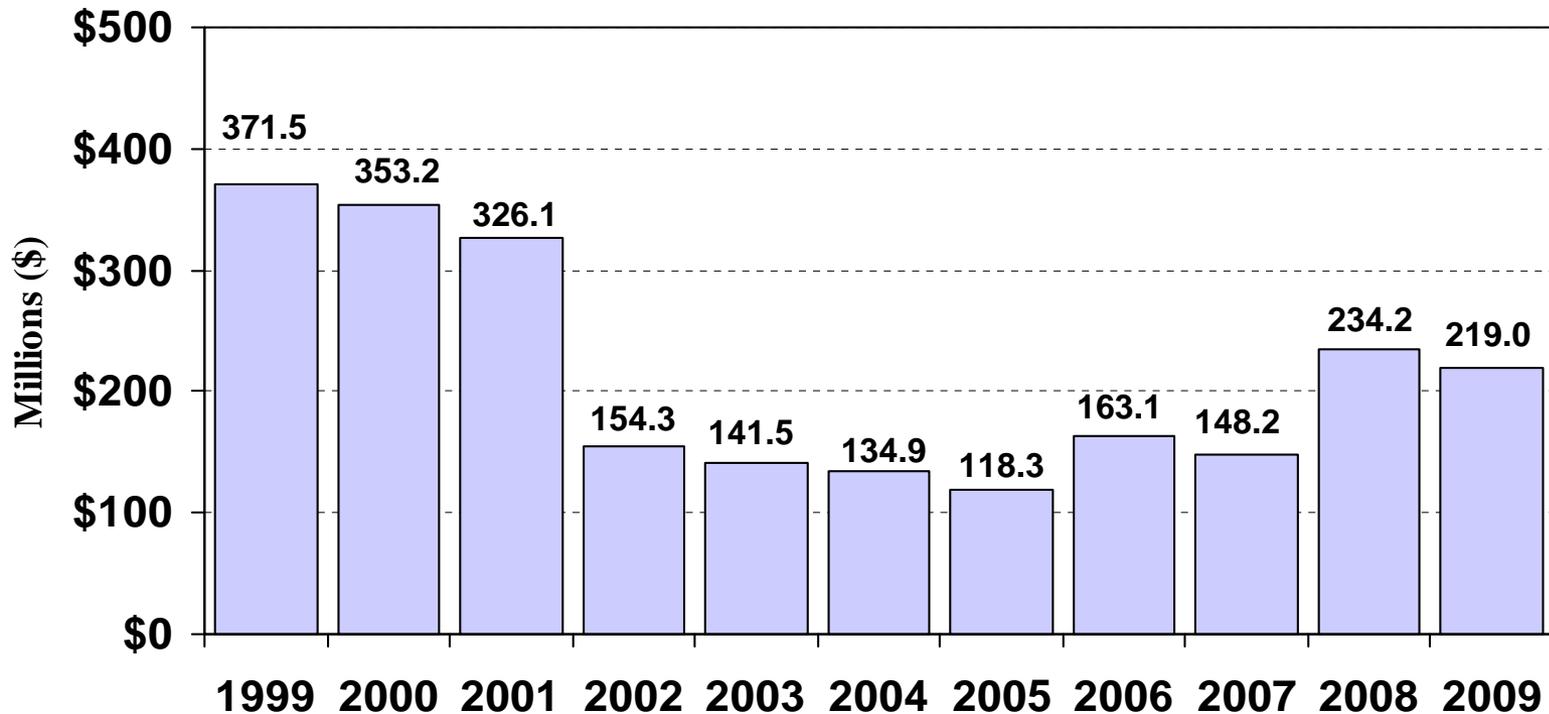

* Includes funding for P3 payments.

TAX SUPPORTED NET DEBENTURE DEBT

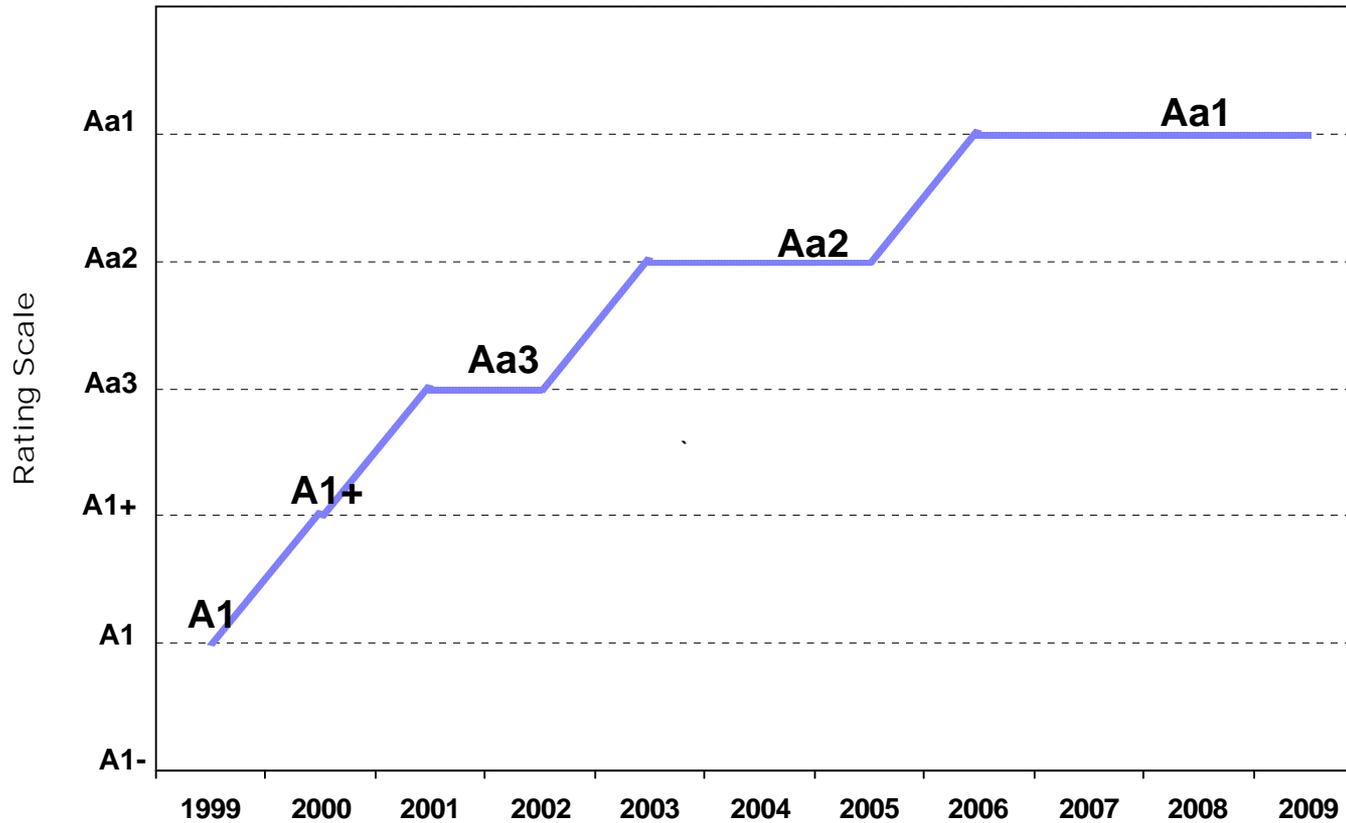

Tax supported net debenture debt decreased by 66.8% from 1999 to 2009.

UTILITY NET DEBENTURE DEBT

Utilities (including Civic Accommodations and Transit) net debenture debt decreased by 41.0% from 1999 to 2009.

CREDIT RATING

Council Adoption of the 2010 Capital Budget

On December 15, 2009 Council adopted the following recommendations:

1. A. That the 2010 Capital Budget totalling \$430,563,000 requiring borrowing authority of up to \$105,723,000, as tabled at the Executive Policy Committee meeting on November 16, 2009, and amended by Recommendation No. 2, be approved.
- B. That total borrowing authority include up to \$30,000,000 in tax supported debt for the Chief Peguis Trail – Henderson Highway to Lagimodiere Boulevard for a commissioning payment for the facility and \$75,723,000 for the Sewer and Solid Waste Disposal Systems.
- C. That the 2011 to 2015 Five Year Capital Forecast as tabled at the Executive Policy Committee meeting on November 16, 2009, and amended by Recommendation No. 2, be approved in principle.
2. A. That \$200,000 in 2010 for City Clerks – Security for Council Building be consolidated into the Civic Accommodations capital project Campus Area Security Upgrades.
- B. That funding for City Clerks - Office Automation totalling \$600,000 from 2011 - 2015 be transferred to the Capital Investment Fund.
- C. That an Aerial Support Unit in the amount of \$3.492 million be added to the 2010 Capital Budget, to be interim financed from the Equity in Capital Assets Fund with repayment in 2011, with a corresponding decrease of \$3.492 million in the General Purpose Reserve in 2011, subject to new incremental funding from the Province of Manitoba for all ongoing operating costs.
- D. That capital grants be approved from the General Purpose Reserve as follows:
 - i. \$250,000 in 2010 for the Variety Heritage Adventure Park;
 - ii. \$100,000 in 2011 for the Manitoba Children’s Museum; and
 - iii. \$50,000 in 2011 for Le Cercle Molière.
- E. That the Regional and Local Streets 2011 projects – Regional Major Rehabilitation Works – Taylor Avenue Eastbound Nathaniel to Wilton and Westbound Nathaniel to Waverley be advanced to 2010 in the total amount of \$3,150,000 with interim financing from the Equity in Capital Assets Fund.

F. That the Regional and Local Streets 2011 project – Local Thin Bituminous Overlay (TBO) be advanced to 2010 in the total amount of \$1,000,000 with interim financing from the Equity in Capital Assets Fund.

3. That the cash to capital contribution be as follows:

Year	\$ Millions
2010	65.478
2011	67.478
2012	69.478
2013	71.478
2014	73.478
2015	75.478

4. That the following prior years' tax supported capital surpluses be transferred to fund tax supported capital projects in the 2010 Capital Budget:

- A. \$1.645 million from the recent capital review;
- B. \$1.328 million from the 2008 Capital Investment Fund;
- C. \$0.7 million from the 2009 Innovative Capital Fund;
- D. \$3.3 million from the Public Works and Water and Waste Facility Consolidation Project; and
- E. \$2.6 million from the Police Building Replacement Project.

5. That annual lease/service payments and debt servicing costs for tax supported public private partnerships be funded annually up to a maximum of 30% of the cash to capital contribution and the federal gas tax.

6. That all other transfers from utility operations, reserves and other funds outlined in the Capital Budget be approved.

7. That the expenditure of \$2.37 million be authorized for the Fare Collection System in 2010 or prior to the adoption of the 2011 Capital Budget as a first charge, in accordance with Subsection 288(2) of The City of Winnipeg Charter to allow for timely contract award and capital work.

8. That the City Solicitor/Manager of Legal Services be requested to submit the necessary borrowing by-law directly to Council.

9. That \$290,000 be authorized for the purpose of assembling land and constructing the Transcona Centennial Square public park in Downtown Transcona in 2010, subject to:
 - A. The said funds being funded from the Land Operating Reserve.
 - B. That the said funds being returned to the Land Operating Reserve from the future sale of land(s) in the Transcona Ward, principally the sale of all or part of the lands known as 401 Pandora Avenue West.
 - C. \$150,000 from existing funds previously committed to capital projects for Transcona Centennial Celebrations are now dedicated to the land assembly and construction of the Transcona Centennial Square Project.
 - D. \$25,000 from the Transcona Ward share of the 2010 Community Park Amenities fund being dedicated to the land assembly and construction of the Transcona Centennial Square Project.
 - E. \$35,000 from the Transcona Ward share of the Land Dedication Account being dedicated to the land assembly and construction of the Transcona Centennial Square Project.
 - F. A minimum commitment from the Province of Manitoba of \$500,000 toward the Transcona Centennial Square project.
 - G. The project information as set out in the Transcona BIZ Downtown Streetscape Revitalization Strategy.

10. That the Proper Officers of the City be authorized to do all things necessary to implement the foregoing, including the execution of any documents related thereto.

The City of Winnipeg

CAPITAL PROJECTS SUMMARY

2010

Adopted Capital Budget

and

2011 to 2015

Five Year Forecast

Adopted by Council December 15, 2009

Notes:

1. Capital budget amounts are estimates only and are subject to materials management policy (e.g. tenders, bids, and contract awards including Public Private Partnership proposals).
2. In the attached Capital Projects Listing, tax supported capital projects are financed by cash to capital unless another funding source is disclosed for the project. In addition, the Manitoba Winnipeg Infrastructure Program, Provincial funding for Road Improvements and Prior Years' Surplus financing amounts are not all allocated to individual capital projects. These unallocated financing amounts will offset cash to capital requirements.
3. The Public Service uses the Association for the Advancement of Cost Engineering (AACE) International Classification system for capital budget estimate purposes for all non-scalable projects. Capital estimates for non-scalable projects contained in this budget document are supported by a class 4 or 5 estimate, unless specifically noted.

Transit.....	3-148
Water and Waste.....	3-153
Winnipeg Golf Services.....	3-250

Notes:

1. Capital budget amounts are estimates only and are subject to materials management policy (e.g. tenders, bids, and contract awards including Public Private Partnership proposals).
2. In the attached Capital Projects Listing, tax supported capital projects are financed by cash to capital unless another funding source is disclosed for the project. In addition, the Manitoba Winnipeg Infrastructure Program, Provincial funding for Road Improvements and Prior Years' Surplus financing amounts are not all allocated to individual capital projects. These unallocated financing amounts will offset cash to capital requirements.
3. The Public Service uses the Association for the Advancement of Cost Engineering (AACE) International Classification system for capital budget estimate purposes for all non-scalable projects. Capital estimates for non-scalable projects contained in this budget document are supported by a class 4 or 5 estimate, unless specifically noted.

PUBLIC WORKS - GENERAL CAPITAL FUND

Project Name: **Recreational Walkways and Bike Paths - Various Locations**

Department: Public Works
Project: 183200XX10

Capital Priority Rating: 3 - 4
Service: Roadway Construction and Maintenance

AUTHORIZATION	Previous Budgets	2010 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total
			2011	2012	2013	2014	2015		
Project Costs (\$000's)	N/A *	1,000	1,000	1,000	1,000	1,000	1,000	5,000	6,000

A program whose main goal is to improve the movement of people and goods using the transportation system by improving the coordination of traffic signals along major corridors in the City.

- Increases existing system capacity by providing full monitoring capability of local controller operations.
- Provides a multi-protocol communications system that allows for the use of the existing field equipment as well as for the future procurement of different controller types from different manufacturers.
- Provides capacity for future system expansion.
- Upgrades remaining electro-mechanical signal controllers to full electronic technology.
- Minimizes on-going communications costs by using standard low speed communications circuits (both wireline and wireless) with up to 32 intersections per circuit, and maximizing the use of local intersection control equipment for both local and coordinated operations (and as a backup in the event of a communications failure).

This is an annual program which includes city-wide installation of:

- new traffic control signals and pedestrian corridors,
- audible pedestrian signals,
- roadside safety improvements,
- traffic calming measures,
- miscellaneous geometric improvements,
- traffic sign replacements,
- railway crossing safety improvements,
- traffic signals system enhancement program.

The Regional and Local Streets program includes the renewal and reconstruction of the City's streets, sidewalks, and lanes. The purpose of this program is to maintain the level of service, structural integrity, and rideability of the streets infrastructure network. This program also includes funding for improving granular surface roadways that are functioning as collector-type streets and/or have significant traffic volumes and will focus on Type II Road Oiling Surface Treatment as the upgrade.

See next page for program details.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

Undertake a full rehabilitation or replacement of river bridge, overpass, and related roadworks as well as construct a new pedestrian and cycle bridge added by Council in September 2008. Construction is anticipated to begin in 2010 and continue through 2011.

Future Payments - Maximum annual payments total \$19.8 million per year for the first ten years and \$14.8 million per year for the next twenty years. These amounts will repay the \$75.0 million in borrowing authorized by Council on September 30, 2009 as well as fund all payments to the successful proponent required under the project agreement. These amounts also cover annual operations and lifecycle costs of the facility as well as any internal contract administration and other costs. The successful proponent will be paid a substantial completion payment of up to \$75 million at the commissioning of the bridge. Any future payments above forecast may be funded from the amount available in the Capital Investment Fund. Any portion of the Future Payments not required by the project will be redirected to the Capital Investment Fund.

Extension of the Chief Peguis Trail from Henderson Highway to Lagimodiere Boulevard will provide new capacity to accommodate existing and projected travel demands, as well as reduce through traffic on the residential street system between Henderson Highway and Lagimodiere Boulevard. Construction costs are expected to total \$65.3 million for an at grade solution, which includes \$5.3 million in cash to capital for City upfront costs. Upfront costs include development of the preliminary conceptual design, engineering, traffic management planning, internal contract works, property acquisition, administration and other costs. External debt of up to \$30 million will replace, in part, private borrowing contemplated through the Design/Build/Finance/Maintain model.

Future Payments - Estimated annual service/financing payments total \$5.415 million per year for 30 years. Annual payments include repayment of any external debt as well as fund all payments to the successful proponent required under the project agreement. These amounts also cover annual operations and lifecycle maintenance of the facility, internal contract administration and other costs. The successful proponent may be paid a substantial completion payment of up to \$30 million at the commissioning of the facility. Any future payments above forecast may be funded from the amount available in the Capital Investment Fund. Any portion of the Future Payments not required by the project will be redirected to the Capital Investment Fund.

Construction is scheduled over a two year period in 2010 and 2011.

On September 13, 2009, \$54.7 million was announced in joint Federal-Provincial-City funding for the Waverley West Arterial Roads Project. The investment will allow for future economic growth in this area, decrease commute times and improve safety for motorists. Funding is made available under the Building Canada Fund - Major Infrastructure component, part of Canada's Economic Action Plan.

The project includes; the intersection of Kenaston and Bishop Grandin with a partial grade separation, the extension of Kenaston as a four lane arterial roadway from Bishop Grandin to PTH 100, an at grade intersection of the proposed Kenaston and PTH 100, the addition of two new lanes on the existing Waverley and the rehabilitation of the two existing lanes to connect with the four lane arterial roadway to the north, a new four lane section of Waverley that creates a realignment of the existing street in a westerly direction to the proposed Kenaston Blvd, a new at grade intersection of the new Kenaston and the realigned Waverley Street, the decommissioning of the at grade intersection of Waverley and PTH100, and a new 2 lane section of Waverley south of PTH100 to the new intersection of Kenaston and PTH100.

Funds adopted in the 2009 Capital Budget for the Kenaston Boulevard extension and Bishop Grandin intersection will be transferred to this project.

