Removal of hazardous materials shall be dealt with by the City and the Contractor shall await further instruction by the Contract Administrator.

#### E3. FLOW CONTROL AND TEMPORARY BY-PASS PUMPING

E3.1 Description

- E3.1.1 This specification covers standby by-pass pumping capacity of flow during installation of the standby engine and station forcemain modifications for the Westwood Wastewater Pumping Station. This system will only operate if there is a station power outage.

## E3.2 Materials

### E3.2.1 Standby By-Pass Pumping Equipment

- (a) Provide 2 non-clog, submersible pumping units, each sized to meet or exceed the required capacity. Each pump shall be complete with all required piping, fittings, floats and pump controls suitable for temporary installation in a sewer manhole.
- (b) Provide model and capacity curves to the Contract Administrator for approval.
- (c) Power supply to be suitably sized for pumping equipment complete with all required controls. Fuel to be in lockable, tamperproof container, approved by Contract Administrator.

### E3.2.2 Fittings and Appurtenances

- (a) Fittings, couplings and appurtenances to be used for repairs to existing forcemains and sewers to be approved products for underground use in the City of Winnipeg.

### E3.2.3 Bedding and Backfill

- (a) Bedding and initial backfill material to be sand in accordance with CW 2030.

## E3.3 Construction Methods

### E3.3.1 General

- (a) In the event of a power outage and a corresponding rise in the manhole water level to a predetermined point, the pumping system shall come on automatically. Maintain level of sewage in existing sewers below the critical basement elevation shown on the Drawings or as listed in the Specifications. The Contract Administrator will provide a mark at a convenient location for reference.
- (b) Allowable shutdown times are approximate and the Contractor must monitor the upstream system at all times to ensure the stored level of wastewater does not exceed the critical basement elevation.
- (c) Provide a flow control plan to the Contract Administrator for review before construction starts.

### E3.3.2 Expected Wastewater Flow to the Westwood Wastewater Pumping Station

- (a) The expected peak dry weather flow (PDWF) to the Station is 190 l/s (3011 US gpm).
- (b) Critical Basement elevation is 230.872 m.
- (c) Sewers can receive flow of an undetermined amount from watermain breaks, snow melt, rain and other unforeseen sources. The Contractor will be responsible to monitor the flow in the sewer and adjust work activities accordingly, such as putting the spare standby by-pass pump into operation to handle any excessive flows due to unforeseen flow above the amount identified for PDWF.
- (d) There shall be no claim for additional costs or time due to increased standby pumping operations from high wet weather flows.

### E3.3.3 Standby By-Pass Pumping

- (a) For by-pass pumping operations, provide a minimum of two submersible pumps at all times, each with a capacity equal to or greater than the listed PDWF for that station. Both pumps are to be installed and available for operation. A replacement pump with the required capacity shall be immediately provided if one of the two original pumps has to be removed from the site for repairs.
  - (i) A combination of smaller sized pumps may be used concurrently if the total discharge flow of the pumps meets the PDWF volumes identified in E3.3.2(a)

and providing replacement pumps are available on-site to maintain the PDWF volume.

- (b) Surface mount, vertical lift suction pumps are not acceptable.
- (c) Install standby by-pass pumping as shown on the Drawings.
- (d) Provide detailed information for pumping equipment to be used including pump capacity and dimensions, depth of submergence, pump controls and installation details to the Contract Administrator for review before construction starts.
- (e) Power supply to be approved by the Contract Administrator before set-up. Locate the power supply where it will not adversely affect local residences. Location to be approved by the Contract Administrator before construction starts.
- (f) Provide suitable traffic ramps approved by the Contract Administrator if the by-pass pumping discharge pipe and power supply cables are laid across vehicle or pedestrian traffic areas.
- (g) Provide a check valve on the by-pass pumping discharge pipe to prevent cycling when the pumping station is activated.
- (h) The Contractor is advised that the pumping station will remain in service while the work is being completed. The Contractor shall cooperate and coordinate with the City to allow full access at all times for City staff to carry out maintenance and operational duties.
- (i) The Contractor shall ensure temporary by-pass pumping equipment and materials will be properly insulated and heated, if required, to be protected from freezing and to maintain proper functioning during cold weather.
- (j) Standby by-pass pumping equipment and materials shall remain on-site until station construction is completed as described in these Specifications and to the satisfaction of the Contract Administrator.
