QUESTIONS AND ANSWERS

- Q1: Item 19 (from Form N – Requirements) states “*The System supports the creation of a record to document the completion of an official business transaction. Where a record in the System is made up of more than one component, the System shall be able to maintain relationships between all components*”, please provide an example.
- A1: The intent is to determine that when a record is created, there is the ability to preserve the integrity of the record to ensure the same semantic meaning. As an example, when a record of a transaction is completed, the record must be saved or reproducible for export, including all background context. Furthermore, if a record was correspondence back to a customer, that correspondence would need to be either saved as-is or reproducible, to ensure capturing the message and all related context for that communication (i.e., the reproduced record must be identical to the original).