PUBLIC WORKS - GENERAL CAPITAL FUND

Waverley West (continued):

The asset management program being implemented in the Public Works Department is centered on the application of quality management principles to the operation, maintenance, and renewal of infrastructure. A primary objective is the development and implementation of methodologies to preserve the infrastructure and to identify the funding necessary for the long term preservation of the assets.

An objective of the asset management program is to extend this systematic structural quality management approach to all the infrastructure under the Public Works Department responsibility.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

The facility will be constructed in conjunction with the Public Works east yards development. It will store salt and treated sand for use in snow and ice control. Recent guidelines for the environmental management of road salt use recommends that road authorities across Canada increase protection for materials exposed to wind or precipitation in order to minimize loss of salt to the environment. Previous budget includes \$500,000 that was an authorized transfer in 2007 to the St. Anne's Road streets project.

Improvement of park amenities at various locations.

Chochinov Park has been identified as a priority in the Old Kildonan Ward. On June 24th Council approved a first call on the 2010 Budget in the amount of \$40,000 for this project.

2010 funding in the amount of \$75,000 has been committed to field renovations for the Transcona Nationals Football Club and will supplement funding the Club will receive from the Recreational Infrastructure Canada Fund.

On December 15, 2009 Council approved that \$25,000 from the Transcona Ward share of the 2010 Community Park Amenities fund be dedicated to the land assembly and construction of the Transcona Centennial Square Project. This funding of \$25,000 is now included in 2010 Transcona Centennial Square Project.

Local Improvement Capital Projects are those which are financed partly by a direct levy on the properties benefited (Property Owner's Share) and partly by a mill rate levy over the City-At-Large (City's Share). The program is governed by Local Improvements By-Law No. 98/72 and is subject to advertising and subsequent approval by the majority of ratepayers involved. The types of expenditure generally falling within this category are: paving of local streets and lanes; sidewalk and boulevard construction; installation of new watermains and sewers; ornamental street lighting and lane lighting.

The Community Incentive Grant Program, established by Council on March 6, 1985, was designed to encourage non-profit community recreation and sport organizations to undertake capital projects which would result in long-term benefits to the community at large in terms of improved service and facilities. On July 23, 2003, Council adopted expanded criteria for the Program.

On January 25, 2007, Council, with approval of the 2007 - 2012 five year Capital budget program, approved a 2% annual increase to the Community Incentive Grant Program. The Forecast assumes the continuation of this 2% increase beyond 2012.

The remaining cash balances of the CIG Programs from 2004, 2005, 2006, and 2007 were cancelled in June, 2009 but are proposed for re-budgeting in 2010. The proposed amount from these four years is \$1,296,000 and has been added to the 2010 program of \$1,478,000.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

Project funds are necessary to replace and furnish modern, safe, and accessible libraries that are able to accommodate the changing demographics and needs of library users. Funding in 2009 and 2011 have been designated for the amalgamation of two existing branches into one new facility assuming construction will occur in 2011 ready to open early 2012. Funding in 2013, 2014 and 2015 are for future library projects that could include, but are not limited to, amalgamations, joint use facilities, multi-use recreation and leisure facilities, and stand alone library facilities where a business case can be made (Recreation, Leisure & Library Facility Policy).

** Supported by class 2 estimate, see Appendix # 2.

Capital funding is required to replace aging library shelving and furniture that cannot be accommodated within the existing operating budget. The average age of Winnipeg's branch libraries is approximately 45 years old. Much of the shelving dates from the original opening of those facilities. The furniture and shelving needs to be replaced, in some cases for safety reasons, in order to ensure that library facilities remain safe, accessible and welcoming spaces for the changing needs of library users.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

The Neighbourhood Profiles initiative will build information technology infrastructure and partnerships to support inter-agency information sharing - increasing both the amount and quality of neighbourhood based information available to civic decision makers, community agencies, neighbourhood groups and individual citizens. Municipal governments throughout North America have begun to lead these types of enhanced information sharing/partnership initiatives. The neighbourhood profiles information will build upon the custom-built Stats Canada Census Data (organized by neighbourhoods) which is purchased every 5 years and constitutes the base of the neighbourhood profiles information system which is currently on the City's web site.

This project expands upon the partnership established between Community Services and Planning, Property and Development in the use of Amanda (BUILD) and other technologies including Geographic Information Systems, Web-based technologies, and the new Class Booking and Registration System.

This project upgrades antiquated and deteriorating computer systems to enable the continued operation of vehicle guidance and pesticide spray systems that were first established in 1999. The upgraded system will provide an electronic road map and will list current vehicle locations, the location of "anti-pesticide registrants", and a tracking of all spray operations. The system will also provide vehicle telemetry information via a wireless network so that real-time positions and current status of all spray vehicles is displayed at a central coordinating office.

** Supported by class 2 estimate, see Appendix # 2.

This capital program is required to support ongoing renovations of existing library branches that cannot be supported within the existing library operating budget. The average age of Winnipeg's branch libraries is approximately 45 years old. Improvements to facilities will include such things as replacing carpeting, flooring, painting, energy efficient improvements such as lighting and water conservation initiatives, furnishings, counters and workstation replacements that incorporate ergonomic design and universal design principles. In addition, funding will be used for undertaking minor and major construction projects in order to improve library facilities to meet the changing needs of library users.

The operating savings are due to the expectations of reduced utility charges from the installation of water conservation equipment and energy efficient lighting in 20 branches in the latter part of 2009.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

This project is to establish proper imaging and document management systems within the Community Services Department, which will allow the department to move to a paperless filing system that meets all City records management requirements. This will involve the filing and retention of both paper and electronic documents, including e-mail, court-related documents, etc.

The key objective of this project is to manage information through one comprehensive system that provides full information accessibility at one source or alternatively through one interface and is based on a sound foundation of technology and records and information management principles. This will enhance decision making and other business processes related to all aspects of service delivery to the public.

This capital project will help address workplace and public safety, health, and accessibility issues that are not part of the current service level agreement with Building Services.

Each year a portion of the funds will be utilized for installation of security systems, fitness equipment replacement, and facility amenities and accessibility projects within 13 indoor pools and 9 major recreation centres based upon established priorities. The new demands require security for staff while performing their duties and increased surveillance of non-staffed space within our buildings, both for patron safety and theft prevention within and immediately outside of aquatic and recreation facilities. The heavy use of fitness equipment and customer demands requires that a program of equipment replacement is implemented to ensure safety and meet contemporary needs.

Recreation facility amenities must be refurbished to meet public health and safety standards, regulation, and to enhance facilities to meet the needs of the public including accessibility (washrooms, change rooms, signage, public entranceways, etc.) and accessible family amenities (specialty change rooms).

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

Capital funding is needed to address three areas: 1. Signage needs on the exterior and interiors of library facilities, including electronic signs, for promotion of services and programs, are required to make libraries more visible to the community. 2. Safety issues need to be addressed in many libraries. Upgrading lighting, installing video monitoring technology, regular landscape maintenance, and other building upgrades are required to ensure that libraries remain safe and welcoming to the community and deter vandalism and graffiti. 3. Accessibility issues need to be addressed including adding exterior ramps, upgrading public and staff washrooms, improving wayfinding signage, and installing life safety apparatus to meet the needs of persons with disabilities.

Funding is required to purchase a new mobile library vehicle in order to expand library outreach services to inner city, high risk neighbourhoods. The vehicle purchased would be a walk-on vehicle that would be equipped with shelving for collections, space for programming and public access computers to provide access to information and conduct library functions. The Library Services Division will work in conjunction with Fleet Management to purchase the appropriate vehicle for this specialized service. The vehicle may be purchased from out of province because of the specialized nature of the vehicle.

Staffing to drive the vehicle and provide library services would be absorbed within the Outreach Services Unit. Any additional operating expenses (e.g. insurance, gas) will be identified in the 2011-2016 Capital budget submission.

Old infrastructure - During the 1950's, 60's and 70's, the City experienced significant growth with corresponding new infrastructure being built as a result of the baby boomer generation. Much of this infrastructure is 40 to 60 years old and requires renewal.

These project funds are necessary for new infrastructure to service growth and to replace existing aging infrastructure to meet citizen demand for contemporary recreational amenities. Replacement of existing facilities may result in consolidation or closing of existing facilities to meet the requirements in the Recreation Leisure and Library Facility Policy approved by Council on May 18, 2005. The City is working towards the consolidation of facilities in all future developments with a focus on developing multi-use facilities (e.g. libraries, water amenities, fitness, skateboard parks, basketball courts, arenas).

The funds requested in 2010 and 2011 are proposed for a new multi-use facility and are required to supplement the \$6.0 million in capital funding (\$1.0 million in 2009; \$5.0 million in 2011) included in the Library Replacement capital request. The total of \$2.250 million includes costs for the demolition of existing structures, design and construction of the facility, and parking lot development. Net utility savings (e.g. heat, electricity, water, repairs and maintenance) that would accrue from a new building will be determined and incorporated into the 2011 - 2013 budget.

COMMUNITY SERVICES - GENERAL CAPITAL FUND

Project Name: **Insect Control - Information System**

Department: Community Services
 Project: 62xxxxxyy

Capital Priority Rating: 3 - 2
 Service: Insect Control

This project will create a totally integrated Insect Control information system that includes: dispatch, inventory control, billing, tracking & reporting, larviciding and fogging. This system will enable Insect Control to more effectively coordinate their fogging and larviciding programs and use their products in a more efficient manner. The current system is comprised of disparate applications that have been created over the last 5-10 years. It is anticipated that since Insect Control is a very unique function, no "off the shelf" software will be available, therefore it will need to be custom built.

The Assiniboine Park Conservancy (APC) Development capital plan for 2010 includes:

- Nature Playground, Duck Pond, and Family Centre Project
- Design of the Rushing River water play component
- Planning and design of Phase 1 of Zoo Redevelopment - Polar Bear Rescue, Research, and Conservation Centre.

On January 27, 2010, Council approved that the APC be permitted to use adopted capital funds, if required, up to a combined \$3.63 million from the Assiniboine Park Conservancy Development Plan 2010 capital budget (\$2.849 million) and the Assiniboine Park Amenities Improvements / Development 2009 capital project (\$781K) to assist in completion of the Nature Playground and Duck Pond Project.

Also on January 27, 2010, Council waived the condition that the 2010 APC Development Plan capital funds be subject to confirmation of all other funding sources (Provincial, Federal government, and private donors).

WINNIPEG POLICE SERVICE - GENERAL CAPITAL FUND

Project Name: **Digital Recording - Interview Rooms**

This project is to replace an outdated PC based digital system required for recording interviews. This was a legislated requirement that occurred in 2005 which will see current equipment obsolete by 2012. Digital recording is now required in interview rooms and it appears that the Crown will require monitoring of all prisoners while in a police station. Therefore provision for video surveillance must be made in all police buildings.

WINNIPEG POLICE SERVICE - GENERAL CAPITAL FUND

This Project consists of a number of improvements to and/or consolidation of various Winnipeg Police Service units' facilities. These improvements will address the operating requirements of a modern police force in a metropolitan area the size of the City of Winnipeg. Areas impacted include, the Evidence Control Unit, the Technological Crimes / Identification Unit, the Street Crime Unit, and the Central Processing Unit. These significant aspects of the Service require updated modern facilities to maximize operating processes. A number of other operating units will also be impacted by this consolidation.

** Supported by Class 3 estimate, see Appendix # 2.

WINNIPEG POLICE SERVICE - GENERAL CAPITAL FUND

Project Name: **Winnipeg Police Service Communications**

Department: Winnipeg Police Service
 Project: 22XXXXXXXXY

Technological changes in wireless technology, 911 issues, Voice over Internet Protocol (VoIP), deaf teletype, and data networks require replacement of outdated systems and equipment. This project represents:

1. A change from the current Winnipeg Police Service (WPS) wireless data network to a Mesh Network Solution;
2. Replacement of the existing phone system;
3. Miscellaneous upgrades related to the 911 alternate site. Legislation requires the WPS to provide an alternate communication backup site to ensure continued service should equipment fail during an emergency. Specifically, legislation requires that every Public Safety Answering Point (PSAP) service must have a facility that (a) has a risk assessment carried out in accordance with guidelines approved by the Minister; and (b) can, within one hour, be operational as a PSAP facility to the extent of 80% of the capacity of the PSAP service's primary PSAP facility.

** Supported by Class 3 estimate, see Appendix # 2.

WINNIPEG POLICE SERVICE - GENERAL CAPITAL FUND

Project Name: **Wireless Emergency 911 Upgrade**

Department: Winnipeg Police Service
Project: 2200000608

Capital Priority Rating: 3 - 4
Service: Police Response

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

Approximately 40% of emergency 911 calls are made by persons using cellular phones and this is projected to increase in the future. Research indicates that approximately 15% of callers are unable to provide their location or the call is terminated before the operator can obtain proper information. When a caller is using a land line phone the Police Service can identify the location and number and affect an appropriate response, but is unable to identify the location should the caller be using a cellular phone. This project will enable the identification of the phone number and location of the caller reducing the time required to respond.

Other technologies such as Voice over Internet Protocol (VoIP) are also becoming more common and in the future the current 911 phone system will not be able to effectively handle these calls as the current system will have exceeded its useful life.

** Supported by Class 1 estimate, see Appendix # 2.

WINNIPEG POLICE SERVICE - GENERAL CAPITAL FUND

Project Name: **Automated Fingerprint Identification System (AFIS) Replacement**

Department: Winnipeg Police Service

A new Automated Fingerprint Identification System (AFIS) was installed in late 2007. Life expectancy of the equipment is approximately 5 years after which time the system hardware may become obsolete and subject to reduced and/or withdrawn maintenance support. If available, maintenance will be more costly as the system ages.

** Supported by Class 1 estimate, see Appendix # 2.

The Police Priority Dispatch System (PPDS) software is a set of protocols designed to standardize and codify the operation of law enforcement dispatch. It is designed to provide safe, effective, and efficient police operations through scene assessment, officer safety issues, and the identification of appropriate police response. The PPDS also includes a quality assurance software package. The PPDS is recognized by the National Academies of Emergency Dispatch, which is the world's recognized standard setting and certification body for emergency dispatch. This project addresses recommendations reported in the June 2002 City of Winnipeg Audit Department's in-depth review of the Winnipeg Police Service Communication Centre. The expected useful life of this project is 25 years.

** Supported by Class 1 estimate, see Appendix # 2.

The mobile laptop technology in cruiser cars needs to be replaced every 5 to 6 years due to the obsolescence of this equipment and the harsh environment to which they are subjected. Currently there are about 200 mobile laptops in cruiser cars at a cost of \$5,000 each. Additional costs are for modem upgrades, brackets and mounting equipment used to attach the laptops to the vehicles. Ergonomically placed laptop computers are critical for prevention of back injuries to police officers.

With increasing demands for capturing information when dealing with the public, it appears that at the moment the best way to accomplish this is through an officer mobile video system. The mobile system would be attached to an officer and record all audio and video for a particular interaction. It is estimated that \$1,000,000 would be required to outfit approximately 800 officers with this equipment along with storage equipment to archive and maintain the data. It is expected that technology will progress in this area to provide better alternatives when the purchase date arrives. Additional funding of \$1,000,000.

The current crime analysis system will have reached the end of its life cycle in 2014 and will require upgrading. The replacement of the Integrated Child Exploitation system software will also be required. The Service also requires a new Case tracking system for Major Crimes and an Electronic Collision Reporting System to automate the reporting of collisions to government agencies. Additional request of \$1,460,000 includes:

Replacement of Crime Analysis System to help determine trends in crime activities	660
Integrated Child Exploitation System Software	500
Case Tracking System for Major Crimes	150
Electronic Collision Reporting System	150
	1,460

On January 27, 2010, Council approved the establishment of a Winnipeg Police Service Flight Operations Unit (Helicopter) subject to approval of new incremental funding from the Province of Manitoba for all ongoing annual operating costs, estimated at \$1.3 million in 2010 plus cost increases thereafter.

Additional positions would be required and are included in the operating budget estimate noted above. The initial capital cost to purchase the helicopter, a hangar to house the unit, and all related operational equipment is estimated to be \$3.492 million.

The purchase of a Police helicopter is an enhancement to existing resources and will produce tangible and intangible benefits to the Police Service and to the citizens of Winnipeg. Benefits of acquiring a helicopter include pursuit management and related liability reduction, increased public safety, officer safety, higher clearance rates, freeing up of other "on the ground" resources and the ability of the aerial support to serve as a "force multiplier" (a tool that allows 1 officer to accomplish the work of many).

** Supported by Class 1 estimate, see Appendix # 2.

The 2009 Adopted Capital Budget and 2010 to 2014 Five-Year Forecast approved by Council on December 16, 2008 included estimated budget required to procure two district stations including, potentially, property and purchasing the necessary furniture and special equipment needed at each station.

On July 18, 2007, Council approved the award of a public-private partnership (3P) contract for the development and operation of the East District Police Station based on a 30-year lease term.

The above estimates have been prepared by the Public Service based on the 3P contract for the East District Police Station. Costs include estimated procurement, furniture, and special equipment, plus construction inflation and timelines for the development of the district police stations.

The above annual cash flow estimates represent lease payments and include technical maintenance, but not utility and other operating maintenance expenses. This capital detail sheet was prepared by Planning, Property and Development.

* Note: "Previous Budget" amount includes funding of \$53.534 million identified as Public Private Partnership and \$3.187 million of Cash to Capital. The Cash to Capital was reduced from \$8.725 in 2009 due to closing of prior year funding of \$5.538 million.

** Supported by Class 3 estimate, see Appendix # 2.

This project represents the Winnipeg Fire Paramedic Service (WFPS) program for facility replacement, relocation, and improvements.

To deal with an infrastructure deficit identified in 2008, the WFPS proposed a two phase approach, with Phase I identifying stations most in need of improvement or replacement. In addition, 2010 includes \$300,000 for the construction of a Pump and Aerial Test Facility at 2546 McPhillips Street.

Phase I

Station # 11 Relocation (presently at 200 Berry Street) - previously approved.

Station # 12 Relocation (presently at 1710 Grosvenor Avenue)

Station # 18 Replacement (5000 Roblin Boulevard)

Station # 27 New Station (South east quadrant of the city)

Phase II

Station # 19 Relocation (presently at 320 Whytewold Road)

Station # 15 Relocation (presently at 1083 Autumnwood Drive)

Station # 4 Replacement (presently at 150 Osborne Street)

Station # 13 Relocation (presently at 700 Lilac Street)

New Station (Waverley West Development)

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

This is an on going office automation program. Its primary goals are to deliver cost-effective solutions that provide convenient customer service to our citizens and to improve organizational efficiencies. We can achieve these goals through expansion of online services, office/workflow automation, re-engineering of legacy systems, electronic documents management, and systems integration (e.g. database synchronization) between our own applications and those of other departments.

