Dear Ms. Burland-Ross:

Attached please find the February 2011 Monitoring Reports for Licence No. 2669 E RR issued for the City of Winnipeg West End Water Pollution Control Centre (WEWPCC), Licence No. 2684 RRR issued for the City of Winnipeg North End Water Pollution Control Centre (NEWPCC) and Licence No. 2716 R issued for the City of Winnipeg South End Water Pollution Control Centre (SEWPCC).

Please note the following respecting the report for Licence #2669 E RR:

1. On February 2, 26 and 27, there were no 24 composite effluent samples due a sampler malfunction.
2. On February 28, there was no grab sample because the sample collected was not representative.
3. We are pleased to report that the ammonia results have met the limit set in the licence. The total nitrogen thirty-day rolling average met the limit set in the licence in February. The total phosphorus thirty-day rolling average met the limit set in the licence for the last 7 days in February. The total phosphorus results met the limit set in the licence coming out of the treatment plant but the levels increase through the polishing cells.
4. The TSS results met the limit set in the licence in February.
5. There was no cBOD5 result on February 6 due to a quality control failure. The cBOD5 results met the limit set in the licence in February.
6. We are pleased to report that during the month of February the fecal coliform and E. coli results met the limits set in the licence.
Please note the following respecting the report for Licence #2684 RRR:

1. The TSS results for February met the limit set in the licence.

2. There were no results for BOD5 and cBOD5 on February 6 due to a quality control failure. The BOD5 results were in excess of the 30 mg/L limit in the licence on 15 days in February. The cause for the high values is unknown. As indicated in earlier monitoring submissions, the cBOD5 and TOC results have been consistently low, and through testing we have shown that these high results may be due to nitrification occurring. The BOD5 average result for February did not meet the limit set in the licence.

3. We are pleased to report that during the month of February the fecal coliform and E. coli results met the limits set in the licence.

Please note the following respecting the report for Licence #2716 R:

1. The TSS results met the limit set in the licence in February.

2. There were no results for BOD5 and cBOD5 on February 6 due to a quality control failure. The BOD5 results met the limit set in the licence in February.

3. We are pleased to report that during the month of February the fecal coliform and E. coli results met the limits set in the licence.

As mentioned in previous submissions, the City has requested that the Province change the present “daily not to exceed” BOD5 and TSS limits in the licences to monthly or running 30 day average limits. This request is under consideration by Manitoba Conservation.

The city has also requested that the Province eliminate the BOD5 test. This test is not a valid test procedure for final effluent and should not be used for compliance assessment purposes. It is important to recognize that under certain conditions, the City of Winnipeg’s wastewater treatment plants experience nitrifying activity. Under such conditions the BOD5 will continue to exceed the limits from time to time. The City has requested that the BOD5 test be replaced with the carbonaceous BOD5 test.

Please let me know of any concerns or questions respecting this submission. I may be reached at the below address, by telephone at 986-4807 or by email at kkjartanson@winnipeg.ca.

Thanks for your ongoing cooperation and understanding in this matter.

Yours sincerely,
