### **E13. WORKING IN CLOSE PROXIMITY TO A FEEDERMAIN**

- E13.1 Prior to any construction, exploratory excavations at the existing 1,050 mm Kildonan Feedermain on Five Street and the existing 600 mm Old Kildonan Feedermain on Watson Street at Jefferson Avenue, in accordance with E13, are to be completed so as to confirm depth and location of the feedermain, for any location where works are to be completed within close proximity to the existing feedermain.
- E13.2 Close proximity will include any excavation within five (5) metres of the existing feedermain location shown on the drawings.
- E13.3 Granular material, construction material, soil or other material, shall not be stockpiled on the feedermain or within five (5) metres of centerline of the feedermain.
- E13.4 Stage construction such that the feedermain is not subjected to significant asymmetrical loading at any time.
- E13.5 Where work is in close proximity to the feedermain, utilize construction practices and procedures that do not impart excessive vibration loads on the feedermain or that would cause the settlement of the subgrade below the feedermain.
- E13.6 Concrete demolition and removal within five (5) metres horizontally of the feedermain shall be completed by saw cutting and removal, or use of hand held jack hammers. Use of machine mounted concrete breakers within five (5) metres of a feedermain shall not be permitted.

### **E14. EXPLORATORY EXCAVATIONS AT FEEDERMAIN**

- E14.1 Concrete demolition and removal to be in accordance with E12.6
- E14.2 Excavations deeper than one (1) metre shall be done using vacuum excavation methods to minimize the potential for any damage to the feedermain. The purpose of exploratory excavations at feedermain is to determine the excavation method to be used to install new watermain infrastructure within close proximity, as defined in E12.2, to the existing feedermain. Depending on the depth of the excavation required to install the works in relation to the existing feedermain, the following excavation methods shall be implemented:
- (a) Where the excavation elevation is higher than one (1) metre above the crown elevation of the feedermain pipe, excavations by normal methods with a backhoe/excavator will be permitted.
  - (b) Where part of the excavation elevation is located within one (1) metre of the crown elevation of the feedermain pipe, excavation using a backhoe/excavator will be permitted to a depth of one (1) metre above the crown of the feedermain. Excavation below this depth must be by soft digging / vacuum excavation methods only.
  - (c) Where part of the excavation elevation is located below the crown elevation of the feedermain pipe but higher than the invert elevation of the feedermain pipe, a higher standard of care is required to minimize the impact on the feedermain. Excavation using a backhoe/excavator will be permitted to a depth of one (1) metre above the crown of the feedermain. Excavation below this depth must be by soft digging / vacuum excavation methods only. Shoring and bracing may be required to minimize the loss of soil or bedding material from around the feedermain.

- (d) Where part of the excavation elevation is located below the invert elevation of the feedermain pipe, a very high standard of care is required to minimize the impact on the feedermain pipe. The excavation must be completed as described in E13.2c, however, engineered shoring must be installed in the excavation shaft to minimize disruption to the feedermain. Engineered Shoring must comply with E14.

- E14.3 Backfill for excavations within close proximity to the feedermain to be done in accordance with CW 2030, using Class 2 backfill. Flood tamping is not permitted in a zone within 2.5 m (horizontal offset) from the edge of the feedermain pipe. Granular backfill shall be placed and mechanically compacted in maximum 300 mm thick lifts. Mechanical compaction equipment is limited to walk behind vibratory compactors only. Compaction using a backhoe / excavator bucket is not permitted due to the potential for over-compaction and vibration.
- E14.4 Exploratory excavations of the feedermain for excavations in close proximity shall be measured on a unit basis per exploratory excavation required and paid for at the Contract Unit Price of "Exploratory Excavation at Feedermain" in Form B of the Bid Submission.
- E14.5 Any additional costs associated with excavation in close proximity to a feedermain, backfilling, or restoration shall be incidental to the cost of the watermain renewal and will be included in the Contract Unit Price bid for "Watermain Renewal" in Form B of the Bid Submission.

## **E15. ENGINEERED SHORING**

- E15.1 The type, strength and amount of shoring and bracing shall be such as the nature of the ground and site conditions may require to protect the feedermain from loss of bedding material below the pipe springline.
- E15.2 All material used for shoring construction shall be in a like-new condition, and shoring and bracing shall be so spaced and dimensioned as to prevent caving, loss of ground, surface settlement, or squeezing of the soil beyond the neat lines of the excavation. Shoring material shall be free from defects that might impair its strength or suitability for the Work.
- E15.3 Prepare design calculations as required to facilitate review of the submission for conformance with the Contract Documents.
- E15.4 Submit Shop Drawings and design calculations for the shoring/excavation system designed and sealed by a Professional Engineer registered and licensed to practice in the Province of Manitoba, and experienced in the structural design of shoring systems. The designer of the shoring system shall inspect the system during construction and certify, in writing to the Contract Administrator, that construction is in conformance with the approved design.
- E15.5 Shoring and bracing shall be removed in stages while backfilling the excavation.
- E15.6 All work associated with the design and provision of engineered shoring to protect the feedermain shall be measured on a unit basis per excavation requiring engineered shoring and bracing, and paid for at the Contract Unit Price of "Engineered Shoring" in Form B of the Bid Submission. Requirement for engineered shoring will be determined by the Contract Administrator based on the findings of the "Exploratory Excavations at Feedermain" completed by the Contractor in accordance with E13.

## **E16. CROSSING THE FEEDERMAIN**

- E16.1 All watermains and water services crossing the feedermain must maintain a minimum clearance of 0.5 metres between the top of the feedermain and the bottom of the watermain or water service pipe, or a minimum clearance of 1.0 metres between the bottom of the feedermain and the top of the watermain or water service pipe, or as stated by the Contract Administrator.
- E16.2 A shaft must be excavated in accordance with E13, four (4) metres from the centreline of the feedermain to confirm the alignment and elevation of the drilling rod before it crosses the

feedermain. This confirmation must be witnessed by a City of Winnipeg Water and Waste representative designated by the Contract Administrator.