It is anticipated that maintaining and improving a solid technological framework can provide the basis for organization improvements that increase efficiency and reliability. In order to improve service delivery, we strive to make information more accessible, streamline workflows, and reduce any duplication of efforts. It can also be argued that some initiatives such as electronic document submissions are not only citizen-friendly but environmentally responsible as well.

A general program of ongoing system improvement is suggested and is seen as reasonable to ensure the continued longevity and viability of the City's investment in office automation.

This program supports the acquisition of riverbank lands for the City's linear parkway system and promotes the use of the City's rivers and riverbanks by facilitating public access to rivers and riverbank lands and encouraging the use of Winnipeg rivers for transportation and recreation through the provision of boat launches, docks, pathways, and other accessibility improvements.

Funds provided are for implementation according to the prioritized river segments adopted by Council as opportunities present themselves and as needs dictate. The current top six priority parkways include North Winnipeg, South Winnipeg, Kildonan, Boni-Vital, North Assiniboine, and South Assiniboine, in no particular order.

2008 Projects

Elzear Goulet Memorial Park (Boni-Vital Parkway) - 100% Complete

Bois-des-Esprits Primary Pathway (Seine River Greenway) - 50% Complete; Project to be completed Summer 2009

St. John's Park Pathway (North Winnipeg Parkway) - 75% Complete; Project to be completed Summer 2009

Norquay to Alfred Riverbank Trail (North Winnipeg Parkway) - 75% Complete; Project to be completed Summer 2009

2009 Projects

Woodhaven CC to Sturgeon Road Riverbank Trail (Sturgeon Creek Greenway) - Tender for Construction Fall 2009

Riverbank Parkway Trailheads, Kiosks & Signage - Tender for Construction Fall 2009 & Spring 2010

2010 Proposed Projects

South Winnipeg Parkway - Glasgow to Togo connection

North Assiniboine Parkway - Omand Park to Assiniboine Park connection

Riverbank Parkway and Greenway Signage and Trailheads

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

The funds are required to supplement investment being received from Veterans Affairs Canada (VAC) under a joint funding project to renovate the Brookside Cemetery. VAC have so far invested \$60k in 2007, \$120k in 2008, \$200k in 2009 and a discussion of \$150k average for further years to complete the project; further funding is promised but not guaranteed for the next 10 years.

In addition, the Capital funds are required for the purchase and installation of columbaria and other cremation interment facilities at City cemeteries. In the past the investment in columbaria units has generated revenues in excess of 200% of the investment sum. The Brookside Cemetery needs to have installed a cremation garden which will assist in increasing revenues.

Funding is required to repair roadways at Brookside and Transcona Cemeteries, install new storage buildings and interment sections in Brookside Cemetery.

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

Project Name: **Downtown Enhancement Program**

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

The project objective is for functional and aesthetic improvements and required infrastructure upgrades to public spaces and streetscapes in the Downtown and Exchange District National Heritage Site. The funds will enhance accessibility, safety, comfort and urban design quality of pedestrian environments and fulfill the commitment to the "Downtown First" philosophy. The Downtown Winnipeg Urban Design Guidelines provide the guiding principles to support design and enhance the liveability of Winnipeg's Downtown Urban environment. The program will support and develop ongoing partnership opportunities for future development and redevelopment, and projects such as: Old Market Square, Broadway, Hydro Tower, Millennium Library Park, Bonnycastle Park, Assiniboine Riverwalk, etc. Projects and funding have traditionally relied upon partnership opportunities and have supported private redevelopments.

Funding will also be used to support the National Historic Site Designation of the Exchange District.

These public open space and streetscape improvements are over and above and exclusive of work assumed by the Public Works, Transit, and Water and Waste Departments who are responsible for existing infrastructure such as street trees, planters, boulevards, accessibility concerns, and required maintenance.

Priorities from 2010-2015 include Old Market Square Phase I, II & III, Manitoba Hydro Precinct, Bonnycastle Park, Assiniboine Riverwalk, Downtown and Exchange District Pedestrian Facilities Enhancements, Broadway and the Edmonton Street Pedestrian Corridor.

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

Downtown Enhancement Program (continued):

After adoption of the 2010 Capital Budget, Council approved (January 27, 2010), a new capital project "Old Market Square Redevelopment" with a total budget of \$1.25 million as detailed below:

- transfer funding from Downtown Enhancement Program.	300,000
- contribution from Government of Canada.	250,000
- funding from Centre Venture Development Corporation.	200,000
- commitment from Winnipeg Foundation.	500,000
	<u>1,250,000</u>

The City will provide interim financing of \$200,000 pending the receipt of contributions from the Winnipeg Foundation. Council also approved (February 24, 2010) an amendment to 2009 Downtown Enhancement Capital Program Budget by transferring \$217,500 from the Planning, Property and Development Department's Non-specified Capital Account to the 2009 Downtown Enhancement program in order to complete the Waterfront Drive Public Art project. Accordingly, the Previous Budget amount has been restated.

The work focuses on the 13 (of the 15) Business Improvement Zones, the designated 6 image routes and 14 neighbourhood main streets. The funds will be utilized to initiate, partner and implement streetscape and open space initiatives and enhance accessibility, safety, comfort and urban design quality of pedestrian environments and promote the City of Winnipeg's image and safety. These enhancements are over and above and exclusive of work assumed by the Public Works Department that includes curb, street and sidewalk repairs, and required maintenance of existing infrastructure including shrub, tree and turf replacement.

The capital works will include the City's Universal Design Policy, adopted by Council in 2001, and the Principles and Guidelines for Tree Planting on Regional Streets.

This enhancement program will continue in consultation and collaboration with the Winnipeg BIZ Association and in partnership with the private sector to achieve the goal statements of: 1) to support Neighbourhoods Main Streets (BIZ's) - provide anchors for neighbourhoods and character districts, 2) to provide a vibrant environment for both businesses and residents to enhance the image and vitality of our neighbourhoods and our city, 3) to ensure the renewal and to sustain the infrastructure of Business Improvement Zones and of Image Routes to enhance the image and vitality of our community, of our business, residential and adjacent communities.

This enhancement program takes the form of decorative medians, pedestrian lighting, banner poles, special entry nodes, special pavement treatments, character signage, plant trees and site furnishings including benches, waste receptacles, tree grates, tree guards, information kiosks, and bicycle racks to support the Neighbourhood Main Streets, etc.

The City of Winnipeg through the enhancement program will work with the proponents by having a conceptual planning and design development of the area done in phase 1. Phase 2 & 3 are the tender and construction phases. The program will try to have up to three larger projects moving forward at any given time.

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

Image Route Enhancements / Streetscaping (continued):

2010 - Transcona BIZ (Major Project Revitalization) / St. James Village BIZ (Concept Plan Development), West Broadway BIZ (Concept Plan Development), Academy Road BIZ (Pocket Park Project & Repair Street Elements).

2011 - St. James Village BIZ (Major Project Revitalization), West Broadway BIZ (Major Project Revitalization), Osborne South BIZ (Concept Plan Development).

2012 - St. James Village BIZ (Major Project Revitalization), West Broadway BIZ (Major Project Revitalization), Osborne South BIZ (Major Project Revitalization), Norwood Grove BIZ (Concept Plan Development).

On September 24, 2003, Council approved in principle the Public Art Policy of the Mayor's Task Force on Public Art in Winnipeg and directed that the Chief Administrative Officer work in conjunction with WAC (Winnipeg Arts Council) to develop the necessary procedures for implementing the direction of the policy, including but not limited to those areas relating to governance and funding. Council adopted a Public Art Policy on October 27, 2004.

Projects underway:

- Exchange District BIZ kiosks collaboration
- "With Art" Projects: Winnipeg Gateway & Transit, The Eritrean Community, Dorchester House, Immigrant Refugee Community Organization of Manitoba
- Artist-in-Residence Project: St. Boniface Museum
- Maison des Artistes, Jardin des Artistes - Les Amoureux

Projects implemented:

- "With Art" Projects: Bishop Grandin Greenway Environmental Sculptures, Manitoba Urban Native Housing Association, Spence Neighbourhood Association, Manitoba Maternity Care Action Network, Elwick Community
- Artist-in-Residence Projects: City Archives "Souvenirs", Living Prairie Museum "Lost Landscape"
- Vimy Ridge Memorial Park
- Millenium Library "The Illumination"
- Downtown BIZ bike racks
- Assiniboine Park Sculpture "Agassiz Ice"

The development of Transcona Centennial Square is part of the Downtown Streetscape Revitalization Strategy for Transcona, the intent of which is to evaluate and identify the immediate streetscape concerns of the downtown area and provide a direction for the revitalization and long-term viability of downtown Transcona's streetscape. Downtown Transcona encompasses three blocks of Regent Avenue from Winona to Kanata, and three blocks each of Day Street and Bond Street from Victoria Avenue to Pandora Avenue.

A master plan was developed which facilitates the creation of a "home town" image for the revitalization of downtown Transcona. The master plan implements conceptual streetscape improvements and a proposed Transcona Centennial Square combined with programmed renewal of existing infrastructure. The proposed streetscape elements will help to revitalize downtown Transcona by providing a consistent identifiable and marketable visual character.

Transcona Centennial Square is proposed, as an integral initiative of the Downtown Transcona Revitalization Strategy, to celebrate the 100th anniversary of the incorporation of Transcona as a town in 1911.

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

Transcona Centennial Square (continued):

Council approval of this project on December 15, 2009 is subject to:

- (1) a minimum provincial funding commitment of \$500,000 as noted above;
- (2) funds of \$290,000 being returned to the Land Operating Reserve from the future sale of land(s) in the Transcona Ward, principally the sale of all or part of the lands known as 401 Pandora Avenue West;
- (3) \$150,000 from existing funds previously committed to capital projects for Transcona Centennial Celebrations are now dedicated to the land assembly and construction of the Transcona Centennial Square Project;
- (4) \$25,000 from the Transcona Ward share of the 2010 Community Park Amenities fund being dedicated to the land assembly and construction of the Transcona Centennial Square Project;
- (5) \$35,000 from the Transcona Ward share of the Land Dedication Account being dedicated to the land assembly and construction of the Transcona Centennial Square Project; and
- (6) the project information as set out in the Transcona BIZ Downtown Streetscape Revitalization Strategy.

In 2000, the Riverbank Stability Characterization Study identified stability conditions of 106 km of City owned riverbank property which comprises approximately 45% of all such property within The City of Winnipeg. Inasmuch as costs to effectively stabilize all City owned river and creek banks requires a significant funding commitment of \$80 million (2000 dollars), "first phase" priority sites were established in the report for purposes of the City implementing stabilization along the most critical sections of riverbank. Four priority sites have been stabilized to date, namely, Annabella Street to May Street (2003), St. John's Park (2006), Bunn's Creek (2006) and St. Vital Park (2008) at a total cost of approximately \$4.0 million.

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

Riverbank Stabilization - Physical Asset Protection (continued):

The Planning, Property & Development Department, in collaboration with the University of Manitoba, developed a GIS Riverbank Asset Management System which systematically updated the priority sites listing in 2009 for all City owned riverbank property based on assigned engineering attributes as follows:

Site	Amount
Red River - Churchill Park (Montague to Cockburn)	2,620,000
Red River - King's Park (Outside Bend)	2,770,000
Red River - Guay Park	1,110,000
Red River - King's Park	1,460,000
Red River - Minnetonka at River Road	430,000
Red River - River to Rivergate	1,780,000
Red River - Canoe Club	3,570,000
Red River - St. Mary's at Perimeter	3,610,000
Red River - Crescent Park	1,010,000

The Building Communities Initiative (BCI) is a capital expenditure program that invests in community infrastructure in Winnipeg's neighbourhoods. The program's goals are to improve living conditions in Winnipeg's neighbourhoods where capital improvements in parks, community facilities, municipal infrastructure, and crime prevention initiatives will have lasting, long-term benefits to the neighbourhood and the larger urban community.

*Amount has been adjusted to reflect previous funding for BCI I and has been reduced \$400,000 as a result of December 16, 2008 Council Recommendation.

A regulatory requirement during renovations is the removal of hazardous material from existing facilities. An inventory of asbestos within City buildings has been completed. Work is performed when other building renovations are planned or when some other physical disturbance of asbestos covered building components occurs. This money may also be used to remove mould and other hazardous materials during building renovations, which often is identified at the same time as the asbestos.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

The roofs on many of the buildings in the Civic Accommodations portfolio are nearing or beyond the end of their useful life. Ongoing maintenance costs for these roofs are continuing to rise. Operating budgets do not provide adequate funding for the replacement of roofs. Replacement of roofs will also provide an opportunity to upgrade roof insulation, which will result in energy savings.

Projects for 2010 include the following:

2546 McPhillips Street	120
700 Assiniboine Park Drive	230
1539 Waverley Street	170
Various	280
Total	800

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

CIVIC ACCOMMODATIONS

Project Name: **Fire Safety Upgrading - Various Locations**

Department: Civic Accommodations
Project: 6331000410

Capital Priority Rating: 3 - 4
Service: Property Asset Management

AUTHORIZATION	Previous Budgets	2010 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total
			2011	2012	2013	2014	2015		
Project Costs (\$000's)	N/A *	500	200	200	200	400	300	1,300	1,800
Financed by:									
Cash to Capital (Equity in Capital Assets Fund)		500	200	200	200	400	300	1,300	1,800

Financed by:								
Cash to Capital (Equity in Capital Assets Fund)	500	200	200	200	400	300		1,800

NET OPERATING IMPACT	2010	2011	2012
Revenue increase/(decrease)	15	6	6
Less:			
Operating expenditures increase/(decrease)			
Debt and finance charges increase		48	70
SURPLUS/(DEFICIT)	15	(42)	(64)

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

Renovations within existing buildings are becoming more expensive as the existing buildings do not meet the fire protective design requirements of current building codes. The present fire safety controls in buildings are aging and require replacement or upgrading to current standards. Legally required/essential: code and life safety requirements.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

CIVIC ACCOMMODATIONS

Project Name: **Energy Conservation**

Department: Civic Accommodations
Project: 6331000610

Capital Priority Rating: 3 - 4
Service: Property Asset Management

AUTHORIZATION	Previous Budgets	2010 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total
			2011	2012	2013	2014	2015

Note: *Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges*

The HVAC systems in many of the buildings in the Civic Accommodations portfolio are believed to be nearing the end of their useful life or are not operating to regulatory requirements for indoor air quality. Upgrading of the HVAC systems is expected to result in significant energy savings.

Projects for 2010 include the following:

251 Donald Street - \$900k

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

CIVIC ACCOMMODATIONS

Project Name: **Building Envelope - Evaluation and Emergency Repair**

Department: Civic Accommodations
Project: 6331001212

Capital Priority Rating: 3 - 3
Service: Property Asset Management

AUTHORIZATION	Previous Budgets	2010 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total
			2011	2012	2013	2014	2015

Debt and finance charges increase			
SURPLUS/(DEFICIT)	-	-	6

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

Building envelope concerns have been identified in a number of city-owned buildings. There is a requirement to establish the condition of the building envelopes for all buildings within the Civic Accommodations portfolio. The project will include a study to establish budgets for future building envelope retrofits, and the repairs for priorities identified in the study.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

CIVIC ACCOMMODATIONS

Project Name: **Elevator and Escalator Repair**

Department: Civic Accommodations
 Project: 633100xx10

Capital Priority Rating: 3 - 3
 Service: Property Asset Management

AUTHORIZATION	Previous Budgets	2010 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total
			2011	2012	2013	2014	2015

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

The elevators and escalators in many of the buildings in the Civic Accommodations portfolio are nearing or beyond the end of their useful life. Replacement of the old elevators and escalators will provide more universally accessible buildings, and the upgraded systems will result in energy savings.

Projects for 2010 include the following:

510 Main Street	375
365 Main Street	300
299 Fort Street	75
Other	50
Total	800

CIVIC ACCOMMODATIONS

Project Name: **510 Main Street - Generator Set Replacement**

Department: Civic Accommodations
Project: 633100xx13

Capital Priority Rating: 3 - 3
Service: Property Asset Management

AUTHORIZATION	Previous Budgets	2010 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total

The existing generator set in the City Hall complex is coming to the end of its useful life for several reasons. It was installed when the City Hall complex was constructed in 1964. Maintenance costs are rising and there is a possibility that the existing generator may not function as intended in a future power outage. Present Building Codes require additional equipment, needed for fire and life safety purposes, to be supplied with backup power from a generator. Upgrades to the fuel delivery system are also required by current Codes. Mission critical operations within the City Hall complex require backup power which exceeds the capacity of the existing generator set. These mission critical operations include the Emergency Operations Centre, Central Control, and select corporate computer equipment.

CIVIC ACCOMMODATIONS

The redevelopment of the upper courtyard at City Hall was completed in 2004. The lower courtyard was not completed at that time due to limited budget funding. The existing ramps from street level to the upper courtyard do not meet current universal accessibility requirements. The lower courtyard at street level has also deteriorated, does not comply with the City's universal design standards and requires upgrading. There are also outstanding building code/safety issues remaining to be addressed. A conceptual design has been developed and cost estimates prepared for the project.

** Supported by class 3 estimate, see Appendix # 2.

CIVIC ACCOMMODATIONS

Security has been noted as an ongoing concern within the Civic Campus area. Enhanced security in the Civic Campus area will reflect the evolving risk management needs to protect City staff and property from potential injury and loss, reduce legal liability and will assist to help attract the public to the downtown area. Possible upgrades may include exterior lighting, security system improvements, and video surveillance.

BUILDING SERVICES

Project Name: **Community Centres - Refurbishing and Improvements**

The replacement of hockey pen light standards at various locations has been determined to be the City's responsibility under the Universal Funding Formula (UFF) with the Community Centres. As such, this program is intended to replace hockey pen light standards and bases in consideration of workplace safety and health issues, utilization of such hockey pens, number of pens at the specific site, and the Recreation and Leisure Facilities (RALF) policy context amongst other things.

The City Clerk's Department has a corporate responsibility for records management services and archives as outlined in the City of Winnipeg Charter. To date, temporary record storage has taken place at 380 William Avenue. The facility is now at maximum capacity, forcing departments to utilize private records storage centers. Departments are bound by by-law to keep records for a specific period of time.

In order to provide a more centralized and more cost effective records management storage services, the City Clerk's Department will renovate a portion of a city owned warehouse at 311 Ross Avenue to accommodate records storage. The area will remain a warehouse but requires some repairs to floors and walls, upgraded lighting and security, and installation of shelving. The records center opened in August of 2007.

