E2. PROTECTION OF EXISTING TREES

- E2.1 The Contractor shall take the following precautionary steps to prevent damage from construction activities to existing boulevard trees within the limits of the construction area:
- the Contractor shall not stockpile materials and soil or park vehicles and equipment on boulevards within two (2) metres of trees;
 - trees identified to be at risk by the Contract Administrator are to be strapped with 25 x 100 x 2400 mm wood planks, or suitably protected as approved by the Contract Administrator;
 - excavation shall be performed in a manner that minimizes damage to the existing root systems. Where possible, excavation shall be carried out such that the edge of the excavation shall be a minimum of 1.5 times the diameter (measured in inches), with the outcome read in feet, from the closest edge of the trunk. Where roots must be cut to facilitate excavation, they shall be pruned neatly at the face of excavation;
 - operation of equipment within the dripline of the trees shall be kept to the minimum required to perform the work required. Equipment shall not be parked, repaired, refuelled; construction materials shall not be stored, and earth materials shall not be stockpiled within the driplines of trees. The dripline of a tree shall be considered to be the ground surface directly beneath the tips of its outermost branches. The Contractor shall ensure that the operations do not cause flooding or sediment deposition on areas where trees are located;
 - Work on-Site shall be carried out in such a manner so as to minimize damage to existing tree branches. Where damage to branches does occur, they shall be neatly pruned.
- E2.2 All damage to existing trees caused by the Contractor's activities shall be repaired to the requirements and satisfaction of the Contract Administrator and the City Forester or his/her designate.
- E2.3 No separate measurement or payment will be made for the protection of trees.

E2.4 Except as required in clause E2.1(c) and E2.1(e), Elm trees shall not be pruned at any time between April 1 and July 31.

E3. TRAFFIC CONTROL

E3.1 Further to clauses 3.6 and 3.7 of CW 1130:

- (a) where directed, the Contractor shall construct and maintain temporary asphalt ramps to alleviate vertical pavement obstructions such as manholes and planing drop-offs to the satisfaction of the Contract Administrator. Payment shall be in accordance with CW3410;
- (b) in accordance with the Manual of Temporary Traffic Control in Work Areas on City Streets, the Contractor ("Agency" in the manual) shall make arrangements with the Traffic Services Branch of the City of Winnipeg to place all temporary regulatory signs. The Contractor shall bear all costs associated with the placement of temporary traffic control devices by the Traffic Services Branch of the City of Winnipeg in connection with the works undertaken by the Contractor.

E4. TRAFFIC MANAGEMENT

E4.1 Further to clause 3.7 of CW 1130:

E4.1.1 Maintain a minimum of three through lanes of traffic westbound under the following conditions:

- (a) when no work is being performed on the Site;
- (b) during the hours of 15:30 and 17:30;
- (c) at all other times the Contractor will be required to maintain a minimum of two (2) lanes of traffic.

E4.1.2 Further to E4.1.1, when no work is being performed on a portion of the Site more than 500 m in length, the Contractor shall maintain three lanes in the area where no work is being performed. Depending on what tasks are being performed, the Contractor shall manage traffic around their crews with a moving or growing protected Work zone as best as possible to minimize the length of the closure to the best of their ability. In other words the Contractor will not be permitted to close the adjacent lane to that under construction for the entire length of the project if a work activity is only taking place at one end. During work types that require the entire adjacent lane closed at one time (such as rolling and cooling of the asphalt overlay) the adjacent lane to that under construction for the entire project length will be permitted to be shut down.

E4.1.3 Occasional lane closures may be necessary in the eastbound lanes to facilitate detectable tile installation. Eastbound lanes closures are subject to the following conditions:

- (a) no lane closures permitted when no work is being performed on the Site, unless concrete is curing and formwork prevents the use of the lane;
- (b) no lane closures permitted during the hours of 07:00 to 09:00.

E4.1.4 Mainline paving shall not occur during the hours of 15:30 to 17:30 unless authorized by the Contract Administrator.

E4.1.5 Where left turn lanes exist, an additional lane to accommodate the left turn storage lane shall be maintained at all times.

E4.1.6 Where left turn movements exist at other locations within the project area, construction on the median lane must allow for access to the median opening.

E4.1.7 Median openings, intersections, and private approaches to remain open to traffic unless joint/slab repairs or planing/paving operation require temporary closure. Temporary closures to be staggered such that consecutive intersections are not closed at the same time.

- E4.1.8 Should the Contractor be unable to maintain pedestrian or vehicular access to a residence or business, he shall review the planned disruption with the business or residence and the Contract Administrator, and take reasonable measures to minimize the impact. The Contractor shall provide a minimum of twenty-four (24) hours notification to the affected residence or business and the Contract Administrator, prior to disruption of access.
- E4.1.9 Cross streets, private approaches, and median openings may be temporarily closed for short periods during the asphalt placement and compaction Works to allow for mainline grade control devices and asphalt compaction. Contractor to minimize temporary closures by "stringing" short sections, and taking down "stringline" as soon as the asphalt mat has been rolled and is safe for cross street travel.
- E4.1.10 Flag persons may be necessary to maintain the flow of traffic during certain Work operations.
- E4.1.11 Pedestrian and ambulance/emergency vehicle access must be maintained at all times.
- E4.1.12 Winnipeg Transit access to be maintained, including bus stops. Should the Contractor be unable to maintain bus stops or side street bus routes, it shall be reviewed with the Contract Administrator at least forty-eight (48) hours to see if modifications can be made.
- E4.2 The Contractor is responsible for supplying and installing all signage in accordance with the Manual of Temporary Traffic Control on City Streets, 2015 Edition.
- E4.2.1 Further to the Manual of Temporary Traffic Control on City Streets, 2015 Edition, all retro reflective sheeting on temporary traffic signs, traffic barricades and traffic control devices must be Type VIII (High Intensity) retro reflective sheeting (ASTM D4956) and barricades must show vertical striping.

E5. PEDESTRIAN SAFETY

The Contractor shall be responsible for maintaining the snow fence in a proper working condition. No measurement for payment shall be made for this work.

The Contractor shall bear all costs associated with temporary repairs and their maintenance.

The Contractor shall mount each sign securely to a rigid backing material approved by the Contract Administrator. The Contractor shall fasten each sign to a suitable support and erect and maintain one sign at each street as directed by the Contract Administrator. When the Contract Administrator considers the Work on the street complete, the Contractor shall remove and dispose of the signs and supports.
