Irvin Slike

Project Coordinator

Email: islike@winnipeg.ca

Telephone No. 204 986- 4103

Facsimile No. 204 774- 6729

D2.2 All correspondence or contact by Proponents with the City in respect of this RFP must be directly and only with the City's Project Manager. Failure to restrict correspondence and contact to the Project Manager may result in the rejection of the Proponents Proposal Submission.

D2.3 At the pre-commencement meeting, the Project Manager will identify additional personnel representing the Project Manager and their respective roles and responsibilities for the Services.

D2.4 Proposal Submissions must be submitted to the address in B7.11

D3. BACKGROUND

D3.1 The Province of Manitoba has issued a licence to the Brady Road Resource Management Facility. This license requires that a Surface Water Management Plan be submitted on or before August 2013. The plan shall include identification of all existing and potential surface waters within the land boundaries of the facility. Once identified the water source will have an ultimate plan for management that includes but not limited to an acceptable provincial drainage licence.

D3.2 There are three type of surface water that may exist at any one time at the Brady Road facility.

(a) "Clean water" This means non impacted surface water, examples include rainwater that has contacted grassed and closed parts of Brady Landfill, an existing grassed field, etc.

(b) "Impacted water" This means clean water that has come in contact with waste, segregated storage areas, and composting pad, etc

(c) "leachate" This means water that has percolated through waste and has been transported outside a landfill cover system

D4. SCOPE OF SERVICES

D4.1 The Consultant shall analyze and hydraulically model each identified water source in volume and treatment requirements. The Consultant shall include considerations for minimizing impacted water and leachate. The minimization methods should be clearly identified and justified by demonstrated examples in other landfills or solid waste facilities. Similarly the erosion control measures must be identified and justified using the aforementioned criteria. The stormwater management works shall be designed for the twenty-five (25) year event and the erosion control measures shall be designed for the two (2) year event.

- D4.2 The impacted water will be directed to a series of engineered wetlands to equalize flows and settle out fines. Each area of potential impact will have an engineered pond located and sized to capture this water. These are identified in Appendix A there are expected to be at least two engineered wetlands requiring detailed design for surface water management in 2013.
- D4.3 Two borrow areas have been excavated to extract clay for the Leaf and Yard Waste pad. The most current survey information is contained in Appendix B these borrow areas should be assessed as to the work done to date for their use as these engineered wetlands ponds.
- D4.4 Provide detail design of engineered wetlands incorporating existing structures and water features as much as possible, including conveyance ditches. The integration of existing borrow pits if suitable as engineered wetlands or holding ponds for impacted water is desirable. The Surface Water Management Design should be complete by the date stated in D9.1(a).
- D4.5 The liner design shall incorporate native Brady Road clay that has been compacted to achieve a permeability of 1×10^{-7} cm/sec and is one metre thick. The detailed design shall be at a minimum of one inch equals fifty feet scale and include sufficient detail for construction layout. The detail design for the wetlands and stormwater management ponds should include a "Class 3" cost estimate. These construction designs and specifications shall be completed on or before the date stated in D9.1(b).
- D4.6 Perform contract administration/ construction management services for construction of the engineered wetlands and all other recommended structures or features. Consultant is required to provide all necessary personnel, buildings and/or equipment to accomplish this task. All geotechnical sampling and testing, all surface water collection, analysis, monitoring, and/or modelling necessary to complete this task will be the Consultant's responsibility.
- D4.7 Design for top-to-bottom erosion control and water management on the closed and open landfill including engineered structures with consideration to best landfill practices. Special emphasis should be given to temporary drainage works used to convey stormwater from the top of an active landfill area to the bottom without eroding the slope. A high degree of consideration will be given to those works or methods that can easily be constructed by existing resources available at the landfill and using readily available, easily managed materials.
- D4.8 Provide a third party review of the City's current surface and ground water monitoring program. A review of the existing program will include compliance with existing regulations as well as recommendations for meeting any future compliance considerations. These future considerations will result from pending or proposed legislation or examples of best management practices. Additionally the consultant should provide an engineering review and develop construction standards and practices for the City's special leachate control measures and designs.
- D4.9 Consider the City's draft Landfill Operating Procedures as they pertain to the Surface Water Management Plan. The final Surface Water Management Plan should be submitted as Final on or before the date stated in D9.1(c).