Ongoing upgrades are expected at the 5 year mark to meet anticipated demand for corporate records.

** Supported by class 1 estimate, see Appendix # 2.

In accordance with the Department's statutory responsibility to compile a List of Electors and convene elections, every four years the Department ensures the renewal of equipment and systems used in Election processes.

As some of the systems are only used every 4 years, they require either extensive renovations or complete rewrites to allow them to function with changed systems, networks and databases.

In the past, this has involved corporate mainframes and a large number of staff from Corporate Information Technology Department. The City Clerk's Department will, for the 2010 Election, ensure systems are operational using in-house resources and contract personnel, and by purchasing ready made systems from election partners such as our voting machine partner Election Systems and Software and our voters list partners Elections Canada and Elections Manitoba.

Systems to be upgraded / revitalized for the 2010 Election include the List of Electors system, GIS mapping systems, election night reporting systems, and web sites, especially those utilizing the Internet for more effective communication with candidates, media and the public.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

The City Clerk's Automated Voting Machine system was purchased in 1995 and was used through the 2006 General Municipal Election. While the current system is still functional, obtaining replacement equipment and parts, as well as support is becoming more and more difficult, as technology evolves and the company that manufactures the system moves towards newer technology.

Use of the system to meet the demands of the public and candidates in terms of reporting and other facets is also becoming increasingly difficult as the system ages and becomes more difficult to hook into City of Winnipeg networks / systems as they change.

Access concerns for the physically challenged and the public's desire for new voting technologies must also be addressed. A new voting system using up to date digital technology will be required for the 2010 General Municipal Event.

This will require extensive research and a Request For Proposal process started in late 2008, early 2009, with purchase of the new system to occur in late 2009 or 2010, leaving 10 months of setup time for the 2010 event.

The City Archives, located at 380 William Avenue, was opened as the City's first library in the early 20th century. The building currently serves as a repository for storage of the City's historical information and has done so since 1977. The structure was designated a heritage building in 1984. Protected elements include the front rooms on the first and second floors, the building exterior and the iron fence surrounding the property.

The building until recently acted as the City's record centre. Deflection of second floor beams and a potential for collapse have resulted in much of the records storage / weight being removed from the second floor of the building and transferred to 311 Ross. A report by Crosier Kilgour has identified several issues with the building including the need to address the load bearing capacity of the second floor, ensuring appropriate repairs to the Tyndall Stone facade, ensure adequate waterproofing for the roof and foundation, as well repair / replacement of windows. Also identified are a lack of fire suppression systems and lack of wheel chair ramps in the building. These issues will be addressed over a series of years based on priority with the final year of funding being 2015.

The most pressing immediate need is repair of the iron fence surrounding the property. Due to the historic designation of the property and the fence, the fence needs to be rebuilt in the same manner as existing, rather than simply be removed or rebuilt in wood.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

** Supported by class 3 estimate, see Appendix # 2.

CITY CLERKS - GENERAL CAPITAL FUND

Scheduled for unveiling in 2010, the Variety Heritage Adventure Park will be a unique, world-class play park. It will feature a variety of interactive play structures and will include an outdoor performance area for interpretive programs and presentations. Key to the program design will be accessibility for children of all abilities.

This grant of \$250,000 is to be provided to Variety, the Children's Charity of Manitoba as the City's contribution to develop an accessible park at The Forks National Historic Site.

** Supported by class 1 estimate, see Appendix # 2.

This grant of \$100,000 is to be provided to the Manitoba Children's Museum to support their capital renewal project.

Project plans for renewal include:

- a new Welcome Centre, providing upgraded admission amenities, as well as providing needed safety and security for the youngest visitors and serving as a gathering place;
- 12 innovative, creative, multi-level galleries in an holistic environment, offering open-ended play and discovery opportunities;
- a fully dedicated toddler area to meet the needs of our youngest and most treasured adventurers; and
- a multi-functional Arts and Exhibition Centre for travelling exhibits, special events, performances and rentals along with three educational classrooms for programs and workshops.

** Supported by class 1 estimate, see Appendix # 2.

This grant of \$50,000 is to be provided to Le Cercle Molière to support the construction of a new 19,000 square foot theatre facility.

The new theatre will be designed for small audiences of up to 125 people. With maximum flexibility in mind, non-fixed seating and platforms will be designed to allow unorthodox stage configurations as required by each production. State-of-the-art acoustic, lighting and sound systems will provide the infrastructure for a new era of exploration and artistic excellence.

** Supported by class 1 estimate, see Appendix # 2.

The ability to accurately and consistently report data from many applications is becoming increasingly important. The Data Warehouse/ Business Intelligence initiative will provide the base from which many application systems and their data can be brought together to provide reporting capability as the City moves toward a more service based view of its operation.

Included in this program is a project to build a single repository of data to enable the City's systems to link with the Provincial system for the sharing of common Business Identification Numbers. This starts the process of consolidating all business data in the city, resulting in cost-savings and efficiencies. The initiative to a common Business Identification Number satisfies the Red Tape Commission's recommendation number 6.1 - Standardized Business numbers.

E-Government supports projects that use information technology to support the provision of e-government services. It covers a broad spectrum of initiatives that typically fall into two main categories: 1. Providing better service to citizens (i.e. 24 X 7, self-service options); and 2. Providing services more efficiently and effectively, translates into productivity gains and reduced costs. These funds will be used to provide applications to improve the City's Internet site and to provide better and new electronic services to citizens. In addition, the funds will be used to purchase software to support the development of citizen self-service applications on the web. This software includes content management software, portal software, and single sign-on and authentication software.

Communications Network Infrastructure is the implementation and enhancement of the backbone network infrastructure which connects the decentralized computers in Civic Departments. This is a high speed infrastructure to enable the sharing and distribution of corporate information across departments with more management, control, flexibility, and ease of use at the department level. Information could be processed and stored on lower cost computers in or for departments and made accessible city-wide through the network infrastructure. The infrastructure would extend the availability of applications such as E-mail and internet to all departments.

Network Computing Initiatives are emerging multi-tiered infrastructure, internet/intranet servers and other similar network based computing technologies that are required to implement both corporate and departmental initiatives in support of shared quality customer information services. Specific initiatives include hardware, software, and physical facilities protecting the City's networks and key systems from single site disasters, security products to address the ever growing computer virus and "spam" outbreaks, and re-organization assistance to efficiently manage new environment paradigms.

The Assessment Automation project includes a number of initiatives focused on improving the efficiency and the effectiveness of the assessment and taxation functions through the appropriate use of automation. Examples of specific initiatives that are ongoing include the dynamic linkage between Computer-Aided Mass Appraisal (CAMA) and Geographic Information System (GIS) so that access to assessment data can be provided through the corporate spatial platform; the development of enhanced valuation systems for specific property types; implementation of an electronic document and records management system; acquisition of property images including high resolution aerial images; and integration of PADView with other key applications.

The Assessment Automation project is an ongoing project. The subprojects within the Assessment Automation project are usually complete within a two-year timeframe. Subprojects completed in the past year include website modifications for online data collection, development of web appraiser tools, and CAMA Commercial Component Enhancements. CAMA is the core valuation system for the Assessment and Taxation Department.

The City of Winnipeg and the Transit Department have long recognized the importance of ensuring the security of their infrastructure and operations.

A three-year program was established to address important security priorities. Winnipeg Transit has accessed this program and has received a consultant's report to assess potential risks to Transit's infrastructure and operations and to develop measures to reduce these risks.

This project anticipates that high security risks identified by the study will require immediate attention.

Estimated useful life - variable depending on the project.

TRANSIT - TRANSIT SYSTEM FUND

The existing fare collection system is many decades old and limits flexibility in the type of fares that can be offered passengers. A review will be conducted to consider the best options suited for the City's public transit system. This capital project will authorize capital investments that may include:

- mechanizing the existing transfer dispensing system and acquiring replacement mechanical fareboxes. Among other benefits, this will provide more consistent application of the Power Hour transfer.
- smart card and proximity card will permit more extensive use of prepaid fares, accommodate more complex fare systems, provide more efficient processing and reporting of fares, and provide a better defense against potential counterfeiting of monthly and weekly passes. As the technology is still developing and the public continues to accept this as a means of paying for goods and services, this part of the project will commence after 2010.

Estimated useful life - Twenty years.

The Innovative Transit Program provides for various projects which are not normally funded through the operating budget or other areas of the capital budget. Various projects such as transit terminals at shopping centres, passenger shelters, improved waiting amenities at major bus stops, park and ride lots, bus priority measures, handi-transit trip confirmation system, automated transit scheduling system, and the Winnipeg Transit internet site provide an enduring benefit to the department and have been funded under this program.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

Transit's operations are housed out of two primary facilities, the Fort Rouge complex and the North Main garage. These facilities are approximately 40 and 80 years old respectively. The department funds the maintenance of the facilities through the operating budget. However, it is becoming clear that significant funding will be needed shortly to respond to the growing need for large capital investment. The previous budget will fund the first step of this project and will consist of a study of the most cost effective approach to solve the building age and space constraint problems.

It is anticipated that the recommendations from the study will result in this becoming a multi-year capital project. Any future funding authorized would be used to provide for major capital refurbishment and investment that the operating budget cannot support. Beginning in 2012, a significant amount of capital will be required, including the replacement of North Garage.

Estimated useful life - Dependent on the specific projects approved.

This is an annual program of carrying out repairs or improvements to shorelines and facilities of existing stormwater retention basins including, but not limited to, rock revetment, gate chambers, fountains, and maintenance equipment launching ramps. Rehabilitation and/or upgrading of the retention basins will reduce annual maintenance problems and improve safety.

There are currently 72 stormwater retention basins under the City's jurisdiction. At the current level of funding and depending on the level of work required, 2 to 4 basins are rehabilitated every two years. As the basins age, they will require a higher level of maintenance, and thus future funding levels and prioritization of work will have to be reviewed in order to continue this program of asset preservation.

The expected life of this asset is 10 years.

WATER AND WASTE - GENERAL CAPITAL FUND

Project Name: **Flood Pumping Station Rehabilitation**

Department: Water and Waste
Project: 2076500109

Capital Priority Rating: 3 - 3
Service: Land Drainage and Flood Control

In a 2007 report on the adequacy and operation of the 34 regional flood pumping stations it is estimated that \$22.7 million of upgrades will be required. Near-term expenditures (i.e., next 10 years) have been estimated at \$14.5 million, and long term (next 11-50 years) are identified to cost \$8.2 million. These upgrades improve overall station reliability during high river levels and rainfall events. Funding for this project also includes an annual program for carrying out major repairs, upgrades and/or improvements to the flood pumping stations, and associated outfall pipes and gates. Upgrades and/or improvements include changes to: ventilation, electrical, mechanical, structural, and architectural components. All stations will be upgraded for remote monitoring which is critical during flood and rainfall events.

Formerly, under the 1990 "Clean and Beautiful Winnipeg" initiative, several flood pumping stations had been identified for aesthetic improvements.

The expected life of this asset is 50 years.

WATER AND WASTE - GENERAL CAPITAL FUND

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

This is a project to install flap gates and positive sliding gates within concrete gate structures on outfall sewers where these facilities do not currently exist or the existing facilities are inadequate or substandard. Under high river level (flood) conditions, the river water backs up into the land drainage and combined sewer systems. In some low lying areas there is a potential for river water to inundate roadways and adjacent properties. The presence of river water in the sewer also greatly reduces the capacity of the system to carry away rainfall and snow melt runoff. The gate structures will prevent the entry of river water into the land drainage and combined sewer systems.

Subsequent to the 1997 flood event, 70 outfall locations were identified as requiring gates. To date 34 locations have been addressed, leaving 36 locations yet to be completed.

The expected life of this asset is 50 years.

WATER AND WASTE - GENERAL CAPITAL FUND

Project Name: **Floodplain Management**

Department: Water and Waste
Project: 2070000409

This project will investigate and implement programs, policies and legislation to:

- 1) Protect and ensure permanency of current and future secondary dike installation;
- 2) Prevent construction of new structures interfering with secondary dikes and within unprotected areas subjected to frequent high river levels;
- 3) Purchase and remove existing structures from the floodplain; and
- 4) Investigate a process and develop guidelines to control or prevent improvements/re-developments at unprotected private properties with potential acquisition of such high risk properties starting in 2007.

In April 2007, Council approved a program to raise the level of flood protection for low-lying properties below 20 ft James Avenue where it could be demonstrated the cost of providing sandbags exceeded the cost of a permanent flood works. In this program, the level of flood protection would be raised to 22.5 ft James Avenue and thereby avoid the need to sandbag for most floods. If all eligible properties participate, the cost of this program could be \$880,000 and the City could avoid the sandbagging cost of approximately \$2,000,000.

The implementation of such programs could take place over a minimum of 5 to 10 years at a cost of \$10 million.

The purchase of Seine River Waterway lands is a Council adopted policy to provide long term economical regional drainage and to manage the floodplain. The floodplain lands were originally delineated in 1980 and are required to accommodate flow along the Seine River from a 100-year summer storm. They are typically purchased at the time of subdivision, made possible from funds collected through the Seine River Waterway Charge applied to all subdivision and rezoning applications within the Seine River watershed within City limits. Development of lands adjacent to the Seine River will occur faster than the development of lands further from the Seine River. Therefore, the funding required to purchase floodplain lands will exceed the funding collected from the Waterway Charge.

WATER AND WASTE - GENERAL CAPITAL FUND

The 1997 flood identified that in the south-end of the City the primary dikes were too low due to higher flows on the upstream portion of the Red River, and in the north-end of the City the dikes were too low due to backwater effects from the Floodway. In 1997 these deficiencies were addressed by constructing temporary clay dikes. The current level of proposed funding will begin to address these areas.

To provide 1 in 700 year flood protection, the level proposed with the Floodway Expansion will require a further raise of the City's primary dike system to deal with additional backwater effects from the expanded Floodway. The estimated cost to undertake this additional work is in the range of \$400 million (2009 dollars) and represents the cost for raises to the primary dikes and associated bank stability improvements. The recently released Clean Environment Commission (CEC) report on the Floodway Expansion made a "non-licensing" recommendation that the City complete permanent raising of their primary dikes by 2015 and that all levels of government work cooperatively on the financing of these improvements.

Until permanent works are completed, the City will rely on temporary raises to its primary dikes on an as-required basis.

The purpose of this program is to reconstruct or upgrade miscellaneous components of the existing land drainage system to conform with the City of Winnipeg Drainage Safety Guidelines. Specific projects have been identified and prioritized as part of the Open Channel Drainage Inventory and Safety Review Study.

The expected life of the assets is 75 years.

WATER AND WASTE - GENERAL CAPITAL FUND

Asset management principles are being utilized for various sections in the Water and Waste Department. An asset management strategy is required to define goals, objectives, and strategies for the development and maintenance of a consistent and effective asset management program involving all functions of the land drainage service. The asset management strategy will identify, prioritize, and establish the future direction of condition assessments, establish deterioration/life cycles for components, and recommend rehabilitation, maintenance, and associated financial requirements.

WATER AND WASTE - GENERAL CAPITAL FUND

Project Name: **Land Drainage Utility Study and Implementation**

During high water events, the City places temporary pumps to dewater the sewer system during rainfall/snowmelt events. These temporary pumps require continuous monitoring during a high water event.

This program will involve replacing some of the temporary pump locations that need to be placed every year with permanent submersible pumps. Costs include modifications to site, pumps and cost of providing appropriate power at site.

The expected life of the assets is 50 years.

WATER AND WASTE - GENERAL CAPITAL FUND

This program, which was approved by Council on October 21, 1987, provides for basement flood relief to combined sewer areas. Funds will be used for the planning, design, and construction of sewer relief works. Also, a portion of the funds will be used for sewer flow and meteorological monitoring in advance of design as well as public communication and education on basement flood protection.

There are 42 combined sewer districts in Winnipeg. Currently, 28 combined sewer districts have been relieved. At present, 2 combined sewer districts are being relieved, another 2 are being considered for partial separation and an additional district will be studied for future relief. Planning for the relief work is also coordinated with the upcoming Combined Sewer Overflow program and the Sewer Rehabilitation program. The cost for the remainder of the program is \$246M and at current funding rates will require over 20 years to complete. The benefit to cost ratio of the outstanding work is 3.8 to 1; meaning for every dollar spent on sewer relief works, \$3.8 dollars are saved in reduced flood damages.

The expected life of this asset is over 50 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

WATER AND WASTE - GENERAL CAPITAL FUND

The provision for development agreement payback is an allowance for the City to repay developers who bridge finance the installation of oversized land drainage services at a time when City capital funding is not provided. The policy guideline for bridge financing was defined in the previous version of the Development Agreement Parameters and was again incorporated in the most recent version of the Parameters which was adopted by Council on June 21, 1989.

Funds budgeted will provide the following paybacks:

2011 DASZ 30/05 - Bridgewood Estates Inc./Perfanick	500,000
2012 DASZ 3/93 - Genstar/Amber Trails	500,000
2013 DASZ 1/06 - MHRC/Waverley West	500,000
2015 DASZ 14/94 - Genstar/Prairie Crossing	500,000

The expected life of this asset is over 50 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

WATER AND WASTE - GENERAL CAPITAL FUND

This project includes construction of a 1,350 mm diameter land drainage sewer on Fernbank Avenue from approximately 65 metres west of Main Street to Rivergrove Drive. The sewer will provide a permanent outlet for the Riverbend Subdivision retention basin and an outlet for the undeveloped lands west of the CPR Winnipeg Beach Subdivision rail line. These lands include the Public Works Department's snow dump site north of Fernbank Avenue. The expected life of this asset is 75 years.

WATER AND WASTE - GENERAL CAPITAL FUND

Funding is for rehabilitation of sewer outfalls, repair to piping, and correction of riverbank instability. A condition assessment was completed in 1998 to provide a prioritization of repairs for outfalls throughout the City. Outfall repairs will focus on the outfalls that require most immediate attention, some of which experienced damage from the high river elevations and ice flows experienced during the 1996 and 1997 floods. Originally 55 high-priority sites were identified requiring attention. Since then, 5 more sites have been added for a total of 60 sites. To date 29 locations have been refurbished, with 31 sites remaining.

The expected life of this asset is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Saskatchewan Avenue Feedermain**

Department: Water and Waste -
Waterworks System
Project: 2004xxxxxy

Urban development of the lands within the City and west of the Perimeter Highway (PTH 101) will require an extension of the water distribution system to provide a looped supply. The funds included are to provide for a watermain between Cavalier Drive and a point 500 metres west of PTH 101 on Saskatchewan Avenue. It is expected that watermains required within the development lands to complete the loop will be oversized by developers. The expected life of this asset is over 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Water Supervisory Control and Data Acquisition (SCADA) Upgrade**

The Supervisory Control and Data Acquisition (SCADA) system controls and monitors the operation of the Drinking Water Treatment Plant and the Regional Water Supply and Distribution System. The automated control system is comprised of specialized computer hardware and software, remote communications, instrumentation, and Programmable Logic Controls (PLC). A SCADA system assessment and upgrading are required to ensure timely replacement of dated hardware and software. The SCADA system is essential for the supply, water treatment process control and distribution of drinking water.

The PLCs currently in use at the three regional pumping stations (McPhillips, MacLean, and Hurst), Tache and Deacon Booster Pumping Stations, and Shoal Lake Intake were installed in 1992 and will no longer be serviced or supported by the manufacturer as of December 31, 2011. Upgrading the water supply system's PLCs at this time will allow for the review of the control software to optimize the operation of the system.

The expected life of this asset is 10 years but will depend on the technical advancement in the process automation field.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Shoal Lake Aqueduct Intake Facility Assessment and Rehabilitation**

Department: Water and Waste - Capital Priority Rating: 5 - 4
Waterworks System

Project: 2003xxxxyy Service: Water

AUTHORIZATION	Previous Budgets	2010 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total

SURPLUS/(DEFICIT)	-	-	-

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

The Shoal Lake Aqueduct, which has been in continuous service since 1919, is the sole water supply infrastructure for the City. The Shoal Lake Intake Structure is the transition headworks to receive water from Shoal Lake and to control the water flow into the Aqueduct. The control of water flow is critical to the safe operation of the Aqueduct, as the Aqueduct was designed to operate as a non-surcharged pipe. The intake structure has a number of mechanical gate and screening components and related features that date back to the original construction. Given the necessity and critical nature of the intake structure and its associated Venturi structure to the safe operation of the Aqueduct and the City's water supply, a condition assessment is required to determine future rehabilitation and replacement requirements. The assessment will also consider alterations and/or additions to the intake structure to minimize its impact on the spring fish spawning.

The Shoal Lake Aqueduct Intake Condition Assessment project and the Shoal Lake Intake Maintenance/Communication Facility Rehabilitation project have been combined into one project called Shoal Lake Aqueduct Intake Facility Assessment and Rehabilitation. It is expected that the construction/rehabilitation work at the intake Facility will be combined with work required at the Shoal Lake Intake Maintenance/Communication Facility. The existing Shoal Lake Intake Maintenance/Communication Facility is used to store Intake equipment, track units and complete required maintenance on some of the Intake equipment. The facility also contains critical communications equipment for the Intake facility and Aqueduct. The facility requires upgrades and repairs in order to maintain its life and prevent damage to equipment. The funding for the Shoal Lake Intake Maintenance/Communication Facility Rehabilitation has been removed from its stand alone project and added to this combined project.

The expected life of this rehabilitated asset is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Shoal Lake Intake Chloramination Facility**

Department: Water and Waste - Capital Priority Rating: 5 - 4
 Waterworks System

Project: 20020005yy Service: Water

The first phase of the project will be a study to review alternate forms of treatment and/or disinfection for the Shoal Lake Aqueduct and distribution system to meet the operational, public health, and safety goals. Presently, chlorine is used at the intake for disinfection, slime control in the aqueduct and zebra mussel control. This results in high levels of disinfection by-products being formed. The water treatment plant must be constructed and operational prior to replacing the strong disinfection advantages of chlorine. The Water Treatment Project Risk Management process identified viable alternatives to gas chlorine to reduce risk. Given the consequences associated with security, transportation, and containment of gas chlorine, an alternative form of chlorination will be investigated.

The expected life of this asset is 25 years.

Many components in the water supply and distribution systems have been in service for many years and are reaching the end of their functional lives. These components are critical elements of the infrastructure and their failure would result in disruption of service and costly emergency repairs. This project will address the need to rehabilitate the water supply and distribution systems, in order to maintain the water system reliability and conformance with current building codes and health regulations. This will be an on-going project with additional funding being included in future years.

The scope of work will be varied and will be prioritized based on the urgency and cost effectiveness identified through condition assessment studies, available rehabilitation techniques, and research into innovative rehabilitation measures. Infrastructure to be assessed and rehabilitated under this project includes, but is not limited to, reservoirs, pumping stations, feeder mains, valves, electrical and mechanical systems, control systems, chemical systems, related building structures, and security.

Life expectancy will vary with each asset, however, a range of 10 to 50 years is expected.

Urban development of the lands within the City west of Waverley Street, north and south of Cadboro Road will require an extension of the existing feedermain system to provide water service and fire protection to developments in this area. The funds included are for Phase 1 and Phase 2 of the feedermain extension. Phase 1 is from the existing feedermain at Waverley Street and Bison Drive and extends into the Waverley West lands. Phase 2 will continue the Phase 1 extension west into the Waverley West lands and south down the proposed Kenaston Blvd extension. The expected life of the asset is over 50 years.

The feeder mains are specialized pipes which are unique in size, materials, construction techniques, and failure. The majority of feeder mains were installed in the 1960's and require inspection, testing, and maintenance to preserve the asset. Future funds will be identified as part of the first phase of this project.

The expected life of this asset is 50 years.

Asset management principles are being utilized for various projects in the water utility. However, development of an asset management strategy is required to define goals, objectives, and strategies for the development and maintenance of a consistent and effective asset management program involving all functions of the water utility. The asset management strategy will identify, prioritize, and establish the future direction of condition assessments, establish deterioration/life cycles for components, and recommend rehabilitation, maintenance, and associated financial requirements.

The water supply valves are critical elements used to control the distribution of water from the source through the feeder main pipes. The scope of the work will vary with site-specific conditions. This program will include installation of valves at new locations to improve service reliability and reduce environmental risk. The program will also include replacement of valves, operators, Supervisory Control and Data Acquisition (SCADA) control equipment, related pipe connections, valve chambers, structural assessments, and restoration works. This is an ongoing program with additional funding being included in future years.

Life expectancy will vary between 20 and 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

There are structural defects noted on the precast concrete panels at the Hurst Pumping Station. Noted defects include deterioration of the copings (exposing reinforcing steel), cracked panels, deterioration of ribs on the panels, and the deterioration of the caulking joints in several locations. These conditions may lead to water penetration into the building envelope. A structural review of these conditions is required to determine rehabilitation or replacement costs. The capital budget established in 2006 has been canceled and re-budgeted for 2010.

The expected life of the asset is 50 years.

There are numerous underground valve and meter pits that must be accessed under confined entry procedures, to maintain the valves and meters. Recent changes to these safe work practices require that water pressure be turned off outside those pits. In order to reduce water service disruptions to customers included in the shutdown areas, additional valves and bypasses are required outside the pits.

The expected life of these assets is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Deacon Chemical Feed Facility Upgrading**

The Deacon Chemical Feed Building contains chemical storage and injection equipment to treat the City's drinking water with fluoride and orthophosphate. Prior to upgrading the orthophosphate treatment equipment, an engineering study will be performed to review the need for orthophosphate and alternate chemicals to orthophosphate taking into the enhanced water quality from the new drinking water treatment plant. Given the corrosive nature of such chemicals, the chemical pumps, piping, and related monitoring and control equipment will require upgrading and replacement by 2011.

The expected life of this asset is 20 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

The McPhillips, Hurst, and MacLean pumping stations provide the final pumping to deliver water to the Water Utility customers. The pump stations were constructed in the early 1960's. It is anticipated that the building structures will require upgrading to ensure the uninterrupted operation of these pumping facilities. A preliminary assessment will be conducted in 2011 with future funding requirements to be identified in the report.

The expected life of these assets is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Wilkes Reservoir "B" Pit Upgrades/Rehabilitation**

The Wilkes Reservoir "B" Pit, constructed in the early 1960's, is one of two critical inlet control structures for controlling the flow of water into the Wilkes Reservoir. The "B" pit improvement works will address the employee safety requirements, egress requirements, valve replacement, structural/foundation repairs, electrical upgrades, and improve the site/groundwater drainage.

The project name has changed from Safety Upgrades - Wilkes Reservoir "B" Pit to Wilkes Reservoir "B" Pit Upgrades/Rehabilitation to align with the scope of work required.

The expected life of this asset is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

A comprehensive condition assessment of the Branch I Aqueduct reach of the Shoal Lake Aqueduct (Deacon Reservoir to the McPhillips Pumping Station and Reservoir) was undertaken for its entire length from 1994 to 1996. A program to assess the stability of the riverbanks adjacent to the Branch I Aqueduct where it crosses the Seine River commenced in early 1997. Downslope movement of the east riverbank has been recorded since that time and internal structural inspections of the Aqueduct has not revealed any distress of the pipe as yet. The recent trend of accelerated riverbank movement continues and the Aqueduct will inevitably be impacted along the east riverbank. Funding is for engineering and construction of riverbank stabilization works to be undertaken before the Aqueduct is impacted.

The expected life of this asset is 50 years.

The electrical power supply is the primary source of energy to drive the pumps in the drinking water pump stations. Electrical power disruptions have caused the electric pumps to shut down, for protection purposes, which results in reduced water service. A Water Pumping Station Power Reliability Study is currently ongoing and will review and prioritize electrical and control improvements to reduce the effects of electrical power disruptions. A final assessment report was completed and identified a number of required improvements which will be completed in phases according to priority.

The expected life of this asset is 20 years.

The waterworks system is made up of complex infrastructure that delivers water from Shoal Lake to Winnipeg homes and businesses. Operating the waterworks system is subject to legislation including the Drinking Water Safety Act, Public Health Act, Operator Certification Regulations, Workplace Safety and Health Act, and Environment Act. Safeguarding our infrastructure from accidental or intentional damage or destruction is critical to drinking water quality and public health. Funding is required for increased security measures to adequately protect the waterworks system.

A drinking water system Infrastructure Assessment study is required under the Provincial Drinking Water Safety Act. The objective of the report is to carry out an onsite evaluation to identify, analyze, and mitigate any potential adverse health risks and environmental impacts associated with the water system in a "source to tap" methodology. This work will also determine whether the water system's source, facilities, equipment, and operations are effective in producing safe drinking water, and meet the regulations in force.

The scope will also review projected water demands, treatment, and pumping capacities and any anticipated changes to water quality standards. The first assessment report must be completed by an independent professional engineer and submitted in 2010.

Infrastructure assessment reports are required on a 5 year reporting frequency.

Phase two of the Customer Information and Services System (CISS) project will include implementing enhanced functionality of the Oracle Customer Care and Billing (CCB) system. Some components of this phase will include web self-service, CCB cashing, meter management and inventory control, enhanced reporting, and work order management interface.

The first phase of the CISS project included \$10,000,000 (split between the Waterworks System Fund and the Sewage Disposal System Fund) for replacing the legacy mainframe based system with a new web based Customer Care and Billing (CCB) system. In order to mitigate risk and ensure a successful project, only the base Oracle functionality was implemented in Phase one.

The funding for this project is split 50/50 between the Waterworks System Fund and the Sewage Disposal System Fund.

** Supported by class 3 estimate, see Appendix # 2.

Council has mandated that the Water & Waste Department develop a cost of service rate plan. Cost of Service Analysis is a methodology for rate setting that is generally accepted in the industry and recommended by industry associations such as the American Waterworks Association (AWWA), Water Environment Federation and the U.S. Environmental Protection Agency. It is also accepted by Public Utility Boards and Commissions. Implementation of a cost of service rates philosophy will align rates with the actual cost of delivering the service, by class of customer. The objective being that each group pays its "proportionate share" of the costs. This will require a detailed review and possible restructuring of how Water and Sewer rates are applied by customer class.

The funding for the project will be split 50/50 between the Waterworks System Fund and the Sewage Disposal System Fund.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Safety Upgrades - Regional Reservoir Access**

Department: Water and Waste -
Waterworks System
Project: 20010014yy

This project is directly related to the safe entry into the McPhillips, Wilkes and MacLean reservoirs. Structural modifications are required for the installation of access/ladders to comply with current safety regulations. The capital budget established in 2006 has been canceled and re-budgeted for 2010.

The expected life of the asset is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Synergen/GIS Interface**

Department: Water and Waste - Capital Priority Rating: 3 - 2
 Waterworks System

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

The Synergen/GIS (Geographic Information System) Interface links the Water and Waste Department "in ground" assets data (Water and Sewer pipes, valves, gates, etc.) to the department's Computerized Work Management system. This will provide the automatic recording of work and costs against all in ground assets; provides up to date information on the operational status of all assets (valve closures); automatically records repair status of assets so that future condition assessment and asset renewal decisions can be made with greater accuracy.

The benefits include improved customer service and reduced operating risk because of the real time information on water valve and sewer gate status; increased staff efficiency in recording work against assets, improved decision making in knowing asset status and condition which will provide for lower costs in asset management and renewal.

The Capital Budgets previously established for the Computerized Work Management System (CMWS) have been closed and CWMS work will continue as Synergen/GIS Interface for 2010.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **552 Plinguet - Water Services Building Roof Rehabilitation**

Department: Water and Waste - Capital Priority Rating: 3 - 3

Waterworks System

Project: 20010010yy Service: Water

AUTHORIZATION	Previous Budgets	2010 Adopted **	FORECAST					Five-Year Forecast Total	Six-Year Total

The Water Services building at 552 Plinguet requires re-roofing of the Water Section garage because the existing roofing has exceeded its functional life and is in need of frequent repair and servicing. Computer and training related equipment are housed in the Water Section Garage as it is used also as a training facility. The capital budget previously established in 2006 for Water Services Building Upgrades / Repairs at 552 Plinguet has been cancelled and re-budgeted as 552 Plinguet - Water Services Building Roof Rehabilitation for 2010.

The expected life of this asset is 20 years.

** Supported by class 3 estimate, see Appendix # 2.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Aqueduct Bridging Structure at Deacon**

Department: Water and Waste - Capital Priority Rating: 3 - 2

Project: 2003xxxxxy

Service: Water

AUTHORIZATION	Previous Budgets	2010 Adopted **	FORECAST					Five-Year Forecast Total	Six-Year Total
			2011 **	2012	2013	2014	2015

The Greater Winnipeg Water District (GWWD) rail line crosses the Shoal Lake Aqueduct at the Deacon Reservoir site. A buried timber bridging structure was constructed, as part of the original construction work, to protect the aqueduct from the rail traffic loading. An engineering assessment of the bridging structure and aqueduct have been performed and recommended that the bridging structure be replaced as the current structure has failed and no longer offers the required protection to the aqueduct.

The expected life of this asset is 50 years.

** Supported by class 3 estimate, see Appendix # 2.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Civil Maintenance Shop and Storage Building at Deacon**

Department: Water and Waste -
Waterworks System

New water and wastewater facilities recently constructed, under construction and/or to be constructed require maintenance. This results in increased requirements for maintenance shop and storage. In order to support the increased maintenance requirements at the new water treatment plant, a maintenance facility is proposed. Existing staff and equipment that currently support other water supply facilities will also move to this location to take advantage of shared resources. This will also create additional capacity at the current location, which will be used by additional Civil maintenance needs required for new wastewater facilities.

The expected life of this asset is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

The Deacon Reservoir is made of four large uncovered cells constructed from clay material. The reservoir has the capacity to supply the City of Winnipeg with water for 28 days when the aqueduct is taken out of service for inspection and repairs. The clay embankments rise approximately 5 meters above the natural elevation. A number of localized failures have developed on the embankments from moisture accumulation, freezing and thawing. Repairs will include the excavation, recompaction of the clay and regrading of the embankment crown with suitable material.

There are two box culvert pipes that cross under PTH 207 which convey water from Cell 2 into Cell 1. The box culverts' joints have a history of leaking and a number of joint repair methods have been undertaken with minimal success. The joint leakage is a safety issue as the water will flood the ditches and roadway during the winter conditions. Both box culvert pipes will be repaired by installing a structural liner.

The expected life of this asset is 50 years.

** Supported by class 3 estimate, see Appendix # 2.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Deacon Booster Pumping Station Suction Header Divider Valve**

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

The Deacon Booster Pumping Station suction header pipe has been identified as a single point of potential failure for the supply of treated water to the City. The work will include the installation of a valve in the mid point on the suction header to effectively divide the suction header. This will permit a continuous supply of water to the City in the event a leak occurs on this suction header.

The expected life of this asset is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

As part of a risk management assessment, the Deacon Booster Pumping Station foundation drainage system was identified as high risk due to internal flooding from excessive foundation water. The pump floor is approximately 9 meters below grade. With the construction of the new water treatment plant, the Deacon Booster Pumping Station must be operated continuously to deliver drinking water to the City of Winnipeg. The foundation drainage improvement and potential automation of valves to control the flow of water will reduce the risk of flooding the electrical pumps.

The expected life of this asset is over 50 years.

** Supported by class 3 estimate, see Appendix # 2.

The Water Works By-law No. 504/73 relates to the Water Works Utility, the fixing of water rates and the billing and collection thereof. This by-law was originally passed by Council November 7, 1973. Each year amendments are passed to reflect the new water and sewer rates. The structure and language in the by-law has become dated. Amendments have occurred to clarify terms, liability or cross connection control provisions based on the original by-law structure. The Water Works By-law will be written taking into account a review of the by-laws in other jurisdictions, plain language format and better alignment with current operation policies.

The expected life of this asset is 25 years.

** Supported by class 3 estimate, see Appendix # 2.

WATER AND WASTE - WATERWORKS SYSTEM FUND

The Tache Booster Pumping Station on the Branch 1 Aqueduct was constructed in 1950 in order to develop the full capacity of the aqueduct. A study identified a number of required upgrading to the pumping station and the aqueduct surge tower adjacent to the station. The work includes replacing the pump motors, upgrading the station electrical, heating and ventilation systems, upgrading the foundation and roof structures, and a reconfiguration of the valving and piping between the pumping station and the surge tower. Also, aesthetic, fencing and landscaping upgrades to the site and facilities will be undertaken to coincide and assimilate with the proposed residential redevelopment of the surround area.

The capital budget established in 2006 has been cancelled and re-budgeted for 2013.

The expected life of this rehabilitation asset is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Water Treatment Research and Process Optimization Facility**

Department: Water and Waste -
Waterworks System

The water treatment research and process optimization facility will be constructed to facilitate ongoing water treatment research and optimization of the existing water treatment process. This will be a small scale model replicating the water treatment process.

As new chemicals become available or existing chemicals become unavailable or existing chemical prices rise such that they become cost prohibitive; alternative chemicals can be pilot tested in this facility to ensure the water quality will meet the regulatory licence requirements. In the future as drinking water quality regulations become more stringent new water treatment processes can be studied and validated on the water supply prior to committing to a large capital expansion to the water treatment plant. Other benefits are: filter media and absorption evaluations, operator training and education, and testing of emerging treatment technologies that become cost effective. The water treatment plant has space dedicated for this facility.

The expected life of this asset is 25 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

The Branch I, II and Interconnection aqueducts are specialized pipes which are unique in size, materials, construction techniques and failure.

The Branch I aqueduct was installed in 1918 and has an established inspection and maintenance program, however, the Branch II and interconnection aqueducts were installed in the 1960's and will require specialized inspection, testing, and maintenance to preserve the asset.

The Branch II and Interconnection aqueducts were installed between 1959 and 1963 and require inspection, testing and maintenance to preserve the asset.

The expected life of this asset is 50 years.

This project is a continuing program to replace and/or rehabilitate deteriorating watermain infrastructure. Funding is used for watermain replacement, cathodic protection, valve and hydrant replacement/rehabilitation, correction of dead end mains, upgrading of substandard mains, watermain studies, assessments, and hydraulic improvements for fire protection purposes. Additional funding has been added to the program due to the escalation in construction costs and an increase in the number of watermains requiring replacement/rehabilitation. The expected remaining life of each rehabilitated watermain ranges from 20 to 80 years, depending on the rehabilitation technology and the asset condition.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

WATER AND WASTE - WATERWORKS SYSTEM FUND

The Shoal Lake Aqueduct, which has been in continuous service since 1919, delivers water to Winnipeg from Shoal Lake, a distance of 156 kilometres (97 miles). A comprehensive condition and rehabilitation of the Aqueduct commenced in 1988 and was substantially completed in 2004. While the Aqueduct rehabilitation project has resulted in an increase of the Aqueduct's service life by 50 years, ongoing monitoring and inspection programs will identify future works.

Works which have been identified include the rehabilitation of drainage siphons crossing the Aqueduct, replacement of corroded boathouse access doors and broken Aqueduct vent pipes, re-establishment of a boathouse in proximity of the Whitemouth River and condition inspection and cleaning of the Aqueduct underdrain.

During the rehabilitation of the Aqueduct, an inventory of specialized and costly inspection and maintenance equipment was assembled which will continue to be utilized in the ongoing inspection and maintenance of the Aqueduct. This equipment requires a dedicated and secure storage facility to ensure its functionality and availability.

The expected life of this asset is 50 years.

This project is part of a continuing program for mitigating hydraulic, structural, safety, odour, aesthetic problems, and capacity assessments as required for the 95 lift stations and associated forcemains, gate chambers, and related works in the sewage collection system. For maximum effectiveness the program must be on a planned and continuous basis.

The program will include a condition assessment of all lift stations to establish future funding requirements.

The expected life of this asset is 50 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

This project involves locating and identifying sources of extraneous inflow and infiltration (I&I) entering the wastewater sewer system, and implementing mitigative measures to reduce the I&I such that wet weather flows to wastewater treatment plants are minimized, basement flood protection is improved during high river levels and emergency discharges are minimized. Extraneous inflows from groundwater, snowmelt, and rainfall events place an additional stress on the wastewater treatment plants that can result in reduced life expectancy of equipment and/or accelerate the need for wastewater treatment plant expansion. Minimizing extraneous inflows will reduce these additional stresses, prolong equipment life, and postpone facility expansion. Areas of the City will also be identified where land drainage sewer system cross-connections may exist with the wastewater sewer system that can be significant sources of I&I under high river levels or wet weather.

In addition to this, as of 1990, new homes are required to have sump pumps and pits to collect foundation drainage and then discharge this clean water onto the home owners land. The intent was to remove this large source of extraneous flow from reaching the wastewater treatment plants. It has been found, however, that some home owners have illegally connected sump pumps to their wastewater sewer service. Areas where large sources of extraneous I&I are suspected will be investigated. Appropriate technical measures including public education and communication will be initiated to rectify this situation.

The expected life of this asset is 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Sewer System Isolation in Areas Protected by Secondary Dikes**

Department: Water and Waste -

Capital Priority Rating: 3 - 3

This project involves isolating the sewer system in areas protected by secondary dikes from the remainder of the sewer system behind the primary dikes. This will involve one of three types of work for different locations:

1. Installation of gate valves on the house sewer connection;
2. Installation of sump pits and pumps and backwater valves in each property; or,
3. Installation of parallel sewer mains in streets.

The purpose of installing these works is to prevent complete flooding of a sewer district behind a primary dike should a secondary dike breach occur and flood the properties between the secondary and primary dikes.

The expected life of this asset is 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Raw Sewage Pump Replacement - North End Water Pollution Control Centre (NEWPCC)**

Department: Water and Waste - Capital Priority Rating: 5 - 3

Project: 2031xxxxyy Service: Wastewater

AUTHORIZATION	Previous Budgets	2010 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

Raw sewage pumping is a critical operation at the NEWPCC. The largest and oldest raw sewage pumps at the NEWPCC (pumps MP2, MP3, MP4 and MP6) were installed in 1965 and are each rated at 700 horsepower with a pumping capacity of 188 megalitres per day (ML/d). While these pumps have been maintained in good condition, repairs are becoming more difficult to complete. Parts are difficult to obtain and may have to be custom fabricated. The variable speed drives on pumps MP2 and MP4 are considered obsolete. Variable speed drives allow for more efficient pumping to pace the flows received at the NEWPCC.

Funding shown will be for: conceptual design pertaining to replacement of all six raw sewage pumps; functional and detailed design, contract administration, and addition services pertaining to immediate replacement of pumps MP2, MP4 and MP5; and a supply and installation contract for three variable speed pump/motor/drive assemblies and associated equipment and services. The scope and cost for these upgrades will be developed as engineering proceeds through conceptual and functional design phases.

The expected life of this asset is 25 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Upgrading External Power Supply - North End Water Pollution Control Centre (NEWPCC)**

Department: Water and Waste -
Sewage Disposal

Note: *Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges*

The NEWPCC currently has two separate power supplies which are both capable of supplying the entire NEWPCC power requirement. In the event of a power failure to one supply, the plant will continue to operate on the other supply.

If any additional treatment processes are added to the plant, this redundant power supply will be compromised. Effluent disinfection was added to the NEWPCC in 2006 and has been accommodated by its own separate power supply.

Future biological nutrient reduction processes will have higher power requirements and will increase the plant power requirement beyond the current capacity of either of the two supplies. In anticipation of nutrient removal at the NEWPCC the existing power supplies must be assessed and upgraded.

The life expectancy of this asset is 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Hauled Liquid Waste Acceptance Facility - Wastewater Pollution Control Centres**

Department: Water and Waste - Capital Priority Rating: 5 - 3

Project: 2033xxxxxy Service: Wastewater

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

The West End Water Pollution Control Centre (WEWPCC) accepted waste from septic haulers as a disposal facility at the Perimeter Road Pumping Station. The design consultants for the WEWPCC Biological Nutrient Removal facility have recommended that this practice be stopped. On December 1, 2005, the Standing Policy Committee on Infrastructure Renewal and Public Works concurred with the recommendation. As of July 1, 2007, septage was no longer accepted at the WEWPCC and the septage receiving facility at the WEWPCC was closed. This project is to provide increased capacity at the other two facilities (North and South End Water Pollution Control Centres).

The name of this project has been revised from Septage Acceptance Facility - Wastewater Pollution Control Centres to Hauled Liquid Waste Acceptance Facility - Wastewater Pollution Control Centres. The funding in 2008 and 2009 will be used to design and construct upgraded hauled liquid waste acceptance facilities at the North End Water Pollution Control Centres and include provisions for landfill leachate acceptance at the NEWPCC. Due to timing of design, tendering, construction and increased budget costs, the South End Water Pollution Control Centre hauled Liquid Waste Facility was to be designed in 2009 with tendering and construction in 2010.

To improve truck entry and exit security within the NEWPCC it is proposed to add an additional receiving/handling facility to the NEWPCC Hauled Liquid Waste Acceptance Facility in 2011 that will receive sludge from SEWPCC and WEWPCC. This facility will then maintain all truck traffic outside the secure fenced perimeter of the NEWPCC.

The expected life of the structures is 50 years, the expected life of electrical and mechanical components is 25 years, and the expected life for computer related systems is 10 years.

** Supported by class 3 estimate, see Appendix # 2.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Various Water Pollution Control Centre buildings require re-roofing because their existing roofing has exceeded their functional life and are in need of frequent repair and servicing. Mechanical equipment and controls contained in these facilities require that the superstructures be adequately maintained to protect its components. Re-roofing in a timely and proactive manner will maximize the functional life of the facilities, protect the mechanical and control components contained in the facilities, and prevent structural damage to the facilities as a result of water leakage undergoing freeze-thaw cycles. The funding for this ongoing program includes engineering, design, and re-roofing construction.

The expected life of this asset is 30 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

The centrifuge units de-water digested sludge produced as a by-product of wastewater treatment processes. Furthermore, the sludge produced at the South End and the West End Water Pollution Control Centres is processed at NEWPCC. There are 6 units that are subject to intense mechanical wear, are 18 years old, and are failing with increasing frequency. For construction, operation, and maintenance reasons, these units must be identical to each other, and as such must be purchased simultaneously, or phased over 2 years maximum.

The life expectancy of this asset is 15 years.

This project is for the rehabilitation and/or replacement of forcemain river crossings and for the installation of leak detection equipment on the existing waterway crossings.

The Department has completed a risk assessment of all river crossings in order to determine a prioritization plan to upgrade and replace any at risk river crossings as required by Environmental Licences issued by the Province of Manitoba for the wastewater collection system in the City of Winnipeg.

These funds will also be used to install continuous leak detection monitoring equipment at all river crossings as required by the Provincial Environmental License. The Department is currently undertaking a pilot program to evaluate and determine methods to meet this requirement.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

Process equipment in the digester area is over 40 years old and some components are failing with increasing frequency and have reached their useful life. Six digester gas compressor units are used to recirculate biogas in the sludge treatment process. The six sludge heat exchanger units are used to maintain the sludge temperature in the digesters and are critical components in the sludge treatment process. The compressors and the heat exchangers are identical and for construction, operation, and maintenance purposes, their replacements must be acquired simultaneously to ensure that the new equipment is identical.

The life expectancy of this asset is 20 years.

Currently all HVAC (Heating, Ventilating, and Air Conditioning) equipment at the WEWPCC is approximately 16 years old, which, based on information provided by the equipment suppliers, is the normal life expectancy of the majority of HVAC equipment at the WEWPCC. Most of this equipment operates continuously and in a severe duty application due to the off-gases resulting from the treatment processes.

In 2006 a mechanical condition and air balancing assessment was performed at the WEWPCC. It was determined that most of the HVAC equipment requires replacement and/or maintenance, and that there are several air balance issues that need to be corrected to maintain proper pressure relationships between classified and unclassified areas. It was also noted that some existing equipment is operating at near maximum capacity and will need to be re-sized.

The expected life of this asset is 20 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Traffic Safety Upgrades - North End Water Pollution Control Centre (NEWPCC)**

The 1990 dewatering expansion at NEWPCC considered the need for traffic lights on Main street at the exit due to the increase in large (WB-20, 30 KL, 6 - axle) truck traffic and the safety concerns associated therewith, but this did not proceed at that time. Since then, large truck traffic at NEWPCC has increased over time from 20 - 25 large trucks/day to upwards of 100-150, with considerable increases in large leachate and liquid sludge trucks, construction trucks, as well as septage trucks and delivery/staff and contractor vehicles associated with plant expansions which are currently underway (in addition to the 100 large trucks/day). Meanwhile, the Chief Peguis bridge and surrounding developments have resulted in large increases in vehicular traffic on Main Street.

Over time, construction traffic will be replaced and exceeded by more septage trucks due to the closing of a West End receiving facility, by chemical delivery trucks due to treatment processes under construction, and by sludge trucks due to expansions at the City's other plants now underway. A traffic expert consultant assignment is urgently required to assess and develop alternatives and consult with authorities and obtain any needed approvals, followed by construction works (traffic lights, ramps, roadways, R/R crossings, access, etc.) to alleviate traffic safety issues both with on-site traffic and ingress/egress at Main Street.

The expected life of this asset is over 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Holding Tanks Coating - North End Water Pollution Control Centre (NEWPCC)**

The four original digesters at the NEWPCC, built in the mid 1930's, are now used as digested sludge holding tanks, and are essential to the operation of the digested sludge dewatering facility, which serves all three of the City's wastewater treatment plants. The 75+ year old interior concrete walls are subject to corrosive gases and the interior wall and ceiling have deteriorated to the point where reinforcing steel is exposed in some areas. Assessment by qualified experts followed by rehabilitation and application of a sealant and/or coating is required to assure continued functionality of these tanks and avoid the expense of complete rebuilding.

The expected life of this asset is over 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Primary Clarifier Covers - North End Water Pollution Control Centre (NEWPCC)**

The three uncovered primary clarifiers at the NEWPCC have been identified as one of the remaining untreated odour sources at the site. The original Primary Clarifier Cover project, first introduced into the 1992 Capital Budget Estimates forecast was set up to implement a cover/ventilation system which would facilitate year round maintenance and operational flexibility and provide odour control capability. The project scope of work and the budget were expanded to include replacement of the clarifier sweep mechanisms which have reached the end of their expected design/service life.

Due to several factors that amounted to a significant increase in the capital funding required to complete the project, the Department recommended a deferral of the clarifier covering portion of the project.

On July 18, 2007, Council approved and adopted the following:

"That the scope of work for this project be amended to include only the replacement of the sweep mechanisms and their associated mechanical and electrical equipment and that the cover portion of the project not be delayed, with Administration reporting back to the Standing Policy Committee on Infrastructure Renewal and Public Works on the clarifier cover system expenditure."

The work required on the NEWPCC Clarifiers is now separated into two individual Projects: "Primary Clarifier Refurbishment" for the sweep mechanisms and their associated mechanical and electrical equipment and "Primary Clarifier Covers" for the facilitation of year round maintenance and odour control capability. The budget originally established for work required for the Clarifier Covers was developed in 2003. Recent construction cost increases averaging 15% per year, a better understanding of the required work and changes to the National Building Code have resulted in a new estimated cost of \$25,500,000.

The expected life of this asset is over 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Asset management principles are being utilized for various projects in the wastewater utility. Development of an asset management strategy is required to define goals, objectives and strategies for the development and maintenance of a consistent and effective asset management program involving all functions of the wastewater utility. The asset management strategy will identify, prioritize and establish the future direction of condition assessments, establish deterioration / life cycles for components, and recommend rehabilitation, maintenance, and associated financial requirements.

The Capital Budget previously established in 2004 has been cancelled and re-budgeted for 2011.

The expected life of this asset is over 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Phase two of the Customer Information and Services System (CISS) project will include implementing enhanced functionality of the Oracle Customer Care and Billing (CCB) system. Some components of this phase will include web self-service, CCB cashing, meter management and inventory control, enhanced reporting, and work order management interface.

The first phase of the CISS project included \$10,000,000 (split between the Waterworks System Fund and the Sewage Disposal System Fund) for replacing the legacy mainframe based system with a new web based Customer Care and Billing (CCB) system. In order to mitigate risk and ensure a successful project, only the base Oracle functionality was implemented in Phase one.

The funding for this project is split 50/50 between the Waterworks System Fund and the Sewage Disposal System Fund.

** Supported by class 3 estimate, see Appendix # 2.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Council has mandated that the Water & Waste Department develop a cost of service rate plan. Cost of Service Analysis is a methodology for rate setting that is generally accepted in the industry and recommended by industry associations such as the American Waterworks Association (AWWA), Water Environment Federation and the U.S. Environmental Protection Agency. It is also accepted by Public Utility Boards and Commissions. Implementation of a cost of service rates philosophy will align rates with the actual cost of delivering the service, by class of customer. The objective being that each group pays its "proportionate share" of the costs. This will require a detailed review and possible restructuring of how Water and Sewer rates are applied by customer class.

The funding for the project will be split 50/50 between the Waterworks System Fund and the Sewage Disposal System Fund.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The discharge chamber and related appurtenances were part of a major plant expansion in 1963. Due to age, wear, and the corrosive environment, extensive deterioration of this asset is evident. Funding in 2009 will be for an engineering assessment of the condition and capacity of the discharge chamber and the conduit from the discharge chamber to the grit building. Funding in 2013 and 2014 will be for the design and construction of a second discharge chamber and will be dependent on the outcome of the condition assessment.

The expected life of the structure is 50 years and the expected life of the mechanical and electrical components is 25 years.

The Geographic Information System GIS/Synergen Interface links the Water and Waste Department "in ground" assets data (Water and Sewer pipes, valves, gates, etc.) to the department's Computerized Work Management system. This will provide the automatic recording of work and costs against all in ground assets; provides up-to-date information on the operational status of all assets (valve closures); automatically records repair status of assets so that future condition assessment and asset renewal decisions can be made with greater accuracy.

The benefits include improved customer service and reduced operating risk because of the real time information on water valve and sewer gate status; increased staff efficiency in recording work against assets, improved decision making in knowing asset status and condition which will provide for lower costs in asset management and renewal.

The capital budget previously established for the Computerized Work Management System have been cancelled and re-budgeted as Synergen/GIS Interface for 2010.

Early indications from the NEWPCC raw sewage pump replacement project suggest that the new pumps will exceed the existing crane lifting capacity. Installation of new pumps are scheduled to begin October 2011. The overhead crane replacement must be completed before this time.

Funds are required for engineering services for structural assessment to determine requirements for replacing existing 7.5 ton crane, with a new 10 ton crane capacity.

The estimate includes \$100,000 for engineering services and up to \$300,000 for demolition of existing crane and supply and installation of new crane. A 10 ton crane may require significant alteration to the building structure and electrical/mechanical systems. The scope and budget will be revised as engineering proceeds.

The expected life of this asset is 25 years.

The Perimeter Road Pump Station (PRPS) is the raw wastewater pumping facility for the WEWPCC. It is located approximately 1.2 km east of the WEWPCC. The PRPS is approximately 45 years old and has recently undergone a reliability upgrade of its forcemain, mechanical, structural and electrical components.

The PRPS is configured to accommodate four pumps. At the present time only three pumps are installed; one medium sized electric variable capacity pump to handle average dry weather flows as well as night time low flows, one large electric pump to handle wet weather flows and one large diesel pump for emergency pumping. A second medium sized electric variable capacity pump is required to provide redundancy and continuous pumping for the average and night time low flows. The new Biological Nutrient Removal (BNR) treatment process at the WEWPCC may be susceptible to process upsets if the only variable capacity pump is out of service.

The existing combined sewer lift stations, Jessie and Cockburn, are at their operating capacity. The proposed Bus Rapid Transit (BRT) and Fort Rouge Yards (FRY) Development will result in additional dry and wet weather flows to these stations. To safely convey all dry weather flows to the wastewater treatment plants without risk of dry weather overflows, and maintaining sufficient wet weather flow capacity to protect against basement flooding, both stations will require significant structural, mechanical and electrical upgrades.

The expected life of the structure is 50 years, and 25 years for the electrical and mechanical components.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The WEWPCC treatment process was recently upgraded to provide the nutrient removal capability required by licence. During the design of this upgrade it was decided to re-use the existing blowers as they appeared to have adequate capacity for the new process. After several months of operation it is now apparent that although these blowers do have enough capacity, they do not have any turn down ability. When the existing blowers are required to turn on and off during the night to match the low night time flows there has been some damages observed in the air distribution and diffusion system. The installation of variable speed drives will provide energy efficiencies as well as the ability to match the air requirements to plant flows.

** Supported by class 3 estimate, see Appendix # 2.

Upon completion of the 2003 regulatory hearings of the Clean Environment Commission (CEC), it has been recommended and the Province has adopted that a further regulatory review be undertaken in two (2) years and then every three (3) years thereafter.

Ongoing works to satisfy regulatory requirements will require documentation, monitoring, and support to demonstrate that the construction and operation of the completed projects relating to the CEC recommendations and as required as a condition of tripartite funding are meeting compliance terms and conditions.

Budgeted funds are for environmental assessment related studies/reports, public participation, regulatory liaison site specific assessments, monitoring and analysis, and future representation at hearings expected in the 2010 to 2015 horizon.

It is the intent to create a multi-year combined sewer mitigation program that integrates with other major sewer programs, including:

- Basement flooding relief
- Sewer Condition Assessment and Condition Upgrading
- Pollution Control Centre Upgrading Programs

A Combined Sewer Overflow Master Implementation Plan will develop specific strategies for implementation that meet regulatory compliance. The plan will consider: 2003 CEC Hearings recommendations; Manitoba Conservation Guidance and Priorities; Canadian Council of Ministers on the Environment (CCME) Municipal Effluent Strategy Guidelines; consistency with prevailing international practice; understanding of benefits and costs; fiscal responsibility and environmental stewardship; initiation of near-term actions to reduce CSO's; and confirmation of long-range control program.

The Clean Environment Commission (CEC) has recommended that the City reduce the number of overflows to the local rivers within a 20 to 25 year timeframe.

Funds budgeted are for the development of a CSO Master Implementation plan, technical and economic analyses, program development, staging of mitigation works, annual monitoring programs, pilot studies, land acquisition, integration with other major sewer programs, overflow monitoring and reporting, and initiation and implementation of control measures, including SCADA (Supervisory Control and Data Acquisition).

As more CSO's are diverted to the wastewater treatment plants, additional treatment will need to be added to process the wet weather flows to meet effluent limits set in Environment Act Licences issued for each plant.

The expected life of the sewers is 50 years, mechanical components is 25 years and SCADA system is 10 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The City of Winnipeg is reviewing its current land application practices of Biosolids relative to regulation requirements, emerging requirements associated with nutrient management regulations, changes to quantity and quality from upgraded wastewater treatment plants, and risk and criticality assessments done at all three plants. The City will have to implement alternate sludge management and disposal methods as result of the Provincial Nutrient Management Regulation. The current WINGRO management program will need to be modified to be sustainable and will require significant capital investment and transition time to implement the required changes. Funds included are for engineering study and design and construction of alternatives to current sludge management and disposal methods.

The expected life of the facility is 50 years and the expected life of the mechanical components is 25 years.

This project includes the Amalgamation of the High River Level (Flood) Protection - SEWPCC, Capacity Study/Preliminary Engineering - SEWPCC and Nutrient Removal - SEWPCC projects into one overall comprehensive program for the expansion and upgrading of the SEWPCC.

Upon completion of the 2003 Regulatory Hearings of the Clean Environment Commission regarding license review of the wastewater treatment plants, it was learned that nutrient control and ammonia toxicity reduction for all three Pollution Control Centres is a high priority for the Province of Manitoba. The main concern relates to the excess nutrients (nitrogen (N) and phosphorus (P)) introduced to Lake Winnipeg, the associated blooms of algae, and the chronic toxicity of ammonia to aquatic life under low flow conditions.

The population serviced by SEWPCC is growing rapidly and will necessitate a major expansion of the SEWPCC plant within 5 years to maintain the current level of secondary treatment and effluent quality. Upgrade requirements for conventional plant expansion in response to increased population, ammonia toxicity, and nutrient reduction at the wastewater treatment plants must be considered jointly for process design reasons and costs. The most cost effective method to address both issues is to construct Biological Nutrient Removal (BNR) facility for N and P and to meet projected flows from increased population growth. The implementation of BNR will require a major plant upgrade and expansion. Best practicable performance of BNR is anticipated to achieve a final effluent with total P and N concentrations of about 1 mg/L and 15 mg/L, respectively. The Clean Environment Commission has recently confirmed the need to use the BNR process to achieve these P and N concentrations.

Completion of the plant expansion by December 2012 is required by the Environment Act License.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Nutrient Removal/Expansion SEWPCC (continued):

The current funding requirement is based on a conceptual engineering estimate and are subject to a high degree of uncertainty. These funding requirements will be updated as engineering progresses.

The City of Winnipeg is currently investigating alternative project delivery methodologies for several major sewage treatment plant infrastructure upgrades, including the Nutrient Removal/Expansion project for the SEWPCC. As such, the Capital Budget needs and cash flow may need to be altered in the future, depending on the project delivery framework selected.

The expected life of the structures is 50 years, the expected life of electrical and mechanical components is 25 years, and the expected life for computer related systems is 10 years.

** Supported by class 3 estimate, see Appendix # 2.

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

Upon completion of the 2003 Regulatory Hearings of the Clean Environment Commission regarding license review of the wastewater treatment plants, it was learned that nutrient control for all three Pollution Control Centres is a high priority for the Province of Manitoba. The main concerns relate to excess nutrients (nitrogen (N) and phosphorus (P)) introduced to Lake Winnipeg contributing to undesirable blooms of blue-green algae.

The upgrade requirements for ammonia and/or nutrient reduction at the wastewater treatment plants must be considered jointly. The most cost effective method to address both issues is Biological Nutrient Removal (BNR) of N and P. The implementation of BNR will require a major plant expansion and double the size of the current facility. Best practicable performance of BNR is anticipated to achieve a final effluent with total P and N concentrations of about 1 mg/L and 15 mg/L, respectively. Due to the timing and magnitude of the costs, a portion of the project will need to be debt financed if it is to be implemented within the next ten years.

The impact of changes in sludge quantity and quality resulting from BNR process upgrades will have a large impact on solids handling and land applications. The addition of wet weather treatment processes associated with combined sewer overflow (CSO) control must be considered in the overall BNR process design and operation effluent disinfection for wet weather.

The required funding is based on meeting expected effluent limits on a rolling 30 day average basis. These limits are contained in an Environment Act License issued for this facility. Funding is being requested to allow for completion of the plant expansion by December 2014. Additional funds may be required and will be identified in succeeding years capital budgets.

The current funding requirement is based on very preliminary engineering and are subject to a great deal of uncertainty. These funding requirements will be updated as engineering progresses.

The expected life of the structures is 50 years, the expected life of electrical and mechanical components is 25 years, and the expected life for computer related systems is 10 years.

This project is a continuing program to replace and/or rehabilitate sewer infrastructure. Funds will be utilized to rehabilitate or replace combined, separate wastewater and land drainage sewers. Sewers will be replaced or rehabilitated using appropriate technologies, based on condition assessment determined through video inspection. A portion of the funding will be used for condition assessment. Additional funding has been added to the program due to the increased number of sewer mains requiring replacement/rehabilitation. The expected remaining life of each rehabilitated sewer ranges from 20 to 100 years, depending on the rehabilitation technology and the asset condition.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

WATER AND WASTE - SOLID WASTE DISPOSAL FUND

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

In compliance with the closure/post closure plan for the former Summit Road landfill site, there is a requirement to apply additional final cover over the site and to carry out final grading, drainage control, and vegetative cover. The additional cover and grading/drainage control, and vegetative cover will restrict infiltration of precipitation into the site reducing leachate (landfill liquids) production. This reduces the amount of leachate that needs to be pumped and treated from this site. There is also a requirement to secure this site from unauthorized access. The costs identified include acquiring fill for final cover, grading/drainage control, fencing, plantings, and signage, including associated engineering.

The expected life of this facility is 50 years.

With the 34 closed landfills in the City, there are occasions when there is a benefit to acquiring lands in proximity of these sites to provide additional buffer zones to minimize any impacts on adjacent private lands. There are also occasions when acquiring land would be beneficial to long term control, use, drainage works, or rehabilitation of a site. The cost identified includes the cost of acquiring land with associated administration costs.

WATER AND WASTE - SOLID WASTE DISPOSAL FUND

Note: *Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges*

The Brady Road Landfill currently uses a modified 33-year old construction trailer as its site office, lunchroom, and training area. A 36-year old former scale building has been converted for use as a washroom, locker room, and mechanical shop. Given the age and condition of these buildings, and the remaining site life for Brady Road Landfill of 100-150 years, a new staff building is warranted. The cost identified includes a new 380 square meter staff building complete with offices, washrooms, a locker room, training/meeting/visitor reception room, and mechanical shop. The amount shown in 2010 is for escalation since construction will not begin until 2010, after the Brady Landfill licencing process has helped to define the needs.

The expected life of this facility is 30 years.

WATER AND WASTE - SOLID WASTE DISPOSAL FUND

The remaining capacity at the Brady Road Landfill is approximately 100-150 years. The landfill operation expands laterally by first excavating a below ground cell, and installing a leachate (landfill liquids) collection system at the base of the excavation. Filling with refuse then progresses within the cell in layers until the desired height above ground has been achieved, at which time the next cell is constructed. The excavated material is valuable for covering successive layers of refuse. Cell excavations will be required in 2010 and in 2014. The cost identified includes the cost of excavating and stockpiling excavated soil, and installation of a leachate collection system, including associated engineering.

The expected life of this facility is 50 years.

The City of Winnipeg is committed to reducing greenhouse gases through the Climate Change Action Plan as approved by Council in September 2006. Landfills emit greenhouse gases as a mixture of methane and carbon dioxide called Landfill Gas (LFG). This project will install a LFG recovery and flare system that will reduce up to 97,000 tonnes of carbon dioxide equivalent per year from entering the atmosphere. The project includes installing a gas collection system, flare, improved final cover, and maintenance road access. There is also the potential for revenue from the sale of the recovered gas. This project is suitable as a private-public-partnership (P3). A P3 could also include other suitable LFG destruction or offset technologies.

The expected life of this asset is 20 years.

WATER AND WASTE - SOLID WASTE DISPOSAL FUND

Project Name: **Summit Landfill Leachate Collection Assessment**

Department: Water and Waste - Solid Capital Priority Rating: 3 - 3

Project: Waste Disposal
2062xxxxxy

Service: Solid Waste Collection and Disposal

The existing leachate collection system at the former Summit Road Landfill site is over 20 years old. Similar leachate collection systems have been subjected to clogging problems in the past. It is important to keep this system functioning effectively to be able to keep leachate levels down and contained, therefore an assessment is required to determine the effectiveness of the system at the Summit Road Landfill. The funding proposed for 2012 will involve retaining an engineering consultant to conduct investigations at the site and provide a report on the condition of the leachate collection system and any rehabilitation work required. Funding for any rehabilitation work required as a result of the investigations will be included in future budgets.

WATER AND WASTE - SOLID WASTE DISPOSAL FUND

Project Name: **Street Sweepings Recycling Program Implementation**

Department: Water and Waste - Solid Capital Priority Rating: 3 - 3

Project: Waste Disposal
2062xxxxxy

Service: Solid Waste Collection and Disposal

The administration has been directed to investigate the implementation of a program to recycle approximately 65,000 tonnes per year of street sweepings (mostly sand) from annual spring street cleanup. The street sweepings are currently hauled to the landfill for disposal. The funding identified for 2010 is for an engineering investigation and analysis to determine the details, cost and procurement of services for recycling the sweepings. This work is to be financed from Provincial Funding (Environmental Grant) account to be set up with funding from Winnipeg's share of the Provincial Environmental Fee Levy. It is expected that there will be a recovery of this cost from tipping fees generated from street sweepings starting in 2010.

WINNIPEG GOLF SERVICES - GENERAL CAPITAL FUND

Appendix 1: City of Winnipeg Profile

Location

Located at the geographic centre of North America, Winnipeg borders the provinces of Ontario to the east, Saskatchewan to the west, Nunavut to the North, and the U.S. states of Minnesota and North Dakota to the south.

Its geographic location places the city on the eastern edge of the Canadian prairies and the northern extension of North America's Great Plains region. The surrounding landscape is characterized by agricultural land utilized for grain production and livestock. In addition, the area includes forests, marsh landscapes, and various lakes and rivers including Lake Winnipeg, the third largest lake in Canada and 13th in the world.

Its central location makes Winnipeg easily accessible by air, road, and railway. Via major airlines, Winnipeg is only 2 hours from the cities of Calgary, Edmonton, Minneapolis, Chicago, and Denver. For those traveling by road east/west, Winnipeg is conveniently located on Canada's Trans Canada Highway and Yellowhead Route. For those traveling to and from the United States, Winnipeg is only 97 km (60 miles) north of the Canada-U.S. border and connects directly with Interstate 29. Winnipeg is also accessible by railway as a destination along the "Canadian" route operated by VIA Rail Canada.

Winnipeg's longitude and latitude coordinates are: 49 degrees 53 minutes 4 seconds north and 97 degrees 8 minutes 47 seconds west.

Time Zone

Winnipeg's central location on the continent places it within North America's Central Time Zone. The difference to Eastern Time and Mountain Time zones is only one hour. There is a two hour difference between Winnipeg and Atlantic or Pacific Time zones. Manitoba observes Central Standard Time and Daylight Saving Time. Daylight Saving Time begins at 2:00 a.m. local time on the second Sunday in March when clocks move ahead one hour. At 2:00 a.m. on the first Sunday in November, Manitoba clocks are turned back one hour and return to Standard Time.

Climate

Winnipeg experiences a continental climate characterized by four distinct seasons creating a variety of weather conditions throughout the year. Average temperatures range between -12 degrees Celsius (+10.4 degrees Fahrenheit) in the winter months to +26 degrees Celsius (+78.8 degrees Fahrenheit) in the summertime. Winnipeg receives over 2,300 hours of sunlight annually. Due to its northern location, Winnipeg residents enjoy up to 16 hours of sunlight daily during the summer months. Winnipeg averages approximately 51.4 centimetres (20.2 inches) of precipitation per year.

WINNIPEG AND ITS ECONOMY

(Excerpted from the 2009 City of Winnipeg Annual Financial Report)

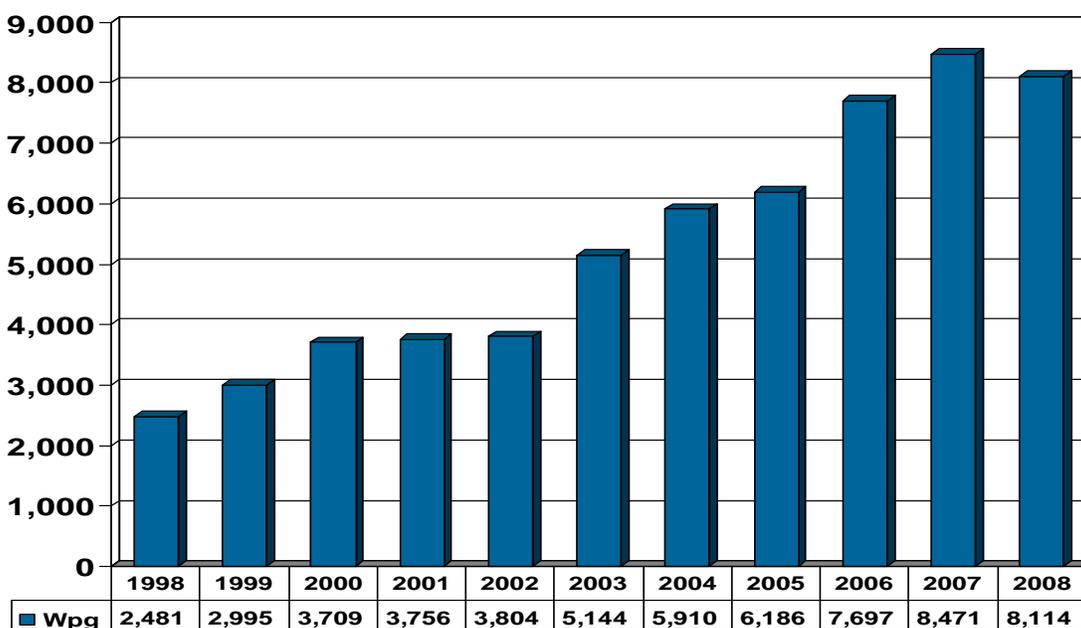

In the heart of the continent and geographic centre of Canada, Winnipeg is home to a vibrant, diverse economy and population. As the economic engine and capital city of Manitoba, Winnipeg has a population of 675,100, is home to 55% of Manitoba residents, and is the seventh-largest city municipality in Canada.

Described as the “cultural cradle of Canada,” Winnipeg offers a variety of arts, culture, sports, recreation and entertainment to satisfy every taste. Winnipeg celebrates a rich colourful history through many historic sites, exhibits, attractions and yearly festivals.

Winnipeg is characterized as having one of the most diverse economies in Canada, which allows the City to experience consistent and steady growth, in the face of unexpected economic downturns. **In comparing the economic diversities of the largest cities in the country, the Conference Board of Canada rates Winnipeg’s index at 0.91 out of 1.00, with the average of major cities at 0.82.** The year 2009 saw the economy across North America take a hard hit, yet despite a 2.5 per cent decline to the national economy, Winnipeg weathered the downturn well, experiencing only a 0.5 percent decline.

Winnipeg is a city that is vibrant and friendly, proud of its rich history and heritage, where people from around the world unite to live, work and play together. An ideal place for people of all ages and nationalities, the City offers affordable housing, an abundance of office and industrial space, low unemployment rates, manageable traffic volumes and a diverse economy.

Population Growth

Over the last decade (1999 – 2009), Winnipeg’s population, which presently stands at 675,100, has grown by 44,000 or seven per cent.

Winnipeg continues to experience modest population growth relative to other large Canadian cities. The population growth is largely due to immigration. In 2008, total provincial immigration reached just over 8,100 people. Historically, Winnipeg is destination to about 75 per cent of immigrants to Manitoba.

Housing Demand Rise Forecasted

Winnipeg’s housing starts moderated in 2009 to 1,811 units; however, they are expected to pick up in 2010 and then reach 3,000 units by 2012. A population increase over the next 22 years is forecasted at approximately 177,000 people, and as such the demand for housing is anticipated to continue. Over the last decade, since 2000, Winnipeg’s average resale house price has increased 133%. This means the average house price has more than doubled in value over the last ten years.

Property taxes remain in the low range compared to other Canadian cities.

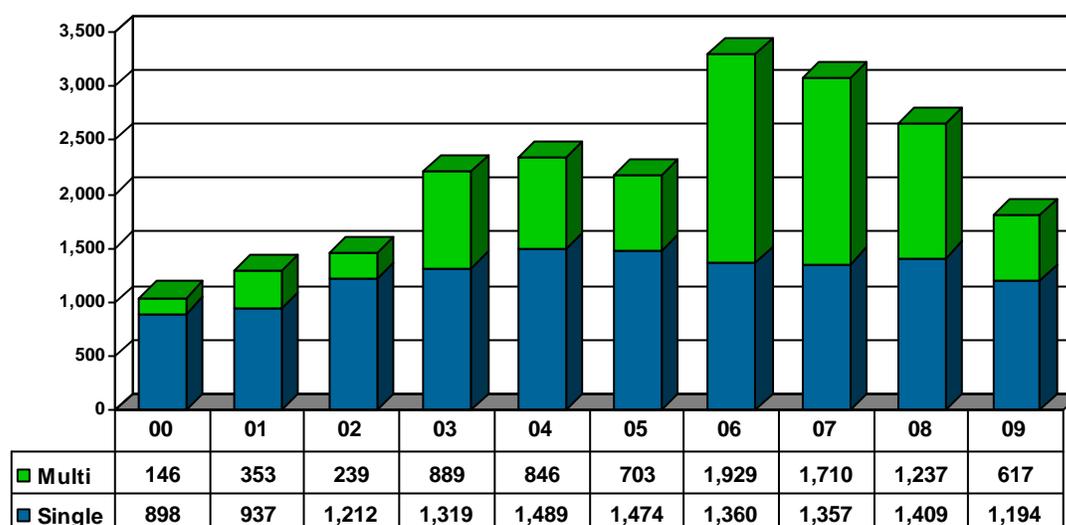

Winnipeg’s property tax ranking out of 14 large cities for the average house:

- **3rd lowest for Municipal property taxes only**
- **3rd lowest for total property tax bill and utilities***

*Total owner costs include municipal taxes, school taxes, municipality-charged utilities, and other utilities.

Economic Indicators

Winnipeg's Gross Domestic Product (GDP) in 2009: \$25.0 billion (in 2002 dollars).

The Winnipeg region has 55 per cent of Manitoba's population and generates 64 per cent of the province's total economic output.

Building permit values in 2009: \$1.111 billion
Labour Force: 418,000

Value of Building permits (\$ millions) City of Winnipeg

	2005	2006	2007	2008	2009

Major Economic Strengths

Gross Domestic Product

Winnipeg's 0.5 per cent GDP shrinkage in 2009 was first in 18 years, but remained less than Canada's. A stabilizing manufacturing sector and an improved outlook for most industries suggests a healthy 2.2 per cent GDP advance in 2010. Winnipeg is expected to bounce back with a predicted 2.8 percent gain between 2010 and 2013.

Labour Market

Winnipeg's labour force grew by one per cent in 2009 and the employment rate remained stable. The City's average unemployment rate surpassed that of the national average at 5.4 per cent. Job growth is expected to remain modest in 2010, but even slight employment increases will fuel persistent population growth and increase in housing starts.

Winnipeg's mature and stable economy will serve as a foundation for steady population growth over the medium term (2009-11).

In the long term, Winnipeg's labour force is expected to undergo major changes, partly due to the aging population. Fortunately, the Conference Board of Canada forecasts Winnipeg will experience increasing immigration – reaching nearly 11,000 immigrants annually by 2020. Thanks to the Province of Manitoba's successful immigration policy over the past decade, immigration is expected to continue over the long term, which will help feed and support the city's labour force growth.

While Winnipeg's manufacturing sector is recovering from 11.4 per cent output drop due to economic slowdown and the US/Canadian currencies being at or near par 2009. Local manufacturing output growth is pegged at 2.5 per cent in 2010 and is forecast to rise to 3.4 per cent annually from 2012 to 2014. Overall, the industry is expected to keep generating high-paying quality jobs and stabilize over the next few years.

Investment and Major Construction Projects

On the heels of remarkable double-digit growth in three out of the past four years, Winnipeg's construction sector is expected to decrease slightly over the next two years. While the forecast predicts a slight dip of 2.2 per cent in 2010 and 0.50 per cent in 2011, growth is expected to rebound again in 2012 and average 3.7 per cent in 2012 to 2014.

Construction and land assembly are in progress for the \$138 million first phase of the **Southwest Rapid Transit Corridor**, connecting the downtown to the University of Manitoba. **Road upgrades in Waverley West and the expanding Winnipeg Active Transportation network** are featured in the upcoming year. Longer term projects include the \$195 million **Disraeli Bridge Project** which will see entirely new bridges built with construction beginning in 2011. The existing bridge piers will be transformed into a separate Active Transportation bridge alongside the new freeway. Construction of a new \$137.5 million **football stadium** to be located at the University of Manitoba will also get underway in the coming year.

Appendix 2: Cost Estimation Classification System

Class 5	Typical estimate methodology is judgment and not predicted precisely. (Concept Screening)		
Level of Project Definition	0 to 2%	Expected Accuracy	High: +30% to +100% Low: -20% to -50%

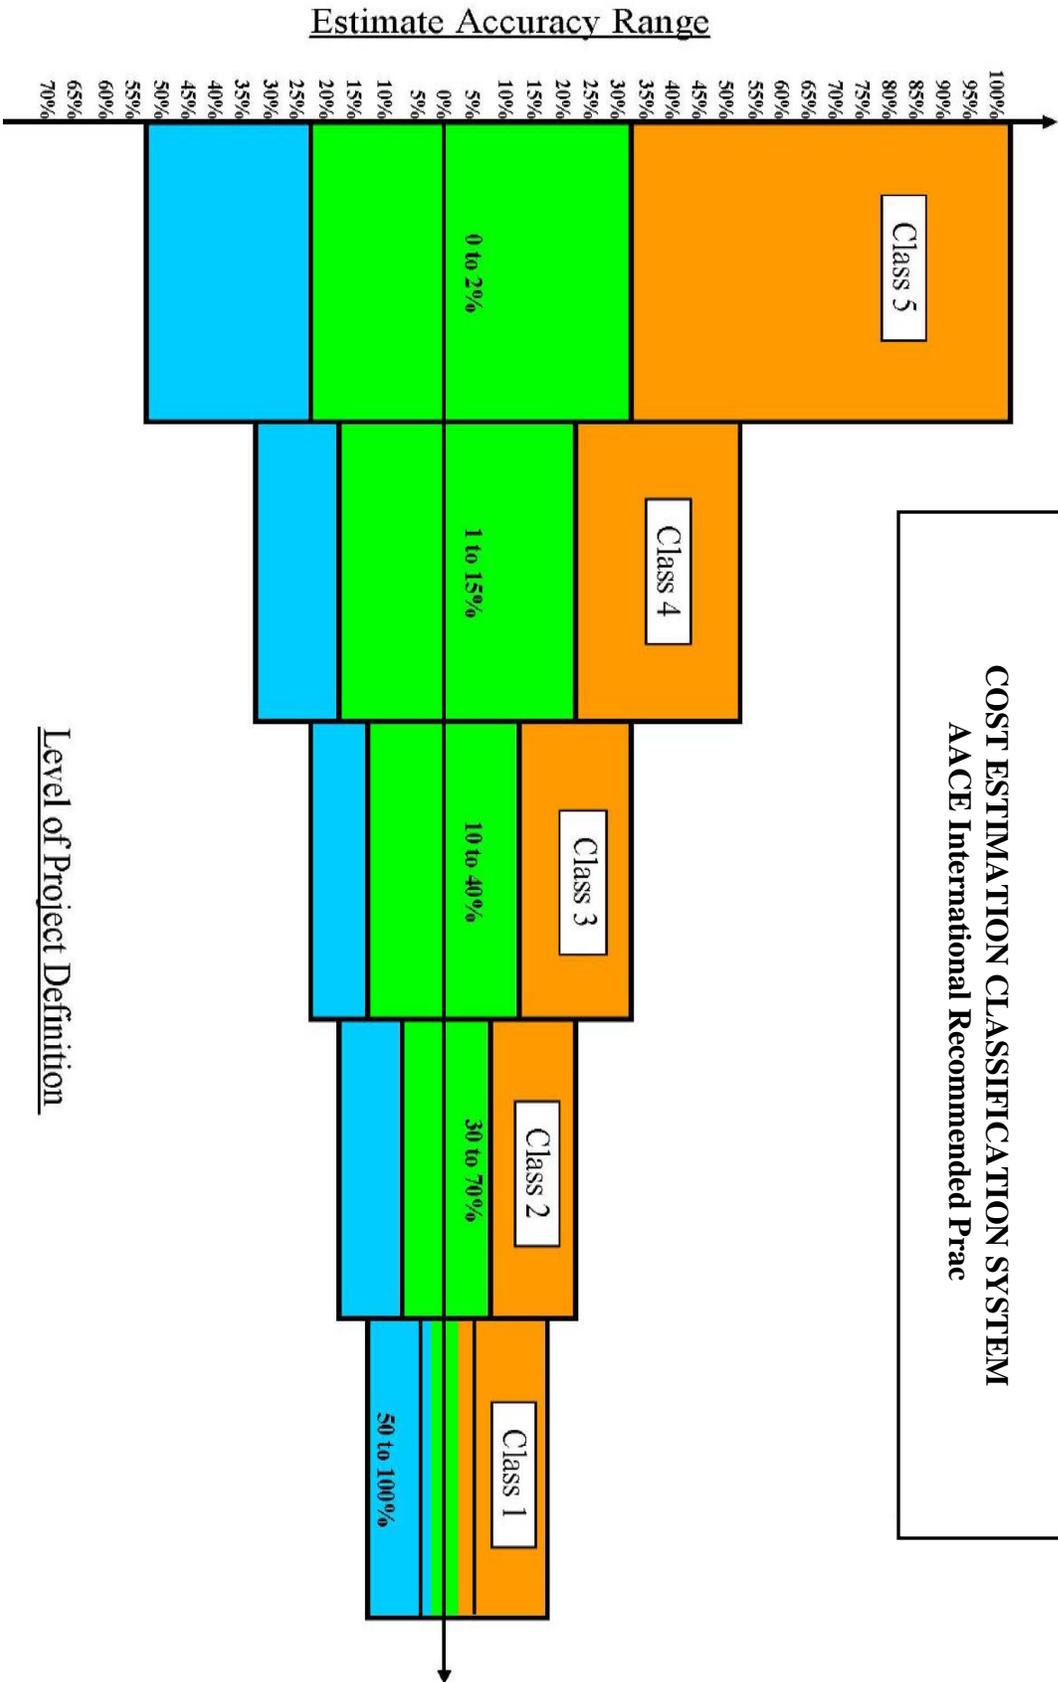

Class 4	Typical estimate methodology primarily judgment. (Concept Study or Feasibility)		
Level of Project Definition	1 to 15%	Expected Accuracy	High: +20% to +50% Low: -15% to -30%

Class 3	Typical estimate methodology is a mixture of deterministic and judgment but primarily judgmental. (Budget Authorization or Control)		
Level of Project Definition	10 to 40%	Expected Accuracy	High: +10% to +30% Low: -10% to -20%

Class 2	Typical estimate methodology is primarily deterministic. (Control or bid/tender)		
Level of Project Definition	30 to 70%	Expected Accuracy	High: +5% to +20% Low: -5% to -15%

Class 1	Typical estimate methodology is deterministic. (Check Estimate or bid / tender)		
Level of Project Definition	50 to 100%	Expected Accuracy	High: +3% to +15% Low: -3% to -10%

Based on Association for the Advancement of Cost Engineering (AACE) International Recommended Practice No. 17R97 Cost Estimating Classification System

Appendix 3: Capital Priority Rating System

The purpose of the Priority System is to provide a set of criteria by which proposed spending programs can be ranked in order of priority on a City-wide basis over the whole range of City functions and activities.

The System recognizes two basic factors, namely, priority of function (priority grouping) and degree of priority (sub-group rating).

Priority Groupings	Priority Points	
	Main	Sub
<p>A. <u>Vital Services</u> Those basic elements of essential services which are vital to the day to day domestic, industrial, and commercial life of the City. Capital expenditures within this group would be related to:</p> <ol style="list-style-type: none"> 1. Sewage Disposal Collection System and treatment facilities. 2. Water aqueduct reservoirs, pumping stations and trunk feeder mains 	5	
<p>B. <u>Essential Services</u> Those basic services characterized by a high degree of public necessity, convenience and safety. Capital expenditures within this group would be related to:</p> <ol style="list-style-type: none"> 1. Public Transportation 2. Fire and Police Protection 3. Garbage Collection and Disposal 4. Regional Street System 5. Land Drainage 	3	
<p>C. <u>Standard Services</u> Those services which would reasonably be expected to be provided to all citizens of the City for their convenience and in accordance with generally accepted standards. Capital expenditures within this group would be related to:</p> <ol style="list-style-type: none"> 1. Residential Street and Lane Construction (Local Improvements or other). 	2	

Priority Groupings		Priority Points	
		Main	Sub
D.	<u>Desirable Services</u>	1	
	Those services having an aesthetic social, cultural, educational or entertainment value. Capital expenditures within this group would be related to:		
	1. Parks and Related Facilities		
	2. Recreational Facilities		
	3. Libraries		
	4. Museums		
	<u>Sub-Group Rating</u>		
	Could cause a serious imminent disruption of service (should be done without undue delay).		4
	Would extend or complete the expected usefulness and/or reliability of a facility (should not be delayed for more than 1 year).		3
	Would improve a facility which is at present sub-standard or approaching a high degree of obsolescence (should not be delayed for more than 2 years)		2
	Would qualify as a minimum sustaining program - desirable but not absolutely essential (could be delayed for 3 years or more).		1
Note:	A bonus of up to 2 points may be added to any of the subcategories 1 to 4 for projects that clearly contribute specifically to the City's declared development objectives.		

Appendix 4: Public Private Partnership Payments as a Percentage of Cash to Capital/Gas Tax

<u>(In thousands of dollars)</u>	<u>2010</u>	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>2014</u>	<u>2015</u>

Total Cash to Capital and Gas Tax:	<u>105,928</u>	<u>107,928</u>	<u>109,928</u>	<u>111,928</u>	<u>113,928</u>	<u>115,928</u>
Payments as a Percentage of Cash to Capital and Gas Tax	<u>2.24%</u>	<u>25.56%</u>	<u>20.61%</u>	<u>22.40%</u>	<u>22.00%</u>	<u>21.62%</u>

Notes:

- 1 Public Private Partnership Payments include Annual Service/Lease/External debt and financing charges.
- 2 The Province of Manitoba recently announced an additional \$53.3 million over a ten-year period for roads funding to the City of Winnipeg, amending its contribution to the City under the Manitoba-Winnipeg Infrastructure Fund.
- 3 This analysis excludes amounts in the Capital Investment Fund.
- 4 Estimated amounts for planned Public Private Partnerships are subject to change based on the final procurement process.

- 1 Revised to reflect March 22, 2005 Council decision to reduce the previously adopted 2005 capital program and the internal financing requirement by \$5.0 million.
- 2 Budget as adopted by Council on February 21, 2006. No revisions made to reflect Council's March 21, 2006 decisions to increase cash to capital for 2006 to \$56.5 million, nor to increase authorization for Regional and Local Streets by \$1 million to reflect the tabling of the Provincial Budget.
- 3 Revised to reflect January 24, 2007 Council decision to increase the Wastewater Renewal Program by \$3 million.
- 4 Revised to reflect March 26, 2008 Council decision to reduce the previously adopted 2008 capital program and the internal financing requirement by \$400,000.

Appendix 6: Statement of Current and Authorized Debenture Debt

The following information provides an overview of the City's authorized net debt as at December 31, 2009. The City issues both Sinking Fund and Serial or Instalment debentures for funding capital expenditures. On a consolidated basis, the City includes mortgages and bank loans incurred by wholly-owned corporations of the City, as well as capital lease obligations, as outstanding debt of the City. The schedule below relates only to debenture debt for the City's tax-supported, utility operations, Transit, Civic Accommodations, and Facilities Maintenance Funds.

Beginning in 1998, the City adopted capital budgets that did not require the issuance of new tax supported debt (with the exception of local improvement costs to be repaid by taxpayers). As a result, the level of net tax-supported debt has increased by \$305 million since 1998.

In February 2005, Council adopted The City of Winnipeg Debt Management Policy. The City recognized that the foundation of any well-managed debt program is a comprehensive debt policy. This Policy sets forth the parameters for issuing debt and managing outstanding debt and provides guidance to decision makers regarding the timing and purposes for which debt may be issued and the types of debt and structural features that may be incorporated.

Debenture Debt (In Thousands of \$)	Tax-Supported	Utility Operations and Other Funds	Combined Total
Gross Debenture Debt as at December 31, 2008	324,746	348,587	673,333
Less: Equity in Sinking Fund	(159,916)	(114,424)	(274,340)
Net Debt	164,830	234,163	398,993
Unallocated Sinking Fund Surplus	(1,817)	-	(1,817)
Net Debenture Debt as at December 31, 2008	163,013	234,163	397,176
Debt Maturing during 2009	(121,677)	(28,201)	(149,878)
Sinking Fund Incremental Change during 2009	69,448	7,683	77,131
New Debt Issued in 2009	43,117	5,363	48,480
Net Debt Outstanding as at December 31, 2009	153,901	219,008	372,909
Outstanding Borrowing Authorization	175,449	232,501	407,950
New Borrowing Authorized in 2010 Capital Budget	30,000	75,723	105,723
Total Authorized Net Debt	359,350	527,232	886,582

Note: Does not include capital lease obligations, debt incurred by Winnipeg Enterprises Corporation and Winnipeg Housing Rehabilitation Corporation, or debt incurred or authorized for the City's Special Operating Agencies.

The City issued \$48.48 million in debt in 2009 to refinance the maturity of a sinking fund debenture on September 30th, 2009.

On September 30th, 2009, prior to the adoption of the capital budget, the City authorized \$75 million for the Disraeli Bridge and Overpass Facility. New borrowing authorized in the 2010 Capital Budget of \$105.723 million includes \$30 million for the Chief Peguis Trail and \$75.723 million for the Sewer and Solid Waste Disposal Systems.
